

*ICURO's role in innovating and deploying AI platforms to enable a dynamic and advanced semiconductor manufacturing has delivered significant value to the entire ecosystem."*

CTO, Semiconductor Manufacturing Company

The no-code AI vision platform with a user-friendly visual builder provides precision analysis and measurement of desirable features in silicon. It is a self-learning AI system embedded in the manufacturing process to deliver extreme high precision and accuracy by eliminating manual steps at every stage of the silicon manufacturing innovation process.

The platform empowers the lab technicians, quality engineers, and production managers with a rapid inline visual analysis and active feedback system to advance yield improvements.

## Semiconductor Manufacturing AI Vision Platform

Accelerating Yield Improvements in Silicon to Chip Production

Key Features

No-code, User-friendly Visual Builder

End-to-End Pipeline Automation

Ready-to-deploy Extensible Models

**Verticals:**

- High Tech
- Manufacturing
- Communications

**Use Cases:**

- Product Manufacturing
- Product Inspection

**Country/Geo:**

North America (United States and Canada)
