

Go On: ND2012

30-31 May 2012

Old Billingsgate

London

The 7th National Digital Conference is here!

Join us in exploring the policy, leadership, innovation and collective action needed to support a truly digital nation.

Supported by Intel, Race Online 2012, Online Centres Foundation, the BBC, Government Departments and leading technology businesses, the conference will explore the latest digital policy to support growth and enterprise in the UK, as well as driving innovation in public services.

Talks at Go On: ND2012 will explore how new innovations and solutions can drive UK business growth, the emergence of 'Super Cities with Superfast Broadband' and the need to ensure that both business and the public are able to take advantage of new digital technologies.

The event will place focus on informing those from the private, public and third sectors about the opportunities and challenges associated with operation in an increasingly digital economy, as well as sharing best practice and success stories too.

Amongst many topics being discussed, the conference will provide a timely opportunity to evaluate the implications of superfast broadband roll-out for the UK, as announced in the 2012 Budget. Through networking and high-level discussion, there will be an opportunity to explore how best take advantage of this new infrastructure, including through the increased use of cloud computing or ensuring that every organisation has the necessary IT in place.

Attending Go On ND:2012 represents a chance to see just how pioneering computing frameworks, logistics and guidance, as showcased within [Intel IT Center](#), can play a significant role in helping to digitally equip the UK.

The organisers of Go On: ND2012 are not charging for the event; however, registration requires a donation of £20 to AbilityNet.

Visit us at the conference and talk to our Experts!
