

Visual Ranking App

What is it?

Visual Ranking is our most popular tool where students show their thinking when they prioritize items in an ordered list. They use visual diagrams to explain their reasoning and compare their work with other student teams. The student Visual Ranking app is a companion tool to the online tool.

Synopsis of scenarios:

Evan is on a team with 4 other students and they are working on a social studies project and debating which inventions have had the greatest impact on people's lives. They know the printing press was an important invention but can't remember who invented it and what exactly it did.

Evan volunteers to research it after school. On the bus Evan uses his smart phone to search for answers. He learns that with the printing press we can now keep records and have a written history which helps us better understand our past. He thinks it was important but maybe not the most important invention. He logs into the project on his smart phone and creates a comment with the information he has gathered. After saving, he texts his other classmates letting them know he updated the project.

The next day at school, the team discusses other inventions.

Who is the Audience?

K12 students facilitated by a teacher

How do you get it?

This will be available for download for Intel AppUp, Android and iOS phones and tablets
