## **Acknowledgements ix**

## **Chapter 1 Introduction 1**

- What Are the Intel® Integrated Performance Primitives? 2
  - A Broad Multimedia and Computational Library (“Integrated”) 2
  - A Software Optimization Layer (“Performance”) 3
  - An Extensive Set of Low-Level Operations (“Primitives”) 4
  - A Cross-Platform API 5
- Why This Book? 6
  - Who’s the Reader? 6
  - What are the Contents? 7
  - CD-ROM 8

## **Chapter 2 Using Intel® Integrated Performance Primitives (Intel® IPP) 9**

- Linkage Options Overview 9
- Dynamic Linkage 13
  - Usage 14
  - Distribution 15
- Static Linkage with Dispatching 15
  - Usage 17
  - Distribution 18
- Custom Dynamic Linkage 19
  - Usage 20
  - Distribution 22
- Static Linkage Without Dispatching 22
  - Usage 24
  - Distribution 25
- Linkage Model Comparison 26
  - Linkage Features Summary 27

## **Chapter 3 Architecture and Interface 31**

- The Three Input Types 31
- Fundamental Data Types 33
- Signals and Arrays 34
- Images 36
- Matrices 40
  - Objects 40
  - Sizes 41
  - Descriptors 41
- Core Functions 44
- Domains 44
- Multi-step Operations 45
  - Init Sequence 46
  - InitAlloc Sequence 47
- Return Values 48
- Arguments 50
- Structures 51
  - Fundamental Type Structures 51
  - Basic Structures 51
  - Multi-step Operation Structures 52

## **Chapter 4 Basic Techniques 53**

- Measuring Performance with `CoreGetCpuClocks` 54
- Copying Data 56
- Converting Types and Layouts 58
  - Converting Data Types with `Convert` 58
  - Rearranging Data with `Real`, `Imag`, `RealToCplx` and `CplxToReal` 60
- Initializing Arrays 62
  - Initializing One-Dimensional Arrays with `ippsVectorRamp` 63
  - Initializing Two-dimensional Arrays with `ippiImageRamp` 65
- Removing Loops and Branches 65
  - Removing Branches with `Threshold` 66
  - Removing Loops with Compare and Logical Operations 71
  - Removing Loops with Compare and Copy with Mask 74
- Performing Arithmetic Efficiently 76
  - Performing Arithmetic Between Integers and Floating Point Values with `AddWeighted` and `AddProduct` 76

Performing Linear Combinations of Two Sources with Alpha  
Composition 77

Performing Linear Combinations of Three Sources with  
`ColorToGray` and `ColorTwist` 79

Optimizing Table-Based Functions Using a Look-Up Table 80

Further Reading 83

## **Chapter 5 Digital Filtering 85**

A Quick Course in Filtering 85

The Idea of Filters 86

The Frequency Domain and Fourier Transforms 90

Fourier Transform Properties 95

Filtering in the Frequency Domain 97

Time-Domain Filters 97

Filtering in Intel IPP 102

Signal Generation 103

Frequency Domain Filtering 104

Time Domain Filtering 114

Other Topics 131

Infinite Impulse Response Filters 131

Windowing 131

Filter Design 134

Nonlinear Filters 134

Further Reading 135

## **Chapter 6 Audio Processing 137**

Audio sources 137

Generating Audio 137

Wave Audio 143

Audio Analysis 146

Phase and Shift 146

The Short-Time Fourier Transform 150

Spectral Analysis 153

Goertzel Transform 155

Cepstrum 157

- Audio Manipulation 163
  - Echoes with Infinite Impulse Response Filters 164
  - Resampling with Multi-Rate FIR 166
  - Spectral Manipulation 171
  - Signal Stretching 174
  - Faux Stereo 176
- Further Reading 180

## **Chapter 7 Audio Coding 181**

- Audio Coding Basics 181
- MP3 183
  - MP3 Codec Components 183
  - MP3 in Intel® Integrated Performance Primitives (Intel® IPP) 188
- AAC 198
  - AAC vs. MP3 199
  - Profiles 199
  - Implementing AAC 199
- Other Topics 206
- Further Reading 206

## **Chapter 8 Image Processing 207**

- Images in Intel® Integrated Performance Primitives (Intel® IPP) 207
  - Image Definition and Rectangle of Interest 208
  - Allocation, Initialization, and Copying 211
- Image Objects 214
  - The `Image8u` Object 215
  - The `ROI` Class 223
  - The `Mask` Class 225

## **Chapter 9 Image Filtering and Manipulation 233**

- Image Filtering 233
  - Rectangles of Interest and Borders 234
  - `Filter` Class 239
  - Filters and Tiling 248
  - General Filters 249
  - Fixed Filters 254
  - Convolution 259
  - Other Filter Functions 263

Geometric Transforms	265
Geometric Transform Conventions	265
Resizing	269
Rotation	273
Affine Transform	281
Geometric Transforms and Tiling	288
Other Transforms in Intel® Integrated Performance Primitives (Intel® IPP)	291
Further Reading	293

## **Chapter 10 JPEG and MPEG 295**

Overview of Coding	295
Coding in Intel® Integrated Performance Primitives (Intel® IPP)	297
JPEG	297
JPEG Codec Components	298
JPEG in Intel IPP	302
Independent JPEG Group Library	308
JPEG sample	319
JPEG 2000	324
JPEG 2000 Codec Components	324
JPEG 2000 in Intel IPP	328
JPEG 2000 sample	329
MPEG-2	333
MPEG-2 Components	333
MPEG-2 in Intel IPP	337
Other Topics	344
Further Reading	344

## **Chapter 11 Graphics and Physics 345**

Background	346
Geometry for Graphics and Physics	346
3DS structure and 3DS object	348
3DS OpenGL Viewer	351
Object Viewer Application	355
Programming Methodology	356
Geometry	362
Transforming the Model	362
Projection	364
Drawing in the View	368

- Ray Tracing 368
  - Calculating the Plane Equation 369
  - Pre-calculating the Planes for Each Side of the Triangle 376
  - Intersecting a Ray and a Plane 381
  - Determining Whether a Point is Inside a Triangle 382
- Physics 385
  - Calculating Center of Mass 385
  - Line Segment-Triangle Intersection 392
  - Triangle-Triangle Intersection 394
- Further Reading 397

## **Chapter 12 Special-Purpose Domains 399**

- Strings 399
  - C Strings 401
  - C++ Standard Template Library Strings 403
  - MFC Strings 405
- Cryptography 408
  - Big Numbers 408
  - Public-Key Cryptography 411
  - Other Cryptographic Support in Intel® Integrated Performance Primitives (Intel® IPP) 416
- Computer Vision 416
  - Edge Detection 417
  - Multi-resolution Analysis 420
  - Template Matching 424
- Further Reading 430
