

PASCO

Global leader in 21st century science education

PASCO is engaged with states and countries around the world in supporting transformative science education programs, from Peru to Kazakhstan to Oman and beyond. For 50 years, the PASCO name has been recognized for innovation and quality in K-14 inquiry-based science education.

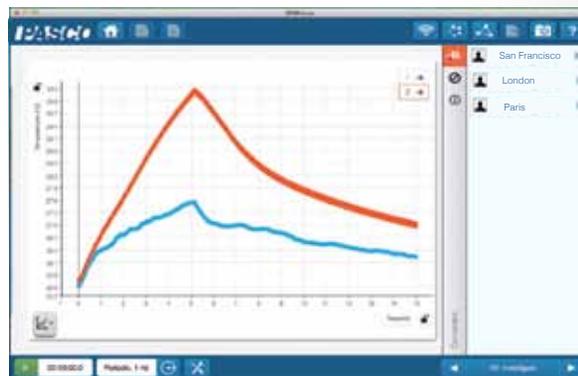

PASCO's SPARKscience solution, featuring SPARKvue® software, offers teachers and students a common user experience on all devices; which means simpler classroom management and more time for learning.

The platforms - PASCO's award-winning SPARKscience solution brings a powerful sensor-based science learning environment to almost any computing platform deployed in schools. Whatever your technology mix today or tomorrow, you can be confident that your investment in PASCO is a secure one.

The Application - SPARKvue is an award-winning science learning application that combines rich standards-based content, data collection, visualization, analysis, and assessment into one seamless environment. New datasharing features enhance instruction and promote real-time collaboration across multiple platforms and devices.

The data collection - With over 70 PASPORT Pure Digital sensors to choose from, you can measure everything from force and motion to temperature, sound, and light. PASCO's USB and Bluetooth® interfaces allow you to connect our sensors and collect data, regardless of your platform or devices. When your students use PASPORT sensors, they can collect real-world data and "see the invisible."
