

Full Transcoding Sample

Overview

Full Transcoding Sample works with **Intel® Media Server Studio 2015 for Linux**.

It demonstrates how to use **Media Server Studio – SDK** (hereinafter referred to as "**SDK**") API to build an advanced transcoding pipeline including video and audio decoders and encoders, **Splitter and Muxer Sample** components, with support of multiple audio tracks.

Features

Full Transcoding Sample supports the following video formats:

Format type	
input	Container: MPEG4 Part 14 (MP4), MPEG-2 Transport Stream (M2TS) Video codec: H264, MPEG2 Audio codec: AAC, MPEG1 layer 3 (MP3)
output	Container: MPEG4 Part 14 (MP4), MPEG-2 Transport Stream (M2TS) Video codec: H264 Audio codec: AAC

Hardware Requirements

See <install-folder>\Media Samples Guide.pdf.

Software Requirements

See <install-folder>\Media Samples Guide.pdf.

How to Build the Application

See <install-folder>\Media Samples Guide.pdf.

Running the Software

See <install-folder>\Media Samples Guide.pdf.

The executable file requires the following command-line switches to function properly:

-i <Input File>	Input file must be a container with supported format.
-----------------	---

-o <Output File>	Output file will be a container (MP4 or M2TS).
------------------	--

The following command-line switches are optional:

-hw	Use hardware video library (default).
-sw	Use software implementation of video library (if available).
-?	Print help
-vcodec h264	Video codec to use for encoding.
-acodec:copy	Copy audio without transcoding.
-async	Asynchronous depth of video pipeline.
-format mp4 m2ts	Container format in case of unknown output file extension.
-v:b	Bitrate of the encoded video stream in Kbits/second.
-a:b	Bitrate of the encoded audio stream in Kbits/second.
-trace_level silent critical error warning info debug	Set application tracing level.
-loop <time>	Transcoding in loop, during <time> in seconds.

Additionally to process audio from input container the sample uses **Audio for Windows or Intel® Media Server Studio Audio Decoder & Encoder**. If the audio library is not installed, you can specify `-acodec:copy` to copy audio without transcoding, otherwise the output container will be with no audio.

Below are examples of a command-line to execute **Full Transcoding Sample**:

```
-i in.m2ts -o out.mp4 -v:b 1000 -a:b 16 -hw
-i in.mp4 -o out.m2ts -v:b 2000 -a:b 62 -hw
-i in.mp4 -o out.abc -v:b 2000 -a:b 52 -format m2ts -hw
```

Tips

1. Option “-format” can be unspecified if known file extensions for output file is used (mp4, m2ts)
2. VA-API video memory allocator is used by default with ‘-hw’ option.

Known Limitations

- Audio and video timestamps in output stream can slightly differ from those in input stream.
- -audiocopy feature is not fully working.
- The sample doesn’t process pure audio and video streams (without a container).
- Setting the stream position after transcoding may not work correctly now, because the `GopPicSize`, `GopRefDist` and `IdrInterval` fields of `mfxVideoParam` is not set. To fix this, modify the `voidTransform <MFXVideoENCODE>::Configure(MFXAVParams& param, ITransform`

*) function in `transform_venc.cpp` (here is just an example of `GopPicSize`, `GopRefDist` and `IdrInterval`):

```
void Transform <MFXVideoENCODE>::Configure(MFXAVParams& param, ITransform
*) {
    m_initVideoParam = param;
    m_initVideoParam.mfx.GopPicSize = 30;
    m_initVideoParam.mfx.GopRefDist = 3;
    m_initVideoParam.mfx.IdrInterval = 0;
}
```

Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel.

Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.
