# Disclaimer

THIS PRODUCT SPECIFICATION APPLIES TO ONLY THE STANDARD INTEL NUC BOARD NUC13AN WITH BIOS IDENTIFIERS ANRPL357.00XX

INFORMATION IN THIS DOCUMENT IS PROVIDED IN CONNECTION WITH INTEL® PRODUCTS. NO LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE, TO ANY INTELLECTUAL PROPERTY RIGHTS IS GRANTED BY THIS DOCUMENT. EXCEPT AS PROVIDED IN INTEL'S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER, AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT. UNLESS OTHERWISE AGREED IN WRITING BY INTEL, THE INTEL PRODUCTS ARE NOT DESIGNED NOR INTENDED FOR ANY APPLICATION IN WHICH THE FAILURE OF THE INTEL PRODUCT COULD CREATE A SITUATION WHERE PERSONAL INJURY OR DEATH MAY OCCUR.

All Intel NUC Boards are evaluated as Information Technology Equipment (I.T.E.) for use in personal computers (PC) for installation in homes, offices, schools, computer rooms, and similar locations. The suitability of this product for other PC or embedded non-PC applications or other environments, such as medical, industrial, alarm systems, test equipment, etc. may not be supported without further evaluation by Intel.

Intel Corporation may have patents or pending patent applications, trademarks, copyrights, or other intellectual property rights that relate to the presented subject matter. The furnishing of documents and other materials and information does not provide any license, express or implied, by estoppel or otherwise, to any such patents, trademarks, copyrights, or other intellectual property rights.

Intel may make changes to specifications and product descriptions at any time, without notice.

Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined." Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families: Go to: Learn About Intel<sup>®</sup> Processor Numbers

Intel NUC may contain design defects or errors known as errata, which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Contact your local Intel sales office or your distributor to obtain the latest specifications before placing your product order.

# **Preface**

This Technical Product Specification (TPS) specifies the board layout, components, connectors, power and environmental requirements, and the BIOS for Intel® NUC Kits NUC13VY. Some features are only available on certain SKUs.

# **Intended Audience**

The TPS is intended to provide detailed, technical information about Intel® NUC Kit, and Mini PCs NUC13VY and its components to the vendors, system integrators, and other engineers and technicians who need this level of information. It is specifically not intended for general audiences.

# What This Document Contains

Chapter	Description		
1	An overview of the features and specifications of the Intel® NUC NUC13VY		
2	The figures, layouts, and physical description of the Intel® NUC NUC13AN Board		
3	Detailed descriptions of the features and specifications		
4	Technical references and considerations		
5	An overview of BIOS features and specifications		

# **Typographical Conventions**

This section contains information about the conventions used in this specification. Not all these symbols and abbreviations appear in all specifications of this type.

### Notes, Cautions, and Warnings

#### NOTE

Notes call attention to important information.

# A CAUTION

Cautions are included to help you avoid damaging hardware or losing data.

#	Used after a signal name to identify an active-low signal (such as USBPO#)
GB	Gigabyte (1,073,741,824 bytes)
GB/s	Gigabytes per second
Gb/s	Gigabits per second
КВ	Kilobyte (1024 bytes)
Kb	Kilobit (1024 bits)
kb/s	1000 bits per second
MB	Megabyte (1,048,576 bytes)
MB/s	Megabytes per second
Mb	Megabit (1,048,576 bits)
Mb/s	Megabits per second
TDP	Thermal Design Power
xxh	An address or data value ending with a lowercase h indicates a hexadecimal value.
x.x V	Volts. Voltages are DC unless otherwise specified.
x.x A	Amperes.
*	This symbol is used to indicate third-party brands and names that are the property of their respective owners.

# **Other Common Notation**

# **Board Identification Information**

Basic Intel<sup>®</sup> NUC Board NUC13AN Identification Information

AA Revision	BIOS Revision	Notes	
	ANRPL357.00XX	1	

Notes:

1. The AA number is found on a small label on the component side of the board.

# **Production Identification Information**

Intel® NUC Products NUC13AN Identification Information

Product Name	Intel® NUC Board		
NUC13VYKi5	NUC13ANBi5		
NUC13VYKi7	NUC13ANBi7		

# **Specification Changes or Clarifications**

The table below indicates the Specification Changes or Specification Clarifications that apply to the Intel NUC Kit/Mini PC NUC13VY.

#### **Specification Changes or Clarifications**

Date	Type of Change Description of Changes or Clarifications		

### Errata

Current characterized errata, if any, are documented in a separate Specification Update. See for the latest documentation.

# 1.1 Overview

# 1.1.1 Summary of Mini PC SKUs

Product Codes and MM#s for the SKUs below can be found at <u>https://ark.intel.com</u>.

Processor	Chassis	AC Cord (C5)	RAM	Storage	OS
Intel® Core™ i7-1360P Processor	Slim	US, EU, or CN	2 x 8 GB	512 GB Gen4 NVMe SSD	Win11 Home
					Advanced
Intel® Core™ i5-1340P Processor	Slim	US, EU, or CN	2 x 4 GB	512 GB Gen4 NVMe SSD	Win11 Home
					Standard

# **1.1.2** Summary of Standard Kit and Board SKUs

Product Codes and MM#s for the SKUs below can be found at <u>https://ark.intel.com</u>.

Processor	Chassis	AC Cord (C5)	ТРМ
Intel <sup>®</sup> Core™ i7-1360P	Slim	US, EU, CN	-
Processor	Sum		
Intel® Core™ i5-1340P	Slim	US, EU, CN	-
Processor	Sum		

<sup>1</sup> "WW" refers to worldwide

<sup>2</sup> "CN" refers to China

# **1.1.3** Feature Summary Kits

Table 1 summarizes the major features of Intel® NUC Kit, and Mini PC

NUC13VY

#### Table 1. Feature Summary

Board Dimensions	4.0in by 4.0in (104.1mm by 101.6mm)			
Max Chassis Dimensions	Slim Chassis: 117mm by 112mm x 37mm (including feet)			
Processor	Intel® NUC Kits, and Mini PCs NUC13VY Standard products have a soldered-down 13 <sup>th</sup>			
	generation processor from the list below.			
	Intel <sup>®</sup> Core <sup>™</sup> i7-1360P Processor			
	<ul> <li>Intel<sup>®</sup> Core<sup>™</sup> i5-1340P Processor</li> </ul>			
	More information about Intel <sup>®</sup> processors can be found at <u>https://ark.intel.com</u>			
Memory	Two 260-pin 1.2 V DDR4 SDRAM Small Outline Dual Inline Memory Module (SO-DIMM) sockets			
	<ul> <li>Support for DDR4 2400/2666/3200 MHz SO-DIMMs</li> </ul>			
	<ul> <li>Support for 8 Gb and 16 Gb technology</li> </ul>			
	<ul> <li>Support for up to 64 GB of system memory with two SO-DIMMs using 32 GB memory modules</li> </ul>			
	Support for non-ECC memory			
	<ul> <li>Support for 1.2 V JEDEC memory only</li> </ul>			
	Note: 2 Gb and 4 Gb memory technology (SDRAM Density) is not supported			
	More information about tested memory can be found at <a href="http://www.intel.com/NUCSupport">http://www.intel.com/NUCSupport</a>			
Graphics	Integrated graphics support for processors with Intel® Graphics Technology:			
	<ul> <li>Supports up to quad 4K60Hz displays (2 x DP/Type C + 2 x HDMI 2.1 TMDS)</li> </ul>			
	• Supports a single 8K60Hz panel, supported by joining two pipes over a single port			
	HDR (High Dynamic Range) support			
	• Four display pipes – supporting blending, color adjustments, scaling, and dithering			
	• Support for HDCP 1.4 and 2.3			
	<ul> <li>Codecs supported are detailed in Section 3.1</li> </ul>			
	<ul> <li>Supporting Persistent Display Emulation on HDMI ports only</li> </ul>			
Audio	Realtek audio is delivered through a 3.5mm stereo headset jack. The processor supports four High-Definition audio streams on four digital ports simultaneously.			
	The processor supports the following audio formats over HDMI* and DisplayPort*: AC-3 Dolby* Digital, Dolby* Digital Plus, DTS-HD*, LPCM, 192 Khz/24 bit, 6 Channel, and Dolby* TrueHD, DTS-HD Master Audio*.			
	More information about software and drivers can be found at <a href="https://downloadcenter.intel.com">https://downloadcenter.intel.com</a>			
Storage	One M.2 PCIe Gen4 connector supporting M.2 22x80 (key type M) for NVMe only One M.2 connector supporting M.2 22x42 (key type B) for SATA SSD, PCIe x1 or USB 3.2 expandability One SATA 6.0 Gb/s combined data and power connector			

Communication         Intel <sup>®</sup> WX-11 (Gig+) M.2 2230 add-in card (Mini PC and Kit only) via M.2 2230 (key type is connector           • 002.113x R2 2x2, both with 160Mhz channel support + Bluetooth v5.3         • Maximum transfer speed up to 2.4 Gbps           • Supports PCIe and USB         More information about Intel <sup>®</sup> wireless products can be found at https://ark.intel.com           To obtain drivers visit https://downloadscenter.intel.com         Gigabit (10/100/1000/2500 Mbps) LAN subsystem using the Intel <sup>®</sup> 1255-V Gigabit Ethernet Controller           • FCIe 3.1 SGT/s support for x1 width (Lane)         • Single-port integrated multi-gigabit (up to 2.50) - standard IEEE 802.3 Ethernet interface for 2500BASE-T, 1000BASE-TX, 100BASE-TX, 100BASE-TE connections (IEEE 802.3, 802.3u, 802.3u, 802.3u, 802.3u, 802.3u)           • FUI wake up support (54 WOL not supported)         • Supports for packets up to 9.5 KB (Lumbo Frames)           More information about Intel <sup>®</sup> Ethernet controllers can be found at https://ark.intel.com           • Thunderbolt"         2 XFMunderbolt" ports (Back panel)           • ISW (SV/3A) port bus power on NUC13VY           • Thunderbolt metworking           • PD Modes Supported: TBT3, US84, US83, DP-alt/MF           TBT3 Tx/Rx rates: 40G (2x 20.625, 206 (2x 10.3125)           PCI Express Tunneling: 32 Gbps, Thunderbolt 4 certified)           PDT 42, H8R3           DisplayPort Tunneling:           PDT 42, H8R3           DisplayPort S ror pace and Headers <t< th=""><th></th><th></th></t<>

Intel <sup>®</sup> BIOS provides options to select an External Ambient Temperature Tolerance. Users			
can select 0-35C, 0-40C, or User Defined. Each option impacts system power, performance,			
and cooling settings.			
Intel <sup>®</sup> BIOS resident in the Serial Peripheral Interface (SPI) Flash device			
Support for Advanced Configuration and Power Interface (ACPI), Plug and Play, and System			
Management BIOS (SMBIOS)			
Intel® NUC Mini PCs NUC13VY ship with Windows 11 Home Standard 64-bit or Windows 11			
Home Advanced preinstalled			
More information about available Intel® NUC Mini PCs NUC13VY can be found in Section			
1.1.1 Summary of Mini PC SKUs. For Product Codes and MM#s visit <u>https://ark.intel.com</u>			
Hardware monitoring subsystem including:			
Voltage sense to detect out of range power supply voltages			
Thermal sense to detect out of range thermal values			
One processor fan header			
Fan sense input used to monitor fan activity			
Fan speed control			

<sup>1</sup> May not be available in all countries

#### Table 2. Additional Features

HDMI CEC API	Built-in support for HDMI CEC is available on both HDMI ports, which may be enabled in the
	BIOS for display power control, as well as via an API supporting other HDMI CEC functions.
	More information about the HDMI CEC API specification is available on
	https://www.intel.com/content/www/us/en/support/articles/000056864/intel-nuc.html
Sustained Operation	Qualified for 24x7 sustained operation
Auto RTC Reset	A Real-Time Clock (RTC) reset will be triggered after three consecutive unsuccessful boot
	attempts.
Delayed AC Start	Short delay after AC power is applied before unit is ready to power on to protect the system
	against voltage fluctuations in environments where multiple devices are being powered on
	simultaneously
Reflectivity	All surfaces meet 20GE (20 Gloss Level/Gloss Units) of shininess by measurement of Glanz
Kensington Security Slot	Available on the left side of the chassis when viewed from the front
Cable Locking Arm	Intel® NUC Mini PCs and Kits NUC13VY ship with a cable locking arm on the back panel of
	the chassis. The cable locking arm reduces stress on the power adapter cable in certain
	positions and prevents unintended losses of power
VESA Mount	More information about Intel NUC VESA mounts is available on intel.com at this URL

# **3** Feature Descriptions

# 3.1 Graphics Subsystem

Intel® NUC Boards NUC13AN support Intel® Iris® Xe Graphics

#### 3.1.1 Intel<sup>®</sup> Iris<sup>®</sup> Xe Graphics

Intel<sup>®</sup> Iris<sup>®</sup> Xe Graphics implements a high-performance and low-power HW acceleration for video decoding operations for multiple video codecs.

The HW decode is exposed by the graphics driver using the following APIs:

- Direct3D\* 9 Video API (DXVA2), Direct3D11 Video API, Direct3D12 Video API, Intel Media SDK, MFT (Media Foundation Transform) filters, and Intel VA API.
- Intel<sup>®</sup> Iris<sup>®</sup> Xe Graphics supports full HW accelerated video decoding for AVC/HEVC/VP9/JPEG and AVI.

Intel<sup>®</sup> 13<sup>th</sup> Gen Processors implements a low-power low-latency fixed function encoder and highquality customizable encoder with hardware assisted motion estimation engine which supports AVC, MPEG-2, HEVC, and VP9. The HW encode is exposed by the graphics driver using the following APIs:

- Intel<sup>®</sup> Media SDK and MFT (Media Foundation Transform) filters.
- Intel<sup>®</sup> Iris<sup>®</sup> Xe Graphics supports full HW accelerated video encoding for AVC/HEVC/VP9/JPEG.

There is hardware support for image processing functions such as De-interlacing, Film cadence detection, Advanced Video Scaler (AVS), detail enhancement, gamut compression, HD adaptive contrast enhancement, skin tone enhancement, total color control, Chroma de-noise, SFC (Scalar and Format Conversion), memory compression, Localized Adaptive Contrast Enhancement (LACE), spatial de-noise, Out-Of-Loop De-blocking (from AVC decoder), and 16 bpc support for de-noise/de-mosaic. The HW video processing is exposed by the graphics driver using the following APIs:

• Direct3D\* 9 Video API (DXVA2), Direct3D\* 11 Video API, OneVPL, MFT (Media Foundation Transform) filters, Intel<sup>®</sup> Graphics Control Library, and Intel VA API.

Intel® 13<sup>th</sup> Gen Processors support the following transcoding features:

• High performance high quality flexible encoder for video editing and video archiving, lowerpower low latency encoder for video conferencing, wireless display, and gam streaming, lossless memory compression for media engine to reduce media power, high-quality Advanced Video Scaler (AVS) and low power Scaler and Format Converter.

Notes:

2. Single 8K at 60 Hz display, supported by monitors that accept dual DP input for tiled screen

<sup>1.</sup> Resolution support is subject to memory bandwidth availability

# 3.1.2 Display Emulation

Display emulation is supported using the HDMI ports so that the system may be remotely accessed in a headless configuration or be capable of tolerating display connectivity interruptions without the operating system redetecting and rearranging the overall display layout. The display emulation feature may be enabled in BIOS Setup with the following checkboxes:

- "Virtual display emulation": provides a 1280x1024 virtual display when no displays are connected to the system and provides an additional 1280x1024 virtual display if one display is attached to the system. If two displays are attached to the HDMI ports these displays will be enabled and no virtual displays will be provided.
- "Persistent display emulation": emulates that both displays are always connected to the system no matter their actual connection status. The EDID information from each display will remain programmed through S3, S4, S5 and G3 power states until the feature is disabled.
  - When "Persistent display emulation" is enabled another drop-down menu ("Inconsistent Display Device") will become visible that allows the user to select the behavior of the system when the display device EDID is inconsistent with the EDID stored by the system.
    - "Block boot" (default selection): the BIOS will display a warning message with options and will wait indefinitely for a user selection.
    - "Countdown": the BIOS will display a warning message with options and will wait 10 seconds before booting.

# NOTE

When using "Persistent display emulation" it would be expected behavior for the system not to properly drive displays different than those connected when the feature was enabled, as the EDID parameters of the initially connected displays are still being driven by the system. In order to retrain the system for different displays, the persistent display emulation feature must be disabled in the BIOS, the system rebooted, and then the persistent display emulation feature must be reenabled.

# 3.2 SATA Interface

The board provides the following SATA interfaces:

• One SATA 6.0 Gb/s combined Data and Power connector

The PCH provides independent SATA ports with a theoretical maximum transfer rate of 6 Gb/s. A point-to-point interface is used for host to device connections.

# 3.3 Real-Time Clock Subsystem

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery. The clock is accurate to  $\pm$  13 minutes/year at 25 °C with 3.3 VSB applied via the power supply 5 V STBY rail.

#### 

If the battery and AC power fail, date and time values will be reset and the user will be notified during the POST.

When the voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Figure 2 on page 19 shows the location of the battery.

System can power on from G3/AC power loss state without the Real-Time Clock battery.

# 3.4 LAN Subsystem

### 3.4.1 RJ-45 LAN Connector with Integrated LEDs

Two LEDs are built into the RJ-45 LAN connector (shown in Figure 6).

#### Figure 6. LAN Connector LED Locations

Table 5 describes the LED states when the board is powered up and the LAN subsystem is operating.

#### Table 5. LAN Connector LED States

LED	LED Color	LED State	Condition
		Off	LAN link is not established
Link	Green	Solid	LAN link is established
		Blinking	LAN activity is occurring
		Off	10/100 Mb/s data rate is selected
Data Rate	Green/Yellow	Yellow	1000 Mb/s data rate is selected
		Green	2500 Mb/s data rate is selected

# 3.5 Hardware Management Subsystem

# 3.5.1 Fan Monitoring

Fan monitoring can be implemented using third-party software.

# 3.5.2 System States and Power States

Table 6 describes the ACPI states supported by the processor.

State	Description
G0/S0/C0	<b>Full On:</b> CPU operating. Individual devices may be shut to save power. The different CPU operating levels are defined by Cx states.
GO/S0/Cx	<b>Cx State:</b> CPU manages C-states by itself and can be in lower power states.
G1	<b>Suspend-To-RAM (STR):</b> The system context is maintained in system DRAM, but power is shut to non-critical circuits. Memory is retained and refreshes continue. All external clocks are shut off; RTC clock and international oscillator clocks are still toggling.
G1/S4	<b>Suspend-To-Disk (STD):</b> The context of the system is maintained on the disk. All power is then shut to the system except to the logic required to resume. Externally appears the same as S5 but may have different wake events.
G2/S5	<b>Soft Off:</b> System context not maintained. All power is shut except for the logic required to restart. A full boot is required when waking.
G3	<b>Mechanical Off:</b> System context not maintained. All power shut except for the RTC. No "Wake" events are possible because the system does not have any power. This state occurs if the user removes the batteries, turns off a mechanical switch, or if the system power supply is at a level that is insufficient to power the "waking" logic.

#### Table 6. Systems States

#### 3.5.2.1 Wake-up Devices and Events

Table 7 lists the devices or specific events that can wake the computer from specific states.

Devices/events that wake up the system	from this sleep state	Comments
Power switch	S0iX, S4, S5 <sup>1</sup>	
RTC alarm	S0iX, S4, S5 <sup>1</sup>	Option for monitor to remain in sleep state
LAN	S0iX, S5 <sup>1, 3, 4</sup>	"S5 WOL after G3" is supported; monitor to remain in sleep state
WIFI	S0iX	
Bluetooth	SOiX	
USB	S0iX, S4, S5 <sup>1, 2, 3</sup>	Wake S4, S5 controlled by BIOS option (not after G3)
PCIe	SOiX, S4 <sup>1</sup>	Via WAKE; monitor to remain in sleep state
HDMI CEC	S0iX, S4, S5 <sup>1</sup>	Wake S4, S5 controlled by BIOS option

#### Table 7. Wake-up Devices and Events

Notes:

1. S4 implies operating system support only.

2. Will not wake from Deep S4/S5. USB S4/S5 Power is controlled by BIOS. USB S5 wake is controlled by BIOS. USB S4 wake is controlled by OS driver, not just BIOS option.

3. Windows Fast startup will block wake from LAN and USB from S5.

4. WoL from S4 via Magic Packet is not supported. For more information go to support.intel.com.

#### 

The use of these wake-up events from an ACPI state requires an operating system that provides full ACPI support. In addition, software, drivers, and peripherals must fully support ACPI wake events.

# 4 Technical Reference

# 4.1 Connectors and Headers

# 

Only the following connectors and headers have overcurrent protection: back panel USB Type A and Type C, front panel USB, internal USB headers, internal power header, and DC Vin jack.

All other connectors and headers are not overcurrent protected and should connect only to devices inside the computer's chassis, such as fans and internal peripherals. Do not use these connectors or headers to power devices external to the computer's chassis. A fault in the load presented by the external devices could cause damage to the computer, the power cable, and the external devices themselves.

*Furthermore, improper connection of USB header single wire connectors may eventually overload the overcurrent protection and cause damage to the board.* 

# 4.1.1 Signal Tables for the Connectors and Headers

Pin	Signal Name	Pin	Signal Name
1	+5V (2A total for pins 1, 2, 3, 4 (0.5A per pin))	2	+5V (2A total for pins 1, 2, 3, 4 (0.5A per pin))

Table 12. M.2 2242 Module (Mechanical Key B) Connector

#### 4.1.1.1 Front Panel Header (2.0 mm Pitch)

This section describes the functions of the front panel header. Table 13 lists the signal names of the front panel header. Figure 7 is a connection diagram for the front panel header.

Pin	Signal Name	Description	Pin	Signal Name	Description
1	HDD_POWER_LED	Pull-up 750Ω to +5V	2	POWER_LED_MAIN	[Out] Front panel LED (main color) Pull-up 300Ω to +5V
3	HDD_LED#	[Out] HDD activity LED	4	POWER_LED_ALT	[Out] Front panel LED (alt color)
5	GROUND	Ground	6	POWER_SWITCH#	[In] Power switch
7	RESET_SWITCH#	[In] Reset switch	8	GROUND	Ground
9	+5V_DC (1A) (Vcc)	VCC5 (1A current rating)	10	Кеу	No pin
11	5Vsby (2A)	5VSB (2A current rating)	12	3.3Vsby (1A)	3VSB (1A current rating)

Table 13. Front Panel Header (2.0 mm Pitch)

Figure 7. Connection Diagram for Front Panel Header (2.0 mm Pitch)

#### 4.1.1.1.1 Hard Drive Activity LED Header

Pins 1 and 3 can be connected to an LED to provide a visual indicator that data is being read from or written to a hard drive. Proper LED function requires a SATA hard drive or optical drive connected to an onboard SATA connector.

#### 4.1.1.1.2 Reset Switch Header

Pins 5 and 7 can be connected to a momentary single pole, single throw (SPST) type switch that is normally open. When the switch is closed, the board resets and runs the POST.

#### 4.1.1.1.3 Power/Sleep LED Header

Pins 2 and 4 can be connected to a one- or two-color LED. Table 14 and Table 15 show the possible LED states.

Table 14.	States for a	a One-Color	Power LED

LED State	Description
Off	Power off
Blinking	Standby
Steady	Normal operation

#### Table 15. States for a Dual-Color Power LED

LED State	Description
Off	Power off
Blinking (white)	Standby
Steady (white)	Normal operation

The LED behavior shown in Table 14 is default – other patterns may be set via BIOS setup.

#### 4.1.1.1.4 Power Switch Header

Pins 6 and 8 can be connected to a front panel momentary-contact power switch. The switch must pull the SW\_ON# pin to ground for at least 50 ms to signal the power supply to switch on or off (the time requirement is due to internal debounce circuitry on the board). At least two seconds must pass before the power supply will recognize another on/off signal.

#### 4.1.1.2 BIOS Security Jumper

# 

Do not move a jumper with the power on. Always turn off the power and unplug the power cord from the computer before changing a jumper setting. Otherwise, the board could be damaged.

Figure 8 shows the location of the BIOS Security Jumper. The 3-pin jumper determines the BIOS Security program's mode.

Figure 8. Location of the BIOS Security Jumper

Table 16 describes the jumper settings for the three modes: normal, lockdown, and configuration.

Function/Mode	Jumper Setting	Configuration
Normal	1-2	The BIOS uses current configuration information and passwords for booting.
Lockdown	2-3	<ul> <li>The BIOS uses current configuration information and passwords for booting, except:</li> <li>All POST Hotkeys are suppressed (prompts are not displayed and keys are not accepted. For example, F2 for Setup, F10 for the Boot Menu).</li> <li>Power Button Menu is not available (see Section 5.3.2 Power Button Menu).</li> <li>BIOS updates are not available except for automatic Recovery due to flash corruption.</li> </ul>

Table 16. BIOS Security Jumper Settings

Configuration	None	BIOS Recovery Update process if a matching *.bio file is found. Recovery
		Update can be cancelled by pressing the Esc key.
		If the Recovery Update was cancelled or a matching * bio file was not
		found, a Config Menu will be displayed. The Config Menu consists of the
		following (followed by the Power Button Menu selections):
		[1] Suppress this menu until the BIOS Security Jumper is
		replaced.
		[2] Clear BIOS User and Supervisor Passwords.
		[3] Reset Intel <sup>®</sup> AMT to default factory settings.
		[4] Clear Trusted Platform Module.
		WARNING! Data encrypted with the TPM will no longer be
		accessible if the TPM is cleared.
		[F2] Intel <sup>®</sup> Visual BIOS.
		[F4] BIOS Recovery.
		See Section 5.3.2 Power Button Menu

# 4.1.1.3 Intel® Management Engine BIOS Extension (Intel® MEBX) Reset Header

The Intel<sup>®</sup> MEBX reset header (see Figure 1) allows you to reset the CMOS values to the factory defaults in situations when the system may have become unresponsive, such as after a failed BIOS update. It achieves this by placing a low on the reset pin of the Real Time Clock (RTC).

Momentarily shorting pins 1 and 2 with a jumper will accomplish reset CMOS values to default.

**CAUTION** Always turn off the power and unplug the power cord from the computer before installing an MEBX reset jumper. The jumper must be removed before reapplying power. The system must be allowed to reach end of POST before reset is complete. Otherwise, the board could be damaged.

**NOTE** After using the MEBX Reset, a "CMOS battery failure" warning will occur during the next POST. This is expected and does not indicate a component failure.

**CAUTION** Care must be taken to avoid inadvertent shorting of the bottom cover screw to the header during bottom cover reassembly. Assemble the bottom cover before reapplying power to the system.

#### 4.1.1.4 Fan Header Current Capability

Table 17 lists the current capability of the fan headers.

#### Table 17. Fan Header Current Capability

Fan Header	Maximum Available Current
Processor fan	1 A

#### 4.1.1.5 **Power Supply Connectors**

**NOTE** External power voltage, 12-20 (±5%) V DC, is dependent on the type of power supply used. System power requirements will depend on actual system configurations chosen by the integrator, as well as end user expansion preferences. It is the system integrator's responsibility to ensure an appropriate power budget for the system configuration is properly assessed based on the system-level components chosen.

# 🛝 CAUTION

There is no isolation circuitry between the external DC jack and the internal 2 x 2 power connector. It is the system integrator's responsibility to ensure no more than one power supply unit is or can be attached to the board at any time and to ensure the external DC jack is covered if the internal 2 x 2 power connector is to be used. Simultaneous connection of both external and internal power supply units could result in potential damage to the board, power supplies, or other hardware.

The board has the following power supply connectors:

- External Power Supply the board can be powered through a 12-20 V DC connector on the back panel. The back-panel DC connector is compatible with a 5.5 mm/OD (outer diameter) and 2.5 mm/ID (inner diameter) plug, where the inner contact is +12-20 V DC and the shell is GND. The maximum current rating is 10 A.
- Internal Power Supply the board can alternatively be powered via the internal 12-20 V DC 2 x 2 power connector, where pins 1 and 2 are +12-20 V DC and pins 3 and 4 are GND. The maximum current rating is 10 A (5A per pins 1 and 2).

The connector used is Molex Micro-Fit (3mm pitch), right-angled, 4-pos/dual row (2x2).

Table 18. Internal Power Supply Connector Pins

Pins	Signal Name
1,2	+12-20V
3,4	GND

Figure 9. Connection Diagram for the Internal Power Supply Connector

# 4.2 Mechanical Considerations

# 4.2.1 Chassis Images

Figure 10. Chassis Image Front

Figure 11. Chassis Image Back Panel

#### 4.2.2 Form Factor

Figure 12 illustrates the mechanical form factor for the board. Dimensions are given in inches [millimeters]. The outer dimensions are 104.1 millimeters (front to back) by 101.6 millimeters (side to side).

Figure 12. Board Dimensions

Figure 13 shows the height dimensions of the board. Dimensions are in mm.

# 4.3 Thermal Considerations

# 

Failure to ensure appropriate airflow may result in reduced performance of both the processor and/or voltage regulator or, in some instances, damage to the board.

All responsibility for determining the adequacy of any thermal or system design remains solely with the system integrator. Intel makes no warranties or representations that merely following the instructions presented in this document will result in a system with adequate thermal performance.

#### 

Ensure that the ambient temperature does not exceed the board's maximum operating temperature. Failure to do so could cause components to exceed their maximum case temperature and malfunction. For information about the maximum operating temperature, see the environmental specifications in Section 4.5.

# 

Ensure that proper airflow is maintained in the processor voltage regulator circuit. Failure to do so may result in shorter than expected product lifetime.

# 4.4 Reliability

The demonstrated Mean Time Between Failures (MTBF) is done through 24/7 testing. Full Intel<sup>®</sup> NUC systems in chassis with memory, SSD or HDD, and a fan are ran at 100% on time for 90 days continuously while running system wide stress inducing software in a 40 °C ambient air temperature chamber. The demonstrated MTBF for Intel NUC Board NUC13AN is >50,000 hours.

# 4.5 Environmental

Table 19 lists the environmental specifications for the board.

# 

If the external ambient temperature exceeds 40 °C, further thermal testing is required to ensure components do not exceed their maximum operating temperature.

Parameter	Specification
Temperature	
Sustained Storage Limits (i.e. warehouse)	-20 °C to +40 °C
Short Duration Limits (i.e. shipping)	-40 °C to +60 °C
Ambient Operating – NUC Kit*	Up to 0 °C to +40 °C
Ambient Operating – NUC Board*	0 °C to +50 °C (Local ambient temperature inside the chassis)
	* Processor performance may automatically decrease when the system operates in the top 5 °C of the ambient operating temperature ranges above.

#### **Table 19. Environmental Specifications**

Shock (Board)				
Unpackaged	50 g trapezoio	50 g trapezoidal waveform		
	Velocity chan	ge of 170 inches/s <sup>2</sup>		
Packaged		Free fall package drop machine set to the height determined by the weight of the package.		
	Product Weight (pounds)	Non-palletized Product drop height (inches)	Palletized drop heights (single product) (inches)	
	<20	36	N/A

	Input acceleration is 3.13g RMS
	·
Vibration (System)	
Unpackaged	Random profile 5 Hz @ 0.001 g^2/Hz to 20 Hz @ 0.01 g^2/Hz(slope up)
	20 Hz to 500 Hz @ 0.01 g^2/Hz (flat)
	Input acceleration is 2.20g RMS
Packaged	Random Profile: 0.001 g^2/Hz to 20 Hz @ 0.01 g^2/Hz (slope up)
	20 Hz to 500 Hz @ 0.01 g@/Hz (flat)
	Input acceleration is 2.20g RMS

Note: The operating temperature of the board may be determined by measuring the air temperature from the junction of the heatsink fins and fan, next to the attachment screw, in a closed chassis, while the system is in operation.

Note: Before attempting to operate this board, the overall temperature of the board must be above the minimum operating temperature specified. It is recommended that the board temperature be at least room temperature before attempting to power on the board. The operating and non-operating environment must avoid condensing humidity.

# **5** Overview of BIOS Features

# 5.1 Introduction

The board uses an Intel AMI BIOS core that is stored in the Serial Peripheral Interface Flash Memory (SPI Flash) and can be updated through multiple methods (see Section 5.2). The SPI Flash contains the BIOS Setup program, POST, the PCI auto-configuration utility, LAN EEPROM information, and Plug and Play support. The SPI Flash includes a 32 MB flash memory device.

The BIOS Setup program can be used to view and change the identification information and the BIOS settings for the system. The BIOS Setup program is accessed by pressing <F2> after the POST memory test beings and before the operating system boots.

# 5.2 **BIOS Updates**

The BIOS can be updated using one of the following methods:

- 1. Express BIOS (Windows-based) Update
- 2. F7 Update
- 3. Power Button Menu Update
- 4. UEFI Shell Update

More information and instructions on how to use each of these methods can be found at <u>BIOS</u> <u>Update and Recovery Instructions</u>. All BIOS update files for Intel NUCs are available on <u>Download</u> <u>Center</u>.

# 5.2.1 BIOS Recovery

It is unlikely that anything will interrupt a BIOS update; however, if an interruption occurs the BIOS could be unstable. Table 20 lists the drives and media types that can be used for BIOS recovery. The BIOS recovery media does not need to be made bootable. More information about BIOS recovery methods and instructions can be found at <u>BIOS Update and Recovery Instructions</u>.

Table 20. Acceptable Drives/Media Type for BIOS Recovery

Media Type <sup>(Note)</sup>	Can be used for BIOS recovery?
Hard disk drive (connected to SATA or USB)	Yes
USB flash drive	Yes
NVME SSD (M.2 interface)	Yes

NOTE:

**NOTE** Supported file systems for BIOS recovery: NTFS (sparse, compressed, or encrypted files are not supported), FAT32, EXT

# 5.3 Boot Options

In the BIOS Setup program, the user can choose to boot from a hard drive, removeable driver, or the network. The default setting is for the hard drive to be the first boot device, the removeable drive second, and the network third.

NOTE

**NOTE** The network can be selected as a boot device. This selection allows booting from the onboard LAN or a network add-in card with a remote boot ROM installed. Pressing the <F12> key during POST automatically forces booting from the LAN. To use this key during POST, the User Access Level in the BIOS Setup program's Security menu must be set to Full.

# 5.3.1 Boot Device Selection During Post

Pressing the <F10> key during POST causes a boot device menu to be displayed. The menu displays the list of available boot devices.

### 5.3.2 Power Button Menu

As an alternative to Configuration Mode or normal POST hotkeys, the user can use the power button to access a menu with BIOS and boot options. The Power Button Menu is accessible via the following sequence:

- 1. System is in S4/S5 (not G3).
- 2. User pushes the power button and holds it down for 3 seconds.
- 3. The Power Button LED will be white color for the first 3 seconds. After 3 seconds, switch Power Button LED to yellow color to signal the user to release the power button.
- 4. User releases the power button before the 4-second shutdown override. If this boot path is taken, the BIOS will use default settings, ignoring settings in VPD where possible. At the point where Setup Entry/Boot would be in the normal boot path, the BIOS will display the following prompt and wait for a keystroke:

If an unrecognized key is hit, then the BIOS will do nothing and wait for another keystroke. If one of the listed hotkeys is hit, the BIOS will follow the indicated boot path. Password requirements must still be honored.

Keystroke	Option	Description
[ESC]	Normal Boot	
[F2]	BIOS Setup Menu	
[F3]	Disable Fast Boot	Note: Will only be displayed if at least one Fast Boot optimization is enabled.
		If Disable Fast Boot is selected, the BIOS will disable all Fast Boot optimizations and reset the system.
[F4]	BIOS Recovery	The BIOS will search for a matching .CAP file from the \EFI\Intel folder in the supported media with the supported file system. If a matching recovery capsule is found, the BIOS will display the following:
		BIOS will Recover to <biosid> in 20 seconds.[ESC] Cancel RecoveryRecovery will proceed if not cancelled via the ESC key within 20 seconds.The BIOS shall display the recovery progress. If a BIOS .CAP file was notdetected (or the BIOS Recovery was cancelled) then the BIOS will resetthe system and continue normally to POST.</biosid>
[F5]	Restore BIOS Settings	The BIOS will restore the current setup settings and the current defaults to the build time defaults in the case of a boot issue caused by setup variable changes.

**Table 21. Power Button Menu Options** 

[F7]	Update BIOS	BIOS Update during the BDS phrase. The BIOS will update independent of any OS loading and provides a menu UI accessible during boot up. This is not a recovery tool and will not overwrite a corrupt BIOS or ME firmware.
[F9]	Remote Assistance	Note: Will only be displayed if Remote Assistance is supported.
[F10]	Enter Boot Menu	
[F12]	Network Boot	

# 5.4 Hard Disk Drive Password Security Feature

The Hard Disk Drive Password Security feature blocks ready and write access to the hard disk drive until the correct password is given. Hard disk drive passwords are set in BIOS Setup and are prompted for BIOS POST. For convenient support for resuming from S3, the system BIOS will automatically unlock drives on resume from S3. Valid password characters are A-Z, a-z, and 0-9. Passwords may be up to 32 characters in length.

The User hard disk drive password, when set, will be required on each power cycle until the Master Key or User hard disk drive password is submitted.

The Master Key hard disk drive password, when set, will not lock the drive. The Master Key hard disk drive password exists as an unlock override if the User hard disk drive password is forgotten. Only the User hard disk drive password, when set, will cause a hard disk to be locked on a system power cycle. Table 22 show the effects of setting the hard disk drive passwords.

Table 22. Master Ke	y and User Hard Disk Driv	e Password Functions
---------------------	---------------------------	----------------------

Password Set	Password During Boot
Neither	None
Master only	None
User only	User only
Master and User Set	User

During every POST, if a User hard disk drive password is set, POST execution will pause with the following prompt to force the User to enter the Master Key or the User hard disk drive password:

#### "Enter Hard Disk Drive Password:"

Upon successful entry of the Master Key or User hard disk drive password, the system will continue with normal POST.

If the hard disk drive password is not correctly entered, the system will go back to the above prompt. The User will have three attempts to correctly enter the hard disk drive password. After the third unsuccessful attempt, the system will halt with the following message:

#### "Hard Disk Drive Password Entry Error"

A manual power cycle will be required to resume system operation.

**NOTE** As implemented on the Intel NUC13AN board, the hard disk drive password security feature is only supported on the SATA Port 0 (M.2) or the SATA port 1 (onboard SATA connector).

# 5.5 **BIOS Security Features**

The BIOS includes security features that restrict access to the BIOS Setup program and who can boot the computer. A Supervisor and User password can be set for the BIOS Setup program and for botting the computer, with the following restrictions:

- The Supervisor password gives unrestricted access to view and change all the Setup options in the BIOS Setup program. This is Supervisor Mode.
- The User password gives restricted access to view and change Setup options in the BIOS Setup program. This is User Mode.
- If only the Supervisor password is set, pressing the <Enter> key at the password prompt of the BIOS Setup program allows the user restricted access to Setup.
- If both the Supervisor and User passwords are set, users can enter either the Supervisor or User password to access Setup. Users have access to Setup regardless to which password is used.
- Setting the User password restricts who can boot the computer. The password prompt will be displayed before the computer boots. If only the Supervisor password is set, the computer boots without asking for a password. If both passwords are set, the user can enter either password to boot the computer.
- For enhanced security, use different passwords for the Supervisor and User passwords.
- Valid password characters are A-Z, a-z, 0-9, and special characters. Passwords may be up to 20 characters in length.
- To clear a set password, enter a blank password after entering the existing password.

Table 23 shows the effects of setting the Supervisor password and User password. This table is for reference only and is not displayed on the screen.

Password Set	Supervisor Mode	User Mode	Setup Options	Password to Enter Setup	Password During Boot
Neither	Any user can change all options	Any user can change all options	None	None	None
Supervisor only	Can change all options	Can change a limited number of options	Supervisor Password	Supervisor	None
User only	N/A	Can change all options	Enter Password Clear User Password	User	User
Supervisor and User set	Can change all options	Can change a limited number of options	Supervisor Password Enter Password	Supervisor or User	Supervisor or User

 Table 23. Supervisor and User Password Functions

# 5.6 BIOS Error Messages

Table 24 lists the error messages and provides a brief description of each.

Error Message	Explanation
CMOS Battery Failure	The battery may be losing power. Replace the battery soon.
CMOS Checksum Error	The CMOS checksum is incorrect. CMOS memory may have been corrupted. Run Setup to reset values.
Memory Size Decreased	Memory size has decreased since the last boot. If no memory was removed, then the memory may be bad.

#### Table 24. BIOS Error Messages

CMOS Timer Not Set	The battery may be losing power. Replace the battery soon.
Processor Thermal Trip	Processor overheated.
Auto RTC Reset	The system triggers RTC clear to recover the system back to the normal condition from consecutive boot failure.
