

STREAMED CLOUD GAMING SOLUTION: MOBILE & PC GAMING

Evan Zou (Tencent), Xinda Zhao (Tencent), Zhihong Yu (Intel)

Speakers

Evan Zou:

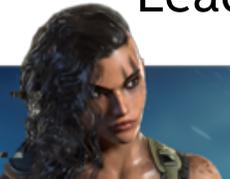

- Director, Tencent Instant Play
- Director of Business Planning, NEXT Studios, Tencent Games
- Director of Game Platform Solutions, Tencent Games

Xinda Zhao:

- Senior developer, Tencent CMatrix platform
- Senior developer on Android Cloud Gaming solution in Tencent WeTest

Zhihong (George) Yu:

- Solution Architect in Intel Visual Cloud Division in DCG/NPG
- Lead architect on cloud gaming solutions with Tencent

@IntelSoftware

@IntelGraphics

Agenda

- Intel Products for Cloud Gaming
- PC Cloud Gaming by Tencent Instant Play
- Android Cloud Gaming by Tencent CMatrix platform

@IntelSoftware

@IntelGraphics

CLOUD GAMING: A FAST-EVOLVING ECOSYSTEM

Streamed frames, files or commands from cloud/edge to device.

- Technology has evolved reducing latency enabling subscription models
- End user pays monthly fee and can access a catalog of games or ones they have purchased
- Several business models out there to deal with content ownership
- Lots of data, with different ways to manage latency/BW constraints.

#1B business in 2017, projected to grow at 26%

- Examples of cloud gaming services: Gamestream, PlayGiga, Tencent utilizing scalable Intel cloud platforms
- Intel and Tencent NEXT Studios and WeTest work together to make high-quality cloud game dreams come true across many devices:
 - https://mp.weixin.qq.com/s/ZDP-PGmXOs3Rn_UcEaC_AA
 - <https://cloud.tencent.com/developer/article/1398289>
- PlayGiga moving to KBL-G for scale
<https://www.accesswire.com/viewarticle.aspx?id=513153>
- Gamestream evolving on KBL-G
<https://itpeernetwork.intel.com/gamestream-intel-cloud-gaming-telecom/>
- Strong positions being taken by Microsoft, AWS and ISVs

@IntelSoftware

@IntelGraphics

INTEL CLOUD GAMING ARCHITECTURE: VCA2 AIC, KBL-G AIC & PC FARM

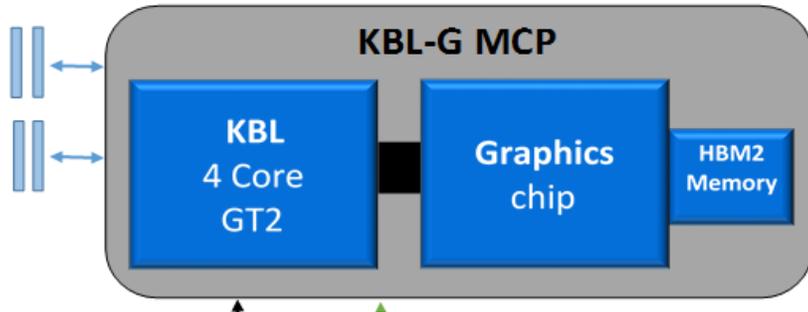

Two GPU design - Radeon VEGA graphics with 4GB HBM memory and integrated GT2 graphics

OEM Ecosystem

- KBL-G PC Farm – 8x nodes in 2U Form Factor, low cost custom designed server
- Artesyn Maxcore Gamestreamer – High dense server in a 3U Form Factor (16x KBL-G)
- KBL-G PCIe Add-in-Card -- 2x nodes in standard PCIe card

DDR4 2DPC

VCA2

PC Farm

Artesyn Gamestreamer

Intel Cloud Rendering Add-In-Card

High density Android Cloud Gaming AIC

Intel® Xeon® Processor

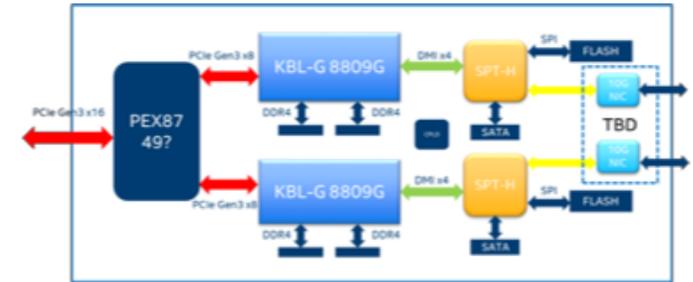

VCA2 PCI-e add-in card

High density graphics rendering AIC for PC games

Intel® Xeon Processor

PCI-e add-in card
2 x Intel Core I7-8709G (KBL-G)

Value Proposition

- Balanced rendering & encoding for high-density Android cloud gaming
 - 3x Intel Xeon E3 with Intel integrated GPU
 - Multiple Android game instances per card
 - High-density and low-latency H.264, H.265 encoding
- Target usage cases:
 - Android Cloud Gaming
 - Virtual desktop (VDI)

Value Proposition

- High performance rendering and encoding accelerator
 - Multiple windows games per PCIe card
 - High 3D performance at competitive TCO
 - Low-latency rendering and encoding capability
- Target usage cases:
 - Cloud gaming, cloud graphics
 - Virtual desktop
 - Cloud VR

Embrace 5G with Cloud Gaming

Evan Zou

Speaker's Background

Evan Zou

- Director, Tencent Instant Play
- Director of Business Planning, NEXT Studios, Tencent Games
- Director of Game Platform Solutions, Tencent Games

Agenda

- What is Cloud Gaming and what are the benefits of Cloud Gaming
- Introducing Tencent Instant Play
- Advice for game developers

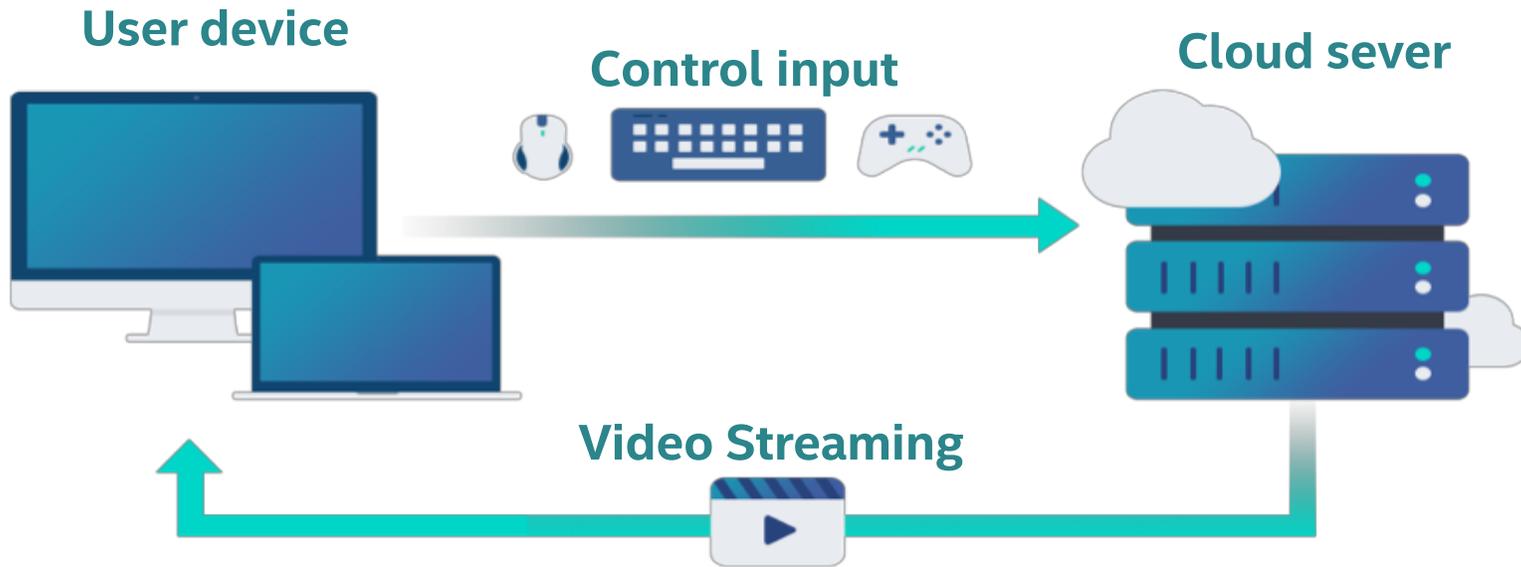

@IntelSoftware

@IntelGraphics

What is Cloud Gaming

No need for local premium graphics

Cross-device compatibility

Play anywhere, anytime

@IntelSoftware

@IntelGraphics

What are the Benefits of Cloud Gaming

Trends and Pain Points

Benefits of Cloud Gaming

Distributor

- Trends: hardware requirement to play 3A games is increasing
- Pain point : the high-end user base is limited

- **No need for local premium graphics**
- Attract more gamers to premium games

Developer

- Trends : Emergence of highly popular cross-platform games
- Pain point : Difficult to develop games for different devices

- **Compatible with various devices**
- Testing for games become easier

Gamer

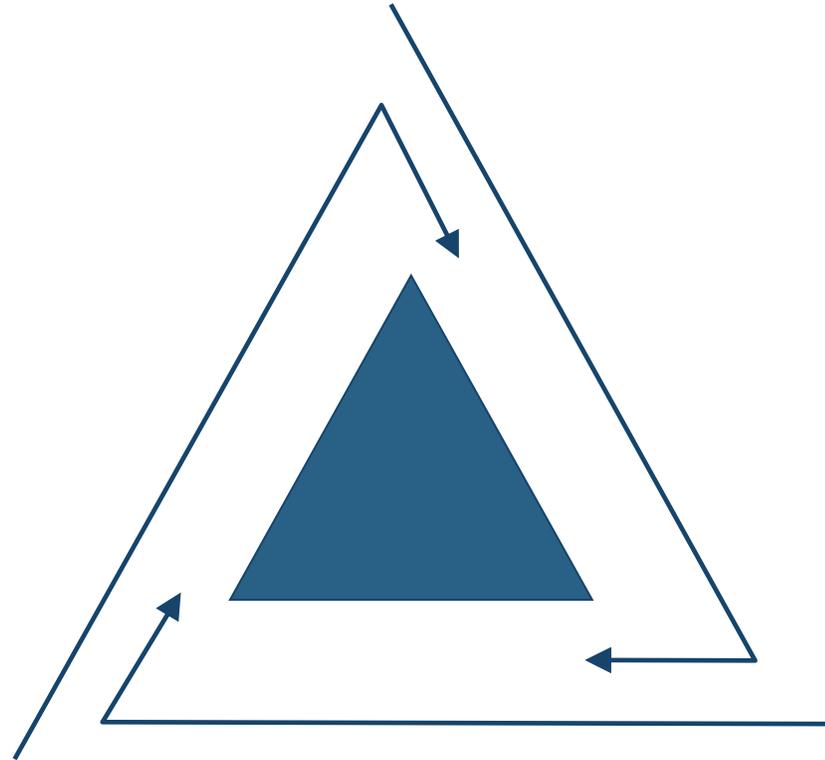

- Trends : Leisure time are becoming more fragmented and users spend more time on mobile devices
- Pain point : Most AAA and high quality games are still being developed for specific devices such as console

- **Play anywhere, anytime**
- No need to download games before playing

Why we believe Cloud Gaming is coming

- **Server solutions getting more mature and cost-effective**

- **Telecommunication Infrastructure improving**

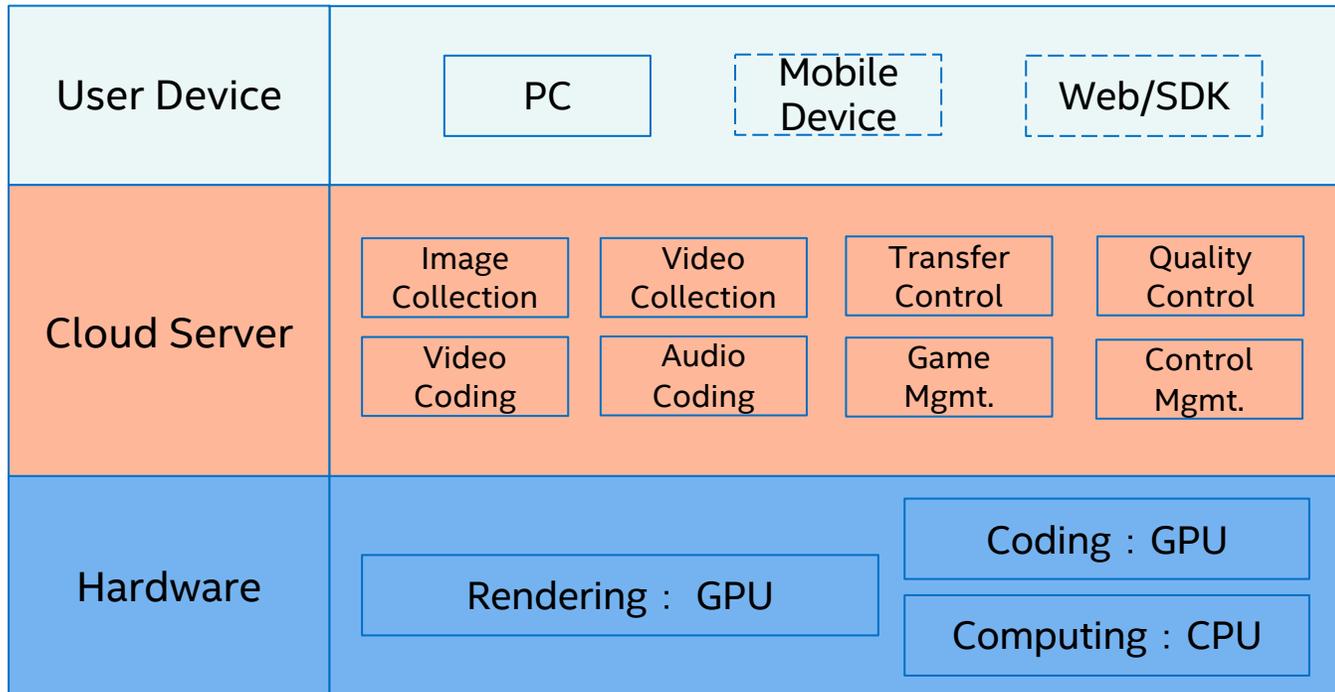

- **Collaboration and Investments increasing**

Introduction of Tencent Instant Play

- Continuous research and development of streaming technology for better gaming experience
- Proactively support the growth of cloud gaming industry and related ecosystem
- Actively explore Cloud Gaming business model

Product Architecture

Current Performance Level (lab environment)

FPS : **60**

Latency : **40ms**

Resolution : **1920*1080**

Cloud Gaming Product Demonstration

Bladed Fury (Next Studios)

Traditional PC
(Core i7+Geforce 1060)

@IntelSoftware

@IntelGraphics

Advice for Game Developers

- Create innovative gameplay tailored specifically cloud gaming experiences
- Be open to explore new distribution business models such as subscription model
- Technology aside, quality content is still the king

@IntelSoftware

@IntelGraphics

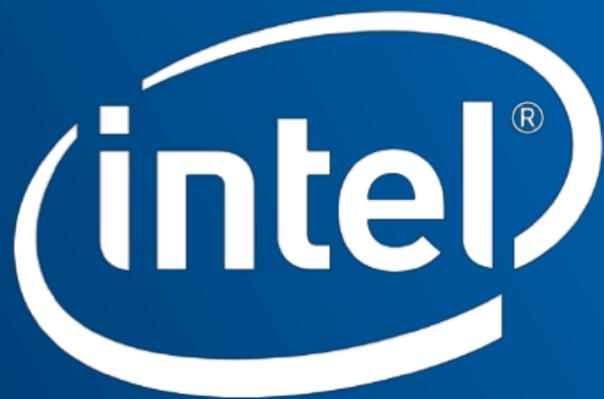

**The future is near, we look forward
to the journey to explore together**

What is Android Cloud Gaming

A relatively new way of playing **Android** games that takes advantage of the power of **Servers**.

Through your browser or app, on TV, computer or phone - **Anywhere!**

MORE CHOICE

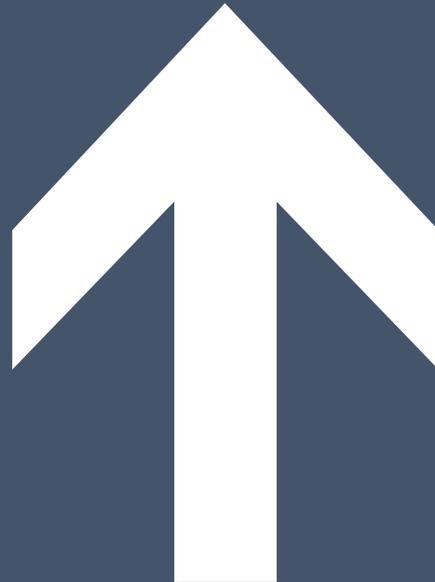

Easier to experience more games on the same mobile phone

MORE

GAME TRIAL EXPERIENCE

Opportunity to experience games that are not officially released

24x7 ONLINE

An option for game developers who need their game to be online 24 hours a day

NO GAME PLUG-IN
Guarantee the
fairness of the game

**LESS TIME
CONSUMPTION**
The server will upgrade
the game in time

LESS

**REDUCTION OF
ANDROID FRAGMENTATION**
Less difficulty in adapting

LOW HARDWARE REQUIREMENT
Less storage space
Less GPU performance requirement

Looking Forward to the Future

Innovative design of **new games** based on the **cloud gaming model** will come into being and far beyond your imagination !
