

# RUGGED, REDUNDANT & SHORT DEPTH SERVER

## FRONT

## BACK

Mendax Microsystems introduces a new 1U redundant, short depth rugged server platform.

With reliability and serviceability as key design factors, the Mendax ShortServ 1020R platform is designed to ensure 100% uptime with a very low mean time between failures.

Industrial strength components give this server the capability to outlast any other machine of its class on the market today. **Redundant** power supplies and mirrored hard drives give it great failover capabilities. **Hot swap** components allow repairs to be

performed without process interruption and built in spares offer onsite platform servicing.

The Mendax ShortServ 1020R comes with a front dust filter, reinforcement front panel, internal stabilizing bars and shock absorbent hard drive caddies perfect for field and space conscious applications.

Portability is also a design feature with the ShortServ 1020R – with only **15.5" in depth** and a standard **1U (1RU)** height, this rugged rackmount platform can easily fit into a small shipping case for ultimate portability.

## Standard Specifications

- Intel Core 2 Duo
- Dual GBit NICs
- Redundant Power Supplies
- Hot Swap Hard Drives
- PCI x8 Expansion slot
- Rear RS232 port

## 1020R

- Dual front USB Ports

## 1020R - LCD

- LCD control panel

## Rugged Shipping Case
