If an FCC declaration of conformity marking is present on the board, the following statement applies:

**FCC Declaration of Conformity**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For questions related to the EMC performance of this product, contact:

Intel Corporation, 5200 N.E. Elam Young Parkway, Hillsboro, OR 97124
1-800-628-8686

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit other than the one to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications to the equipment not expressly approved by Intel Corporation could void the user’s authority to operate the equipment.

Tested to comply with FCC standards for home or office use.

**Canadian Department of Communications Compliance Statement**

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numerique német pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

**Disclaimer**

Preface

This Product Guide gives information about board layout, component installation, BIOS update, and regulatory requirements for Intel® Desktop Board DG41MJ.

Intended Audience

The Product Guide is intended for technically qualified personnel. It is not intended for general audiences.

Use Only for Intended Applications

All Intel Desktop Boards are evaluated as Information Technology Equipment (I.T.E.) for use in personal computers (PC) for installation in homes, offices, schools, computer rooms, and similar locations. The suitability of this product for other PC or embedded non-PC applications or other environments, such as medical, industrial, alarm systems, test equipment, etc. may not be supported without further evaluation by Intel.

Document Organization

The chapters in this Product Guide are arranged as follows:
1 Desktop Board Features: a summary of product features
2 Installing and Replacing Desktop Board Components: instructions on how to install the Desktop Board and other hardware components
3 Updating the BIOS: instructions on how to update the BIOS
A Error Messages and Indicators: information about BIOS error messages and beep codes
B Regulatory Compliance: information about safety standards, EMC regulations, and product certifications
Conventions

The following conventions are used in this manual:

⚠️ **CAUTION**

_Cautions warn the user about how to prevent damage to hardware or loss of data._

🔍 **NOTE**

_Notes call attention to important information._

Terminology

The table below gives descriptions of some common terms used in the product guide.

1 Desktop Board Features

This chapter briefly describes the features of Intel® Desktop Board DG41MJ. Table 1 summarizes the major features of the Desktop Board.

<table>
<thead>
<tr>
<th>Table 1. Feature Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Form Factor</strong></td>
</tr>
<tr>
<td><strong>Processor</strong></td>
</tr>
</tbody>
</table>
| **Main Memory**          | • Two 240-pin, DDR2 SDRAM Dual Inline Memory Module (DIMM) sockets  
                          | • 800/667 MHz single or dual channel DDR2 SDRAM interface  
                          | • Support for up to 8 GB of system memory |
| **Chipset**              | Intel® G41 Express Chipset consisting of:  
                          | • Intel G41 Express Chipset Graphics and Memory Controller Hub (GMCH) with Intel® Graphics Media Accelerator X4500 (Intel® GMA X4500)  
                          | • Intel® 82801GB I/O Controller Hub (ICH7) |
| **Graphics**             | • Intel G41 Express Chipset Graphics and Memory Controller Hub (GMCH)  
                          | • Integrated graphics (Intel® GMA X4500) with VGA and DVI-D outputs  
                          | • One PCI* bus connector supporting PCI graphics cards |
| **Audio**                | • 5.1 channel in single-stream mode or 4 + 2 channel in multi-streaming mode, featuring:  
                          | – Realtek* ALC888VC audio codec  
                          | – Support for Intel® High Definition Audio (Intel® HD Audio) and AC ’97 Audio |
| **LAN Support**          | Realtek 8111D Gigabit Ethernet Controller for operation at 10/100/1000 Mb/s |
| **Expansion Capabilities** | • One PCI bus connector |
| **Peripheral Interfaces** | • Up to eight USB 2.0 ports:  
                          | – Four ports routed to the back panel  
                          | – Four ports routed to two USB headers  
                          | • Three Serial ATA (SATA) channels (3.0 Gb/s) via ICH7  
                          | • One serial port header  
                          | • PS/2* keyboard port on the back panel |

Processor

CAUTION

Failure to use an appropriate power supply and/or not connecting the 12 V (2 x 2 pin) power connector to the Desktop Board may result in damage to the board, or the system may not function properly.

Intel Desktop Board DG41MJ supports an Intel processor in the LGA775 package. Processors are not included with the Desktop Board and must be purchased separately. The processor connects to the Desktop Board through the LGA775 socket (Figure 1, G).

For instructions on installing a processor, refer to page 27 in Chapter 2.
Main Memory

NOTE
To be fully compliant with all applicable Intel® SDRAM memory specifications, the board should be populated with DIMMs that support the Serial Presence Detect (SPD) data structure. If your memory modules do not support SPD, you will see a notification to this effect on the screen at power up. The BIOS will attempt to configure the memory controller for normal operation.

The Desktop Board has two DIMM sockets that support the memory features listed below:

• DDR2 SDRAM DIMMs with the option in the BIOS setup to raise the voltage to support higher performance DDR2 SDRAM DIMMs
• Support for:
  — Non-ECC DDR2 800/667 MHz memory
  — Serial Presence Detect (SPD) memory only
  — Unbuffered, non-registered single- or double-sided DIMMs
  — Memory configurations listed below:
    • Up to 2.0 GB utilizing 256 Mb technology
    • Up to 8.0 GB utilizing 512 Mb or 1 Gb technology
• A minimum of 512 MB of total memory is required

NOTE
System resources and hardware require physical memory address locations that can reduce available addressable system memory. This could result in a reduction of as much as 1 GB or more of physical addressable memory being available to the operating system and applications, depending on the system configuration and operating system.

For instructions on installing memory, refer to page 32 in Chapter 2.
Intel® G41 Express Chipset

The Intel G41 Express Chipset consists of the following devices:

- Intel G41 Express Chipset Graphics and Memory Controller Hub (GMCH) with Direct Media Interface (DMI)
- Intel 82801GB I/O Controller Hub (ICH7) with DMI

The GMCH component provides interfaces to the processor, memory, PCI, and the DMI interconnect. The component also provides integrated graphics capabilities supporting 3D, 2D, and display capabilities. ICH7 is a centralized controller for the board’s I/O paths.

Graphics Support

The Intel G41 Express Chipset supports two separate, mutually exclusive graphics options. Either the integrated Intel® Graphics Media Accelerator X4500 (Intel® GMA X4500) graphics controller is used or a PCI graphics add-in card can be used. When a PCI graphics add-in card is installed, the Intel GMA X4500 graphics controller is disabled.

The GMA X4500 graphics controller supports dual independent displays via the VGA and DVI-D connectors on the Desktop Board back panel.

Intel® GMA X4500 Graphics Controller

The Intel GMA X4500 graphics controller has the following features:

- Advanced graphics performance, including:
  - DirectX10.0* and OpenGL* 2.0 compliant
  - Shader Model 4.0 support
- Enhanced video playback support, including:
  - Software DVD at 30 fps full screen
  - Dynamic Video Memory Technology (DVMT) 5.0
- Advanced display support, including:
  - High Definition Content Protection (HDCP) version 1.1 support
  - Support for all HD display resolutions including 720p, 1080i, and 1080p
  - Support for digital and analog displays up to 2048 x 1536 at 75 Hz refresh rate (QXGA); also supports 1920 x 1080 resolution for full High Definition video playback quality

DVI Support

The DVI-D port supports digital DVI displays. The maximum supported resolution is 2048 x 1536 at 75 Hz (QXGA). The DVI port is compliant with the DVI 1.0 specification.
Audio Subsystem

The onboard audio subsystem consists of the following:
- Intel® ICH7
- Realtek ALC888VC audio codec
- Back panel audio connectors (see Figure 19)
- Front panel audio header supporting both Intel High Definition Audio and AC ’97 Audio (see Figure 18, A)

The audio subsystem supports the following features:
- A signal-to-noise (S/N) ratio of 95 dB
- Independent 5.1 audio playback from the back panel connectors and stereo playback from the Intel High Definition Audio front panel header

Table 3 lists the supported functions for the front panel and back panel audio jacks.

Legacy Input/Output (I/O) Controller

The Winbond 83627DHG-P legacy I/O controller provides the following functions:
- One serial port interface via an onboard header
- One parallel port
- Serial IRQ interface compatible with serialized IRQ support for PCI systems
- Intelligent power management, including a programmable wake up event interface
- PCI power management support
LAN Subsystem

The LAN subsystem includes:
- Intel ICH7
- Realtek 8111D-GR Gigabit Ethernet Controller for operation at 10/100/1000 Mb/s
- RJ-45 LAN connector with integrated status LEDs

The subsystem features:
- CSMA/CD protocol engine
- LAN connect interface between ICH7 and the LAN controller
- PCI bus power management

Two LEDs are built into the RJ-45 LAN connector located on the back panel (see Figure 2). These LEDs indicate the status of the LAN.

Table 4 describes the LED states when the board is powered up and the LAN subsystem is operating.

Figure 2. LAN Connector LEDs
USB 2.0 Support

The Desktop Board supports up to eight USB 2.0 ports (four ports routed to the back panel and four ports routed to two internal headers) via ICH7. USB 2.0 ports are backward compatible with USB 1.1 devices. USB 1.1 devices will function normally at USB 1.1 speeds.

USB 2.0 support requires both an operating system and drivers that fully support USB 2.0 transfer rates. Disabling Hi-Speed USB in the BIOS reverts all USB 2.0 ports to USB 1.1 operation. This may be required to accommodate operating systems that do not support USB 2.0.

Serial ATA

The Desktop Board supports three Serial ATA channels (3.0 Gb/s) via ICH7, connecting one device per channel.

Expandability

For system expansion, the Desktop Board includes one PCI bus connector.

BIOS

The BIOS provides the Power-On Self-Test (POST), the BIOS Setup program, the PCI and IDE auto-configuration utilities, and the video BIOS. The BIOS is stored in the Serial Peripheral Interface (SPI) Flash component.

The BIOS can be updated by following the instructions on page 53 in Chapter 3.

Serial ATA and IDE Auto Configuration

If you install a Serial ATA or IDE device (such as a hard drive) in your computer, the auto-configuration utility in the BIOS automatically detects and configures the device for your computer. You do not need to run the BIOS Setup program after installing a Serial ATA or IDE device. You can override the auto-configuration options by specifying manual configuration in the BIOS Setup program.

PCI* Auto Configuration

If you install a PCI add-in card in your computer, the PCI auto-configuration utility in the BIOS automatically detects and configures the resources (IRQs, DMA channels, and I/O space) for that add-in card. You do not need to run the BIOS Setup program after you install a PCI add-in card.
Security Passwords

The BIOS includes security features that restrict whether the BIOS Setup program can be accessed and who can boot the computer. A supervisor password and a user password can be set for the BIOS Setup and for booting the computer, with the following restrictions:

- The supervisor password gives unrestricted access to view and change all Setup options. If only the supervisor password is set, pressing <Enter> at the password prompt of Setup gives the user restricted access to Setup.
- If both the supervisor and user passwords are set, you must enter either the supervisor password or the user password to access Setup. Setup options are then available for viewing and changing depending on whether the supervisor or user password was entered.
- Setting a user password restricts who can boot the computer. The password prompt is displayed before the computer is booted. If only the supervisor password is set, the computer boots without asking for a password. If both passwords are set, you can enter either password to boot the computer.

For instructions on resetting the password, see Clearing Passwords on page 46.

Hardware Management Features

The hardware management features of Intel Desktop Board DG41MJ enable the board to be compatible with the Wired for Management (WfM) specification. The board has several hardware management features including the following:

- Fan speed monitoring and control
- Thermal and voltage monitoring

Hardware Monitoring and Fan Speed Control

Features of the board’s hardware monitoring and fan speed control include:

- Monitoring of power supply voltages to detect levels above and below acceptable values.
- Smart fan control provided by the legacy I/O controller, delivering acoustically-optimized thermal management. Fan speed controllers and sensors are integrated into the legacy I/O controller.
- Thermally monitored closed-loop fan control, for onboard fans, that can adjust fan speed according to thermal conditions.
- Two thermal sensors (processor and a remote thermal sensor).
Power Management Features

Power management is implemented at several levels, including:

- Software support through the Advanced Configuration and Power Interface (ACPI)
- Hardware support:
  - Power connectors
  - Fan headers
  - LAN wake capabilities
  - Instantly Available PC technology (Suspend to RAM)
  - +5 V standby power indicator LED
  - Wake from USB
  - Power Management Event signal (PME#) wake-up support
  - Wake from PS/2 devices
  - Wake from serial port
- ENERGY STAR capable

ACPI

ACPI gives the operating system direct control over the power management and Plug and Play functions of a computer. The use of ACPI with the Desktop Board requires an operating system that provides full ACPI support.

Hardware Support

Power Connectors

ATX12V-compliant power supplies can turn off the computer power through system control. When an ACPI-enabled computer receives the correct command, the power supply removes all non-standby voltages.

When resuming from an AC power failure, the computer returns to the power state it was in before power was interrupted (either on or off). The computer’s response can be set by using the Last Power State feature in the BIOS Setup program’s Boot menu.

The Desktop Board has two power connectors. See Figure 21 on page 44 for the location of the power connectors.
Fan Headers

The function/operation of the fans is as follows:

- The fans are on when the computer is in the ACPI S0 state.
- The fans are off when the computer is in the ACPI S3, S4, or S5 state.
- The processor fan header is wired to a fan tachometer input. The chassis fan header has an independent tachometer input to the hardware monitoring and fan control device.
- All fan headers support closed-loop fan control that can adjust the fan speed according to thermal conditions.
- All fan headers have a +12 V DC connection.

The Desktop Board has a 4-pin processor fan header and a 3-pin chassis fan header.

LAN Wake Capabilities

CAUTION

For LAN wake capabilities, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply.

LAN wakeup capabilities enable remote wake-up of the computer through a network. The LAN subsystem monitors network traffic and upon detecting a Magic Packet* frame, it asserts a wake-up signal that powers up the computer.

Instantly Available PC Technology

CAUTIONS

For Instantly Available PC technology, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply and/or effect ACPI S3 sleep state functionality.

Power supplies used with this Desktop Board must be able to provide enough standby current to support the standard Instantly Available (ACPI S3 sleep state) configuration. If the standby current necessary to support multiple wake events from the PCI and/or USB buses exceeds power supply capacity, the Desktop Board may lose register settings stored in memory.

Instantly Available PC technology enables the board to enter the ACPI S3 (Suspend-to-RAM) sleep state. While in the S3 sleep state, the computer will appear to be off. If the computer has a dual-colored power LED on the front panel, the sleep state is indicated by the LED turning amber. When signaled by a wake-up device or event, the computer quickly returns to its last known awake state.
The Desktop Board supports the *PCI Bus Power Management Interface Specification*. Add-in cards that support this specification can participate in power management and can be used to wake the computer.

### +5 V Standby Power Indicator LED

**CAUTION**

*If the AC power has been switched off and the standby power indicator is still lit, disconnect the power cord before installing or removing any devices connected to the board. Failure to do so could damage the board and any attached devices.*

The Desktop Board’s standby power indicator, shown in Figure 3, is lit when there is standby power still present on the board even when the computer appears to be off. For example, when this LED is lit, standby power is still present at the memory module sockets and the PCI bus connector.

---

Wake from USB Support

NOTE

Wake from USB requires the use of a USB peripheral that supports Wake from USB.

USB bus activity wakes the computer from an ACPI S1 or S3 state.

PME# Signal Wake-up Support

When the PME# signal on the PCI bus is asserted, the computer wakes from an ACPI S1, S3, S4, or S5 (LAN only) state.

Wake From PS/2 Devices

PS/2 device activity wakes the computer from an ACPI S1 or S3 state.

Wake From Serial Devices

Serial port activity wakes the computer from an ACPI S1 or S3 state.

ENERGY STAR* Capable

In 2007, the US Department of Energy and the US Environmental Protection Agency revised the ENERGY STAR requirements. Intel worked directly with these two governmental agencies to define the new requirements. This Desktop Board meets the ENERGY STAR Category B requirements.

For more information concerning ENERGY STAR, go to http://www.intel.com/go/EnergyStar

Speaker

A speaker is mounted on the Desktop Board. The speaker provides audible error code (beep code) information during the Power-On Self-Test (POST).

Battery

A battery on the Desktop Board keeps the values in CMOS RAM and the clock current when the computer is turned off. Go to page 47 for instructions on how to replace the battery.

Real-Time Clock

The Desktop Board has a time-of-day clock and 100-year calendar. The battery on the Desktop Board keeps the clock current when the computer is turned off.
2 Installing and Replacing Desktop Board Components

This chapter tells you how to:

- Install the I/O shield
- Install and remove the Desktop Board
- Install and remove a processor
- Install and remove memory
- Use the Serial ATA cables
- Connect to the internal headers and connectors
- Connect to the audio system
- Connect chassis fan and power supply cables
- Set the BIOS configuration jumper
- Clear passwords
- Replace the battery

Before You Begin

⚠️ CAUTION

The procedures in this chapter assume familiarity with the general terminology associated with personal computers and with the safety practices and regulatory compliance required for using and modifying electronic equipment.

Disconnect the computer from its power source and from any telecommunications links, networks, or modems before performing any of the procedures described in this chapter. Failure to disconnect power, telecommunications links, networks, or modems before you open the computer or perform any procedures can result in personal injury or equipment damage. Some circuitry on the board can continue to operate even though the front panel power button is off.

Follow these guidelines before you begin:

- Always follow the steps in each procedure in the correct order.
- Set up a log to record information about your computer, such as model, serial numbers, installed options, and configuration information.
- Electrostatic discharge (ESD) can damage components. Perform the procedures described in this chapter only at an ESD workstation using an antistatic wrist strap and a conductive foam pad. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.
Installation Precautions

When you install and test the Intel Desktop Board, observe all warnings and cautions in the installation instructions.

To avoid injury, be careful of:
- Sharp pins on connectors
- Sharp pins on printed circuit assemblies
- Rough edges and sharp corners on the chassis
- Hot components (such as processors, voltage regulators, and heat sinks)
- Damage to wires that could cause a short circuit

Observe all warnings and cautions that instruct you to refer computer servicing to qualified technical personnel.

Prevent Power Supply Overload

Do not overload the power supply output. To avoid overloading the power supply, make sure that the calculated total current loads of all the modules within the computer is less than the output current rating of each of the power supply output circuits.

Observe Safety and Regulatory Requirements

Read and adhere to the instructions in this section and the instructions supplied with the chassis and associated modules. If you do not follow these instructions and the instructions provided by the chassis and module suppliers, you increase safety risk and the possibility of noncompliance with regional laws and regulations. If the instructions for the chassis are inconsistent with these instructions or the instructions for associated modules, contact the supplier's technical support to find out how you can ensure that your computer meets safety and regulatory requirements.

Related Links

For information about regulatory compliance, go to Appendix B on page 59.
Installing the I/O Shield

The Desktop Board comes with an I/O shield. When installed in the chassis, the shield blocks radio frequency transmissions, protects internal components from dust and foreign objects, and promotes correct airflow within the chassis.

Install the I/O shield before installing the Desktop Board in the chassis. Place the shield inside the chassis as shown in Figure 4. Press the shield into place so that it fits tightly and securely. If the shield does not fit, obtain a properly sized shield from the chassis supplier.

Figure 4. Installing the I/O Shield
Installing and Removing the Desktop Board

⚠️ CAUTION

Only qualified technical personnel should do this procedure. Disconnect the computer from its power source before performing the procedures described here. Failure to disconnect the power before you open the computer can result in personal injury or equipment damage.

Refer to your chassis manual for instructions on installing and removing the Desktop Board.

Figure 5 shows the location of the mounting screw holes for Intel Desktop Board DG41MJ.

---

Figure 5. Intel Desktop Board DG41MJ Mounting Screw Hole Locations
Installing and Removing a Processor

Instructions on how to install the processor to the Desktop Board are given below.

Installing a Processor

⚠️ CAUTION

Before installing or removing the processor, make sure the AC power has been removed by unplugging the power cord from the computer; the standby power LED should not be lit (see Figure 3 on page 21). Failure to do so could damage the processor and the board.

To install a processor, follow these instructions:
1. Observe the precautions in "Before You Begin" on page 23.
2. Open the socket lever by pushing the lever down and away from the socket (Figure 6, A and B).

Figure 6. Lift the Socket Lever
3. Lift the load plate (Figure 7, A). Do not touch the socket contacts (Figure 7, B).

4. Remove the plastic protective socket cover from the load plate (Figure 8). Do not discard the protective socket cover. Always replace the socket cover if the processor is removed from the socket.
5. Remove the processor from the protective processor cover. Hold the processor only at the edges, being careful not to touch the bottom of the processor (Figure 9). Do not discard the protective processor cover. Always replace the processor cover if the processor is removed from the socket.

Figure 9. Remove the Processor from the Protective Processor Cover

6. Hold the processor with your thumb and index fingers oriented as shown in Figure 10. Make sure your fingers align to the socket cutouts (Figure 10, A). Align notches (Figure 10, B) with the socket (Figure 10, C). Lower the processor straight down without tilting or sliding it in the socket.

Figure 10. Install the Processor
7. Pressing down on the load plate (Figure 11, A), close and engage the socket lever (Figure 11, B).

---

**Figure 11. Close the Load Plate**
Installing and Replacing Desktop Board Components

Installing the Processor Fan Heat Sink

Intel Desktop Board DG41MJ has mounting holes for a processor fan heat sink. For instructions on how to attach the processor fan heat sink to the Desktop Board, refer to the boxed processor manual.

Connecting the Processor Fan Heat Sink Cable

Connect the processor fan heat sink cable to the 4-pin processor fan header (see Figure 12). A fan with a 4-pin connector as shown in Figure 12, A is recommended; however, a fan with a 3-pin connector (Figure 12, B) can be used. However, since the fan with a 3-pin connector cannot use the onboard fan control, the fan will always operate at full speed.

Removing the Processor

For instructions on how to remove the processor fan heat sink and processor, refer to the processor installation manual.
Installing and Removing Memory

**NOTE**

To be fully compliant with all applicable Intel SDRAM memory specifications, the board requires DIMMs that support the Serial Presence Detect (SPD) data structure.

The Desktop Board has two 240-pin DDR2 DIMM sockets providing Channel A and Channel B. For optimum dual-channel performance, install a matched pair of DIMMs equal in speed and size (see Figure 13).

---

**Figure 13. Dual Channel Memory Configuration Example**

**NOTE**

All other memory configurations will result in single channel memory operation.
Installing DIMMs

To make sure you have the correct DIMM, place it on the illustration of the DDR2 DIMM in Figure 14. All the notches should match with the DDR2 DIMM.

---

**Figure 14. Use DDR2 DIMMs**
To install a DIMM, follow these steps:
1. Observe the precautions in "Before You Begin" on page 23.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the computer’s cover and locate the DIMM sockets (see Figure 15).

4. Make sure the clips at either end of the DIMM socket(s) are pushed outward to the open position.
5. Holding the DIMM by the edges, remove it from its anti-static package.
6. Position the DIMM above the socket. Align the small notch at the bottom edge of the DIMM with the keys in the socket (see inset in Figure 15).
7. Insert the bottom edge of the DIMM into the socket.
8. When the DIMM is inserted, push down on the top edge of the DIMM until the retaining clips snap into place. Make sure the clips are firmly in place.
9. Replace the computer’s cover and reconnect the AC power cord.
Removing DIMMs

To remove a DIMM, follow these steps:
1. Observe the precautions in "Before You Begin" on page 23.
2. Turn off all peripheral devices connected to the computer. Turn off the computer.
3. Remove the AC power cord from the computer.
4. Remove the computer’s cover.
5. Gently spread the retaining clips at each end of the DIMM socket. The DIMM pops out of the socket.
6. Hold the DIMM by the edges, lift it away from the socket, and store it in an anti-static package.
7. Reinstall and reconnect any parts you removed or disconnected to reach the DIMM sockets.
8. Replace the computer’s cover and reconnect the AC power cord.

Using the Serial ATA (SATA) Cables

Two SATA cables are provided with the Desktop Board:
• a standard SATA data cable
• a SATA-to-Slimline SATA adapter cable (with power) that allows you to connect a Slimline SATA drive to the board

Each cable can be used to connect a single internal SATA drive to the Desktop Board.
Connecting a Standard SATA Drive

You can use the standard SATA data cable supplied to connect a standard SATA drive to the Desktop Board.

For correct cable function:
1. Observe the precautions in “Before You Begin” on page 23.
2. Attach one end of the SATA data cable to one of the SATA connectors on the board (Figure 16, A) and attach the other end of the cable to the SATA drive (Figure 16, B).

---

Figure 16. Using the Standard SATA Cable
Connecting a Slimline SATA Drive

You can use the SATA-to-Slimline SATA adapter cable to connect a slimline SATA drive to a standard SATA data connector on the Desktop Board. This adapter splits a Slimline SATA connector into a standard SATA data cable and a power connector which plugs into a 4-pin 5 V Molex* power connector from an ATX12V power supply.

For correct adapter cable function:
1. Observe the precautions in “Before You Begin” on page 23.
2. Attach the adapter cable’s standard SATA data connector (Figure 17, A) to one of the SATA data connectors on the Desktop Board and attach the adaptor cable’s Slimline connector to the corresponding connector (Figure 17, B) on the Slimline SATA drive.
3. Connect the adapter cable’s power connector (Figure 17, C) to a 4-pin 5 V Molex power connector from the chassis power supply.

Figure 17. Using the SATA-to-Slimline SATA Adapter Cable
Connecting to the Internal Headers and Connectors

Before connecting cables to the internal headers and connectors, observe the precautions in “Before You Begin” on page 23. Figure 18 shows the location of the internal headers and connectors for Intel Desktop Board DG41MJ.

Figure 18. Internal Headers and Connectors
Front Panel Audio Header

The front panel audio header shown in Figure 18, A on page 38 supports both Intel HD Audio and AC’97 Audio. Table 5 shows the pin assignments and signal names for Intel HD Audio and Table 6 shows the pin assignments and signal names for AC’97 Audio.

Note: USB ports may be assigned as needed.

**NOTE**

Computer systems that have an unshielded cable attached to a USB port might not meet FCC Class B requirements, even if no device or a low-speed USB device is attached to the cable. Use a shielded cable that meets the requirements for a full-speed USB device.

Serial Port Header

See Figure 18, D on page 38 for the location of the serial port header. Table 9 shows the pin assignments for the serial port header.

**NOTE**

The back panel line out connector is designed to power either headphones or amplified speakers only. Poor audio quality may occur if passive (non-amplified) speakers are connected to this output.
Connecting Chassis Fan and Power Supply Cables

Connecting a Chassis Fan Cable

Connect your chassis fan cable to the 3-pin chassis fan header on the Desktop Board. Figure 20 shows the location of the chassis fan header.

Figure 20. Location of the Chassis Fan Header
Connecting Supply Power Cables

**CAUTION**

*Failure to use an appropriate power supply and/or not connecting the 12 V (2 x 2 pin) power connector to the Desktop Board may result in damage to the board or the system may not function properly.*

The 2 x 12 pin main power connector on the Desktop Board is backwards compatible with ATX12V power supplies with 2 x 10 connectors. Figure 21 shows the location of the Desktop Board power connectors.

1. Observe the precautions in "Before You Begin" on page 23.
2. Connect the main power supply cable to the 2 x 12 pin connector.
3. Connect the 12 V processor core voltage power supply cable to the 2 x 2 pin connector.
Setting the BIOS Configuration Jumper

NOTE

Always turn off the power and unplug the power cord from the computer before moving the jumper. Moving the jumper with the power on may result in unreliable computer operation.

Figure 22 shows the location of the Desktop Board’s BIOS configuration jumper block.

The three-pin BIOS jumper block enables all board configurations to be done in the BIOS Setup program. Table 12 shows the jumper settings for the BIOS Setup program modes.
Table 12. Jumper Settings for the BIOS Setup Program Modes

<td>The BIOS recovers data in the event of a failed BIOS update.</td>
</tr>
</tbody>
</table>

Clearing Passwords

This procedure assumes that the board is installed in the computer and the configuration jumper block is set to normal mode.

1. Observe the precautions in "Before You Begin" on page 23.
2. Turn off all peripheral devices connected to the computer. Turn off the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Find the configuration jumper block (see Figure 22).
5. Place the jumper on pins 2-3 as shown below.

6. Replace the cover, plug in the computer, turn on the computer, and allow it to boot.
7. The computer starts the Setup program. Setup displays the Maintenance menu.
8. Use the arrow keys to select Clear Passwords. Press <Enter> and Setup displays a pop-up screen requesting that you confirm clearing the password. Select Yes and press <Enter>. Setup displays the maintenance menu again.
9. Press <F10> to save the current values and exit Setup.
10. Turn off the computer. Disconnect the computer’s power cord from the AC power source.
11. Remove the computer cover.
12. To restore normal operation, place the jumper on pins 1-2 as shown below.

13. Replace the cover, plug in the computer, and turn on the computer.

**Replacing the Battery**

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery. The clock is accurate to $\pm 13$ minutes/year at 25 °C with 3.3 VSB applied.

When the voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Figure 23 on page 51 shows the location of the battery.

⚠️ **CAUTION**
*Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.*

⚠️ **PRÉCAUTION**
*Risque d’explosion si la pile usagée est remplacée par une pile de type incorrect. Les piles usagées doivent être recyclées dans la mesure du possible. La mise au rebut des piles usagées doit respecter les réglementations locales en vigueur en matière de protection de l’environnement.*

⚠️ **FORHOLDSREGEL**

⚠️ **OBS!**
*Det kan oppstå eksplosionsfare hvis batteriet skiftes ut med feil type. Brukte batterier bør kastes i henhold til gjeldende miljølovgivning.*

⚠️ **VIKTIGT!**
*Risk för explosion om batteriet ersätts med felaktig batterityp. Batterier ska kasseras enligt de lokala miljövårdsbestämmelserna.*
VARO
Räjähdysvaara, jos pariston tyyppi on väärä. Paristot on kierrätettävä, jos se on
mahdollista. Käytetyt paristot on hävitettävä paikallisten ympäristömääräysten
mukaisesti.

VORSICHT
Bei falschem Einsetzen einer neuen Batterie besteht Explosionsgefahr. Die Batterie
darf nur durch denselben oder einen entsprechenden, vom Hersteller empfohlenen
Batterietyp ersetzt werden. Entsorgen Sie verbrauchte Batterien den Anweisungen
des Herstellers entsprechend.

AVVERTIMENTO
Esiste il pericolo di un esplosione se la pila non viene sostituita in modo corretto. Utilizzare solo pile uguali o di tipo equivalente a quelle consigliate dal produttore. Per
disfarsi delle pile usate, seguire le istruzioni del produttore.

PRECAUCIÓN
Existe peligro de explosión si la pila no se cambia de forma adecuada. Utilice
solamente pilas iguales o del mismo tipo que las recomendadas por el fabricante del
equipo. Para deshacerse de las pilas usadas, siga igualmente las instrucciones del
fabricante.

WAARSCHUWING
Er bestaat ontploffingsgevaar als de batterij wordt vervangen door een onjuist type
batterij. Batterijen moeten zoveel mogelijk worden gerecycled. Houd u bij het
weggooien van gebruikte batterijen aan de plaatselijke milieuwetgeving.

ATENÇÃO
Haverá risco de explosão se a bateria for substituída por um tipo de bateria incorreto.
As baterias devem ser recicladas nos locais apropriados. A eliminação de baterias
usadas deve ser feita de acordo com as regulamentações ambientais da região.

AŞCIAROŻZNAŚĆ
Існуе ризи́ка выбуху́, калі заменены аккумуля́тар непра́вільнага тыпу.
Аккумуля́тары паві́ны, па мара́чымацці, перапрацоўва́цца. Пазбаўля́цца ад старых
аккумуля́тараў патраба́ згодна з мясцовым закана́даўствам па экалогіі.

UPOZORNÍNÍ
V případě výměny baterie za nesprávný druh může dojít k výbuchu. Je-li to možné,
baterie by měly být recyklovány. Baterie je třeba zlikvidovat v souladu s místními
předpisy o životním prostředí.
Installing and Replacing Desktop Board Components

Προσοχή
Υπάρχει κίνδυνος για έκρηξη σε περίπτωση που η μπαταρία αντικατασταθεί από μία λανθασμένου τύπου. Οι μπαταρίες θα πρέπει να ανακυκλώνονται όταν κάτι τέτοιο είναι δυνατό. Η απόρριψη των χρησιμοποιημένων μπαταριών πρέπει να γίνεται σύμφωνα με τους κατά τόπο περιβαλλοντικούς κανονισμούς.

VIGYÁZAT
Ha a telepet nem a megfelelő típusú telepre cseréli, az felrobbanhat. A telepeket lehetőség szerint újra kell hasznosítani. A használt telepeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejtezni.

警告
異なる種類の電池を使用すると、爆発の危険があります。リサイクルが可能な地域であれば、電池をリサイクルしてください。使用後の電池を破棄する際には、地域の環境規制に従ってください。

AWAS

OSTRZEŻENIE
Istnieje niebezpieczeństwo wybuchu w przypadku zastosowania niewłaściwego typu baterii. Zużyte baterie należy w miarę możliwości utylizować zgodnie z odpowiednimi przepisami ochrony środowiska.

PRECAUŢIE
Risc de explozie, dacă bateria este înlocuită cu un tip de baterie necorespunzător. Bateriile trebuie reciclate, dacă este posibil. Depozitarea bateriilor uzate trebuie să respecte reglementările locale privind protecția mediului.

ВНИМАНИЕ
При использовании батареи несоответствующего типа существует риск ее взрыва. Батареи должны быть утилизированы по возможности. Утилизация батарей должна проводиться по правилам, соответствующим местным требованиям.

UPOZORNENIE
Ak batériu vymenite za nesprávny typ, hrozí nebezpečenstvo jej výbuchu. Batérie by sa mali podľa možnosti vždy recyklovať. Likvidácia použitých batérií sa musí vykonávať v súlade s miestnymi predpismi na ochranu životného prostredia.
POZOR
Zamenjava baterije z baterijo drugačnega tipa lahko povzroči eksplozijo. Če je mogoče, baterije reciklirajte. Rabljene baterije zavrzite v skladu z lokalnimi okoljevarstvenimi predpisi.

に向けて
ระวังการเปลี่ยนแบตเตอรี่แบบเดิมหรือมีอันตราย ควรเปลี่ยนแบตเตอรี่ใหม่โดยมีการติดตั้งให้ถูกต้องตามคำแนะนำและหลักการของผลิตภัณฑ์.

UYARI

OCTOPOGA
Використовуйте батареї правильного типу, інакше існуватиме ризик вибуху. Якщо можливо, використані батареї слід утилізувати. Утилізація використаних батарей має бути виконана згідно місцевих норм, що регулюють охорону довкілля.

UPOZORNĚNÍ

ETTEVAATUST
Kui patarei asendatakse uue ebasobivat tüüpi patareiga, võib tekkida plahvatusoht. Tühjad patareid tuleb võimaluse korral viia vastavasse kogumispunkt. Tühjad patareid äraviskamisel tuleb järgida kohalike keskkonnakaitse alaseid reegleid.

FIGYELMEZTETÉS
Ha az elemet nem a megfelelő típusúra cserélő, felrobbanhat. Az elemeket lehetőség szerint újra kell hasznosítani. A használt elemeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejezni.

UZMANĪBU

DĖMESIO
To replace the battery, follow these steps:
1. Observe the precautions in "Before You Begin" (see page 23).
2. Turn off all peripheral devices connected to the computer. Disconnect the computer's power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Locate the battery on the board (see Figure 23).
5. Push the battery retention clip aside and remove the battery from the connector as shown in Figure 23. Note the orientation of the "+" and "-" on the battery.
6. Install the new battery in the connector, making sure to orient the "+" and "-" correctly.
7. Replace the computer cover.

![Figure 23. Removing the Battery](image-url)
3 Updating the BIOS

The BIOS Setup program can be used to view and change the BIOS settings for the computer. You can access the BIOS Setup program by pressing the <F2> key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

This chapter tells you how to update the BIOS by either using the Intel Express BIOS Update utility or the Iflash Memory Update utility, and how to recover the BIOS if an update fails.

Updating the BIOS with the Intel® Express BIOS Update Utility

With the Intel Express BIOS Update utility you can update the system BIOS while in the Microsoft Windows environment. The BIOS file is included in an automated update utility that combines the functionality of the Intel® Flash Memory Update Utility and the ease of use of Windows-based installation wizards.

To update the BIOS with the Intel Express BIOS Update utility:
3. Download the file to your hard drive. (You can also save this file to a removable USB device. This is useful if you are updating the BIOS for multiple identical systems.)
4. Close all other applications. This step is required. Your system will be rebooted at the last Express BIOS Update window.
5. Double-click the executable file from the location on your hard drive where it was saved. This runs the update program.
6. Follow the instructions provided in the dialog boxes to complete the BIOS update.
Updating the BIOS with the ISO Image BIOS Update File or the Iflash Memory Update Utility

You can use the information in this section to update the BIOS using either the Iflash Memory Update Utility or the ISO Image BIOS update file.

Obtaining the BIOS Update File

You can update to a new version of the BIOS by using the ISO Image BIOS update file (recommended), or Iflash BIOS update file.

The ISO Image BIOS update file is a standardized image of a bootable CD-ROM that can be used to create a bootable CD that will update the BIOS.

The Iflash BIOS update file is a compressed file that contains the files you need to update the BIOS. The Iflash BIOS update file contains:

- New BIOS file
- Intel® Integrator Toolkit Configuration File (optional)
- Intel Flash Memory Update Utility

You can obtain either of these files through your computer supplier or by navigating to the Intel Desktop Board DG41MJ page on the Intel World Wide Web site at http://support.intel.com/support/motherboards/desktop

Navigate to the Intel Desktop Board DG41MJ page, click “Latest BIOS,” and select the ISO Image BIOS Update or Iflash BIOS Update utility file.

Updating the BIOS with the ISO Image BIOS Update File

The ISO Image BIOS update allows for the update of an Intel® Desktop Board BIOS to the latest production release regardless of the operating system installed on the computer's hard drive and without the need to remove the BIOS configuration jumper. It requires a blank CD-R, a read/writeable CD drive, and software capable of uncompressing and writing the ISO image file to CD.

The image uses ISOLINUX* bootloader and automatically launches a script to upgrade the BIOS via the Iflash utility.

⚠️ CAUTION

Do not interrupt the process or the system may not function properly.
Follow these instructions to upgrade the BIOS using the ISO Image BIOS file:

1. Download the ISO Image BIOS file.
2. Using software capable of uncompressing and writing an ISO image file to CD, burn the data to a blank CD.

**NOTE**

*Copying the ISO Image BIOS file to CD will not work. The completed CD should contain multiple files and a directory.*

3. Insert the CD that was created in the CD-ROM drive of the computer to be upgraded and boot the system.
4. When the "Press ENTER to continue booting from CD-ROM" prompt appears, press the Enter key. The system will boot from the hard drive if no key is pressed within 15 seconds.
5. At the "Welcome to the Intel Desktop Board BIOS Upgrade CD-ROM" page, press any key to confirm the BIOS upgrade operation.
6. Wait for the BIOS upgrade process to complete.

**CAUTION**

*DO NOT POWER DOWN YOUR COMPUTER before the update is complete. The update may take up to 5 minutes.*

### Updating the BIOS with the Iflash Memory Update Utility

With the Iflash Memory update utility you can update the system BIOS from a bootable CD-ROM, bootable USB flash drive, or other bootable USB media. The utility available on the Intel World Wide Web site provides a simple method for creating a bootable CD-ROM that will automatically update your BIOS. The Iflash BIOS update files can also be extracted locally to your hard drive and copied to a bootable USB flash drive or other bootable USB media.

The Iflash Memory update utility allows you to:

- Update the BIOS in flash memory
- Update the language section of the BIOS

**NOTE**

*Review the instructions distributed with the update utility before attempting a BIOS update.*

**CAUTION**

*Do not interrupt the process or the system may not function properly.*
1. Uncompress the BIOS update file and copy the .BIO file, IFLASH.EXE, and .ITK file (optional) to a bootable USB flash drive or other bootable USB media.
2. Configure the BIOS or use the F10 option during POST to boot to the USB device.
3. Manually run the IFLASH.EXE file from the USB device and manually update the BIOS.

**Recovering the BIOS**

It is unlikely that anything will interrupt the BIOS update; however, if an interruption occurs, the BIOS could be damaged. Due to BIOS size and recovery requirements, a CD-R with the .BIO file in the root directory will be required.

For more information about updating the Intel Desktop Board BIOS or recovering from a BIOS update failure, go to http://support.intel.com/support/motherboards/desktop/sb/CS-022312.htm
A Error Messages and Indicators

Intel Desktop Board DG41MJ reports POST errors in two ways:
- By sounding a beep code
- By displaying an error message on the monitor

BIOS Beep Codes

The BIOS also issues a beep code (one long tone followed by two short tones) during POST if the video configuration fails (a faulty video card or no card installed) or if an external ROM module does not properly checksum to zero. Table 13 lists the BIOS codes.

Table 13. Beep Codes

<table>
<thead>
<tr>
<th>Beep</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>No memory</td>
</tr>
<tr>
<td>Siren</td>
<td>Processor overheat (on reboot)</td>
</tr>
</tbody>
</table>

BIOS Error Messages

When a recoverable error occurs during the POST, the BIOS displays an error message describing the problem. Table 14 gives an explanation of the BIOS error messages.

Table 14. BIOS Error Messages

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROCESSOR_THERMAL_TRIP_ERROR</td>
<td>Processor was previously shutdown due to a thermal event (overheating).</td>

B Regulatory Compliance

This appendix contains the following regulatory compliance information for Intel Desktop Board DG41MJ:
- Safety standards
- European Union Declaration of Conformity statement
- Product Ecology statements
- Electromagnetic Compatibility (EMC) regulations
- Product certifications

Safety Standards

Intel Desktop Board DG41MJ complies with the safety standards stated in Table 15 when correctly installed in a compatible host system.

Table 15. Safety Standards

Place Battery Marking

There is insufficient space on this Desktop Board to provide instructions for replacing and disposing of the Lithium ion coin cell battery. For system safety certification, the statement below or an equivalent statement is required to be permanently and legibly marked on the chassis near the battery.

⚠️ CAUTION

*Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.*

Related Links

For information about replacing the battery, go to page 47.
European Union Declaration of Conformity Statement

We, Intel Corporation, declare under our sole responsibility that the product Intel® Desktop Board DG41MJ is in conformity with all applicable essential requirements necessary for CE marking, following the provisions of the European Council Directives 2004/108/EC (EMC Directive) and 2006/95/EC (Low Voltage Directive).

The product is properly CE marked demonstrating this conformity and is for distribution within all member states of the EU with no restrictions.

This product follows the provisions of the European Directives 2004/108/EC and 2006/95/EC.

Čeština  Tento výrobek odpovídá požadavkům evropských směrnic 2004/108/EC a 2006/95/EC.

Dansk  Dette produkt er i overensstemmelse med det europæiske direktiv 2004/108/EC & 2006/95/EC.

Dutch  Dit product is in navolging van de bepalingen van Europees Directief 2004/108/EC & 2006/95/EC.

Français  Ce produit est conforme aux exigences de la Directive Européenne 2004/108/EC & 2006/95/EC.

Deutsch  Dieses Produkt entspricht den Bestimmungen der Europäischen Richtlinie 2004/108/EC & 2006/95/EC.

Latviešu  Šis produkts atbilst Eiropas Direktīvu 2004/108/EC un 2006/95/EC noteikumiem.
Product Ecology Statements

The following information is provided to address worldwide product ecology concerns and regulations.

Recycling Considerations

As part of its commitment to environmental responsibility, Intel has implemented the Intel® Product Recycling Program to allow retail consumers of Intel’s branded products to return used products to selected locations for proper recycling.

Please consult http://www.intel.com/intel/other/ehs/product_ecology for the details of this program, including the scope of covered products, available locations, shipping instructions, terms and conditions, etc.

中文

作为其对环境责任之承诺的部分，英特尔已实施 Intel Product Recycling Program（英特尔产品回收计划），以允许英特尔品牌产品的零售消费者将使用过的产品退还至指定地点作恰当的重复使用处理。

请参考http://www.intel.com/intel/other/ehs/product_ecology 了解此计划的详情，包括涉及产品之范围、回收地点、运送指导、条款和条件等。
Deutsch

Details zu diesem Programm, einschließlich der darin eingeschlossenen Produkte, verfügbaren Standorte, Versandanweisungen, Bedingungen usw., finden Sie auf der http://www.intel.com/intel/other/ehs/product_ecology

Español
Como parte de su compromiso de responsabilidad medioambiental, Intel ha implantado el programa de reciclaje de productos Intel, que permite que los consumidores al detalle de los productos Intel devuelvan los productos usados en los lugares seleccionados para su correspondiente reciclado.

Consulte la http://www.intel.com/intel/other/ehs/product_ecology para ver los detalles del programa, que incluye los productos que abarca, los lugares disponibles, instrucciones de envío, términos y condiciones, etc.

Français
Dans le cadre de son engagement pour la protection de l'environnement, Intel a mis en œuvre le programme Intel Product Recycling Program (Programme de recyclage des produits Intel) pour permettre aux consommateurs de produits Intel de recycler les produits usés en les retournant à des adresses spécifiées.

**Lead-Free Desktop Board**

This Desktop Board is a European Union Restriction of Hazardous Substances (EU RoHS Directive 2002/95/EC) compliant product. EU RoHS restricts the use of six materials. One of the six restricted materials is lead.

Intel Desktop Board DG41MJ is lead-free although certain discrete components used on the board contain a small amount of lead which is necessary for component performance and/or reliability. This Desktop Board is referred to as “Lead-free second level interconnect.” The board substrate and the solder connections from the board to the components (second-level connections) are all lead-free.

China bans the same substances and has the same limits as EU RoHS; however it requires different product marking and controlled substance information. The required mark shows the Environmental Friendly Usage Period (EFUP). The EFUP is defined as the number of years for which controlled listed substances will not leak or chemically deteriorate while in the product.
Table 16 shows the lead-free board markings as they appear on the board and accompanying collateral.

**Table 16. Lead-Free Board Markings**

Japanese Kanji statement translation: This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.
Korean Class B statement translation: This is household equipment that is certified to comply with EMC requirements. You may use this equipment in residential environments and other non-residential environments.

이 기기는 가정용으로 전자파적합등록을 한 기기로서 주거지역에서는 물론 모든 지역에서 사용할 수 있습니다.

Ensure Electromagnetic Compatibility (EMC) Compliance

Before computer integration, make sure that the power supply and other modules or peripherals, as applicable, have passed Class B EMC testing and are marked accordingly.

Pay close attention to the following when reading the installation instructions for the host chassis, power supply, and other modules:
- Product certifications or lack of certifications
- External I/O cable shielding and filtering
- Mounting, grounding, and bonding requirements
- Keying connectors when mating the wrong connectors could be hazardous

If the power supply and other modules or peripherals, as applicable, are not Class B EMC compliant before integration, then EMC testing may be required on a representative sample of the newly completed computer.
Product Certifications

Board-Level Certification Markings

Intel Desktop Board DG41MJ has the product certification markings shown in Table 18.

Table 18. Product Certification Markings

</tr>
</tbody>
</table>
Chassis and Component Certifications

Ensure that the chassis and certain components; such as the power supply, peripheral drives, wiring, and cables; are components certified for the country or market where used. Agency certification marks on the product are proof of certification. Typical product certifications include:

In Europe
The CE marking signifies compliance with all applicable European requirements. If the chassis and other components are not properly CE marked, a supplier’s Declaration of Conformity statement to the European EMC directive and Low Voltage directive (as applicable), should be obtained. Additionally, other directives, such as the Radio and Telecommunications Terminal Equipment (R&TTE) directive may also apply depending on product features.

In the United States
A certification mark by a Nationally Recognized Testing Laboratory (NRTL) such as UL, CSA, or ETL signifies compliance with safety requirements. Wiring and cables must also be UL listed or recognized and suitable for the intended use. The FCC Class B logo for home or office use signifies compliance with electromagnetic interference (EMI) requirements.

In Canada
A nationally recognized certification mark such as CSA or cUL signifies compliance with safety requirements. The Industry Canada statement at the front of this product guide demonstrates compliance with Canadian EMC regulations.
