

AVG

Funding global expansion.

More than 68 million users worldwide depend on AVG Anti-Virus software to protect their computers and networks. Founded in 1991, AVG (formerly Grisoft) has grown in lockstep with the demand for better security solutions. AVG Anti-Virus and other security related products are distributed globally through the Internet and AVG's network of resellers, distributors and retailers. The product line supports all major operating systems and platforms. The company continues to evolve its software solutions to deliver the most comprehensive and proactive protection on the market today for consumers and business. As a result, in recent years AVG's growth has dramatically outpaced that of the market.

"Over the course of the last year, Intel has added significant value to our business by introducing AVG to potential business and technology partners, as well as by providing sound feedback and guidance with respect to managed growth, scalability of the business and market trends. Intel has a very open door policy and makes it very apparent that they will assist whenever and however they can."

J.R. Smith, CEO

Quick Facts

Industry: Software

Products: Anti-virus, anti-spy, anti-phishing, anti-spam, firewall, and anti-crimeware software solutions for business and consumers

Founded: 1991

Headquarters: Orlando, Florida; Amsterdam, Netherlands; and Brno, Czech Republic

Intel Capital Investment: 2005

Highlights:

- AVG attended eight Intel Capital Technology Days
- The company participated in two Intel Capital CEO Summits

The Investment

Intel Capital's 2005 investment in AVG is, to date, our largest investment in Central and Eastern Europe. As a co-leading investor at a critical point in AVG's expansion, Intel Capital has facilitated the company's dramatic international growth among both consumers and business.

The Intel Capital Advantage

As part of the Intel Capital portfolio, AVG has benefited from the opportunity to work closely with Intel staff and resources to optimize the company's products on Intel® technology. Specifically, AVG has collaborated with Intel on using virtualization technology and Intel® XDBit technologies to enhance capabilities for their business users.

AVG has also participated actively in a number of networking opportunities made available through their relationship with Intel Capital. The company has been involved in eight Intel Capital Technology Days and other management events with very positive results. As an attendee at the Intel Channel Conference, AVG was also able to connect with distributors and OEMs to expand distribution opportunities for its anti-virus products.

From a corporate standpoint, AVG has also gained advantage from its relationship with Intel Capital. With access to best practices insight related to corporate governance and management of growth, AVG has used this learning from Intel and Intel Capital to prepare for future growth and development.
