

Enterprise server power designed for a small business.

The Business Challenge

Your business depends on computers—but you may be hitting the limits of desktop-only computing. Are critical files locked on one PC, where they're difficult for others to access and vulnerable to loss or damage? Would the failure of one critical PC cripple your business? Do your employees need secure access to information from home or the road? Eager to take advantage of more sophisticated business applications? You may be ready to add the power of a server to your business. For first-time server buyers, selecting the right hardware and software is a top concern.
