INFORMATION IN THIS DOCUMENT IS PROVIDED IN CONNECTION WITH INTEL® PRODUCTS. NO LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE, TO ANY INTELLECTUAL PROPERTY RIGHTS IS GRANTED BY THIS DOCUMENT. EXCEPT AS PROVIDED IN INTEL’S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER, AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT. Intel products are not intended for use in medical, life saving, or life sustaining applications. Intel may make changes to specifications and product descriptions at any time, without notice.

Intel Desktop Board DQ67SW may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order.

Copies of documents which have an ordering number and are referenced in this document, or other Intel literature, may be obtained from Intel Corporation by going to the World Wide Web site at: http://www.intel.com/ or by calling 1-800-548-4725.

Preface

This Product Guide gives information about board layout, component installation, BIOS update, and regulatory requirements for Intel® Desktop Board DQ67SW.

Intended Audience

The Product Guide is intended for technically qualified personnel. It is not intended for general audiences.

Use Only for Intended Applications

All Intel Desktop Boards are evaluated as Information Technology Equipment (I.T.E.) for use in personal computers (PC) for installation in homes, offices, schools, computer rooms, and similar locations. The suitability of this product for other PC or embedded non-PC applications or other environments, such as medical, industrial, alarm systems, test equipment, etc. may not be supported without further evaluation by Intel.

Document Organization

The chapters in this Product Guide are arranged as follows:

1 Desktop Board Features: a summary of product features
2 Installing and Replacing Desktop Board Components: instructions on how to install the Desktop Board and other hardware components
3 Updating the BIOS: instructions on how to update the BIOS
A Error Messages and Indicators: information about BIOS error messages and beep codes
B Regulatory Compliance: describes the board’s adherence to safety standards and EMC regulations and its product certifications

Conventions

The following conventions are used in this manual:

⚠️ CAUTION
Cautions warn the user about how to prevent damage to hardware or loss of data.

NOTE
Notes call attention to important information.
## Terminology

The table below gives descriptions of some common terms used in the product guide.

1 Desktop Board Features

This chapter briefly describes the features of Intel® Desktop Board DQ67SW. Table 1 summarizes the major features of the Desktop Board.

<table>
<thead>
<tr>
<th>Table 1. Feature Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Form Factor</strong></td>
</tr>
</tbody>
</table>
| **Processor Support** | Intel® Core™ i7, Intel® Core™ i5, Intel® Core™ i3, and Intel® Pentium processors in an LGA1155 package:  
  – Integrated graphics processing (processors with Intel® Graphics Technology)  
  – External graphics interface controller  
  – Integrated memory controller |
| **Chipset** | Intel® Q67 Express Chipset consisting of the Intel® Q67 Express Platform Controller Hub (PCH) |
| **Memory Support** | Four 240-pin DDR3 SDRAM Dual Inline Memory Module (DIMM) sockets  
  • Support for DDR3 1333 MHz and DDR3 1066 MHz DIMMs  
  • Support for 1 Gb, 2 Gb, and 4 Gb memory technology  
  • Support for up to 32 GB of system memory with four DIMMs using 4 Gb memory technology  
  • Support for non-ECC memory |
| **Graphics Support** | Intel® Q67 Express Chipset consisting of the Intel® Q67 Express Platform Controller Hub (PCH) |
| **Audio** | Intel® High Definition Audio:  
  • Realtek® ALC888S audio codec  
  • DisplayPort* digital audio support  
  • S/PDIF audio header  
  • Front panel audio header  
  • Mono speaker header |
| **Expansion Capabilities** | One PCI Express 2.0 x16 add-in card connector  
  One PCI Express 2.0 x4 add-in card connector  
  One PCI Express 2.0 x1 add-in card connector  
  One Conventional PCI* bus connector |

continued
Table 1. Feature Summary (continued)

| Peripheral Interfaces | • Fourteen USB ports:  
|                       |   — Two USB 3.0 ports are implemented with stacked back panel connectors (blue)  
|                       |   — Four USB 2.0 ports are implemented with stacked back panel connectors (black)  
|                       |   — Eight USB 2.0 front panel ports are implemented through four dual-port internal headers  
|                       | • Six SATA interfaces through the Intel Q67 Express Chipset with Intel® Rapid Storage Technology RAID support:  
|                       |   — Two internal SATA 6 Gb/s ports (blue)  
|                       |   — Two internal SATA 3 Gb/s ports (black)  
|                       |   — Two backpanel eSATA 3 Gb/s ports (red)  
|                       | • One serial port header  
|                       | • Two IEEE 1394a ports:  
|                       |   — One IEEE 1394a port header  
|                       |   — One backpanel IEEE 1394a port  
| LAN Support | • Intel® 82579LM Gigabit (10/100/1000 Mb/s) Ethernet LAN controller with support for:  
|             |   • Intel® Active Management Technology (Intel® AMT) 7.0  
|             |   • ASF 2.0  
| Legacy I/O | • Nuvoton® W83677HG-i I/O controller for hardware management and serial port support  
| BIOS | • Intel® BIOS resident in an SPI Flash device  
|       | • Support for Advanced Configuration and Power Interface (ACPI), Plug and Play, and SMBIOS  
| Instantly Available PC Technology | • Support for PCI Local Bus Specification, Revision 2.2  
|                                      | • Support for PCI Express Base Specification, Revision 2.0  
|                                      | • Suspend to RAM support  
|                                      | • Wake on Conventional PCI, PCI Express, LAN, front panel, serial, and USB ports  
| Hardware Monitoring | • Hardware monitoring through the Nuvoton I/O controller  
|                     | • Voltage sense to detect out of range power supply voltages  
|                     | • Thermal sense to detect out of range thermal values  
|                     | • Three fan headers using PWM control  
|                     | • 4-pin headers for processor, front chassis, and rear chassis fans  
|                     | • 4-wire and 3-wire (linear) fan speed control support for front and rear chassis fans  
|                     | • Support for Platform Environmental Control Interface (PECI)  
| Intel® vPro™ Technology | • Intel® Active Management Technology (Intel® AMT) 7.0  
|                        | • Intel® Trusted Execution Technology (Intel® TXT)  
|                        | • Intel® Fast Call for Help (Intel® FCFH)  
|                        | • Intel® Virtualization Technology (Intel® VT)  
|                        | • Intel® Virtualization for Directed I/O (Intel® VT-d)  
|                        | • Hardware-based Keyboard-Video-Mouse (KVM)  

10
**Supported Operating Systems**

The Desktop Board supports the following operating systems:

- Microsoft Windows* 7 Ultimate 64-bit edition
- Microsoft Windows 7 Ultimate 32-bit edition
- Microsoft Windows 7 Professional 64-bit edition
- Microsoft Windows 7 Professional 32-bit edition
- Microsoft Windows 7 Home Premium 64-bit edition
- Microsoft Windows 7 Home Premium 32-bit edition
- Microsoft Windows 7 Starter 64-bit edition
- Microsoft Windows 7 Starter 32-bit edition
- Microsoft Windows Vista* Ultimate 32-bit edition
- Microsoft Windows Vista Business 32-bit edition
- Microsoft Windows Vista Home Premium 32-bit edition
- Microsoft Windows Vista Home Basic 32-bit edition
- Microsoft Windows Vista Ultimate 64-bit edition
- Microsoft Windows Vista Business 64-bit edition
- Microsoft Windows Vista Home Premium 64-bit edition
- Microsoft Windows Vista Home Basic 64-bit edition
- Microsoft Windows* XP Media Center Edition 2005
- Microsoft Windows XP Professional
- Microsoft Windows XP Professional x64 Edition
- Microsoft Windows XP Home
Desktop Board Components

Figure 1 shows the approximate location of the major components on Intel Desktop Board DQ67SW.

Online Support

For more information on Intel Desktop Board DQ67SW consult the following online resources:

- Available configurations for Intel Desktop Board DQ67SW: [http://ark.intel.com](http://ark.intel.com)
- Supported processors: [http://processormatch.intel.com](http://processormatch.intel.com)
- Integration information: [http://www.intel.com/support/go/buildit](http://www.intel.com/support/go/buildit)

Processor

⚠️ **CAUTION**

Failure to use an appropriate power supply and/or not connecting the 12 V (2 x 2 pin) power connector to the Desktop Board may result in damage to the board, or the system may not function properly.

Intel Desktop Board DQ67SW supports the Intel Core i7, Intel Core i5, Intel Core i3, and Intel Pentium processors in the LGA1155 package. Processors are not included with the Desktop Board and must be purchased separately. The processor connects to the Desktop Board through an LGA1155 socket.

For information on supported processors for Intel Desktop Board DQ67SW, go to [http://processormatch.intel.com](http://processormatch.intel.com).
Intel® Q67 Express Chipset

The Intel Q67 Express Chipset, consisting of the Intel Q67 Platform Controller Hub (PCH), provides interfaces to the processor and the USB, SATA, LPC, audio, network, display, Conventional PCI, and PCI Express interfaces. The PCH is a centralized controller for the board’s I/O paths.

Main Memory

**NOTE**

To be fully compliant with all applicable Intel® SDRAM memory specifications, the board should be populated with DIMMs that support the Serial Presence Detect (SPD) data structure. If your memory modules do not support SPD, you will see a notification to this effect on the screen at power up. The BIOS will attempt to configure the memory controller for normal operation.

The board has four DIMM sockets and supports the following memory features:

- Two independent memory channels with interleaved mode support
- Support for non-ECC, unbuffered, single-sided or double-sided DIMMs with x8 organization
- 32 GB maximum total system memory (with 4 Gb memory technology)
- Minimum total system memory: 1 GB using 1 Gb x8 modules
- Serial Presence Detect
- DDR3 1333 MHz and DDR3 1066 MHz SDRAM DIMMs

**NOTE**

32-bit operating systems are limited to a maximum of 4 GB of memory. These operating systems will report less than 4 GB because of the memory used by add-in graphics cards and other system resources.
Graphics Subsystem

The board supports either integrated graphics (Intel Graphics Technology) or PCI Express 2.0 x16 graphics.

Integrated Graphics

The board supports integrated graphics through the Intel® Flexible Display Interface (Intel® FDI) for processors with Intel Graphics Technology. When using a processor with integrated graphics, the board will support only two of the three integrated graphics interfaces simultaneously: DisplayPort, DVI-I, DVI-D

NOTE

The board will support up to two integrated graphics interfaces plus one PCI Express Graphics card simultaneously with required changes to the BIOS setup.

DisplayPort*

DisplayPort is a digital communication interface that utilizes differential signaling to achieve a high bandwidth bus interface designed to support connections between PCs and monitors, projectors, and TV displays. DisplayPort is suitable for display connections between consumer electronics devices such as high definition optical disc players, set top boxes, and TV displays. DisplayPort output can be converted to High-Definition Multimedia Interface* (HDMI*) output using a DisplayPort-HDMI converter.

DisplayPort’s maximum supported display resolution is 2560 x 1600 at a 60 Hz refresh rate with a 16:10 aspect ratio (WQXGA). DisplayPort 1.1 adds support for High Bandwidth Digital Content Protection (HDCP) version 1.3 which enables viewing of protected content from Blu-ray Disc* and HD-DVD optical media over DisplayPort 1.1 connections.

For more information about DisplayPort technology, go to http://www.displayport.org.

Digital Visual Interface

Intel Desktop Board DQ67SW supports Digital Visual Interface (DVI) displays with two back panel ports: a DVI-D port and a DVI-I port.

The DVI-I port supports both digital and analog DVI displays. The maximum supported resolution is 2048 x 1536 at a 75 Hz refresh rate (QXGA). The DVI-I port is compliant with the DVI 1.0 specification. DVI analog output from the DVI-I port can be converted to VGA for viewing on a VGA display using a DVI-VGA converter.

The DVI-D port supports only digital DVI displays. The maximum supported resolution is 2048 x 1536 at a 75 Hz refresh rate (QXGA). The DVI-D port is compliant with the DVI 1.0 specification.
PCI Express* x16 Graphics

The Intel Core i7, Intel Core i5, Intel Core i3, and Intel Pentium processors in an LGA1155 socket support discrete add-in graphics cards via the PCI Express 2.0 x16 add-in card connector. The board supports the following PCI Express speeds:

- PCI Express 2 frequency of 2.5 GHz which results in 5.0 Gb/s in each direction (500 MB/s) per lane. The maximum theoretical bandwidth on the interface is 8 GB/s in each direction, simultaneously, when operating in x16 mode.
- PCI Express 1 frequency of 1.25 GHz resulting in 2.5 Gb/s each direction (250 MB/s) per lane. The maximum theoretical bandwidth on the interface is 4 GB/s in each direction, simultaneously, when operating in x16 mode.

Audio Subsystem

The board supports Intel High Definition Audio through a Realtek ALC888S audio codec as well as through the DisplayPort interface.

The Realtek ALC888S-based audio subsystem provides the following features:

- 8-channel audio with independent multi-streaming stereo
- Advanced jack sense for the back panel audio connectors that enables the audio codec to recognize the device that is connected to an audio port. The back panel audio connectors are capable of retasking according to the user's definition, or can be automatically switched depending on the recognized device type.
- Stereo input and output via back panel connectors
- Headphone and Mic in functions for front panel audio connectors
- A signal-to-noise (S/N) ratio of 90 dB

The board provides onboard audio headers and back panel connectors.

The onboard audio headers include the following:

- Front panel audio (a 2 x 5 pin header that provides headphone and mic in signals for front panel audio connectors)
- S/PDIF audio header (1 x 4 pin header)
- Internal mono speaker header (1 x 2 pin header)

Front panel headphone output is supported by a separate audio channel pair, allowing multi-streaming audio configurations such as simultaneous 6-channel (5.1) surround sound playback and stereo audio conferencing (through speakers connected to the back panel audio connectors and a headset connected to front panel audio connectors).

The onboard internal mono speaker header allows connection to an internal, low-power speaker for basic system sound capability. The subsystem is capable of driving a speaker load of 8 Ω at 1 W (rms) or 4 Ω at 1.5 W (rms).

The onboard S/PDIF header allows connection to coaxial or optical adapters for digital audio output.

The back panel audio connectors are configurable through the audio device drivers. Audio software and drivers are available from http://downloadcenter.intel.com/.
LAN Subsystem

The LAN subsystem includes:
- Intel 82579LM Gigabit (10/100/1000 Mb/s) Ethernet LAN controller with support for:
  - Intel AMT 7.0
  - ASF 2.0
- RJ-45 LAN connector with integrated status LEDs

LAN software and drivers are available at [http://downloadcenter.intel.com/](http://downloadcenter.intel.com/).

Two LEDs are built into the RJ-45 LAN connector located on the back panel (see Figure 2). These LEDs indicate the status of the LAN as shown in Table 3.

USB Support

The Desktop Board supports USB 3.0 and USB 2.0. USB 3.0 is supported via two USB 3.0 ports (blue) on the back panel. USB 3.0 ports are backward compatible with USB 2.0 and USB 1.1 devices. The USB 3.0 ports are SuperSpeed, high-speed, full-speed, and low-speed capable. USB 3.0 support requires both an operating system and drivers that fully support USB 3.0 transfer rates.

There are 12 USB 2.0 ports (four ports routed to back panel connectors (black) and eight ports routed to four onboard headers). The USB 2.0 ports are high-speed, full-speed, and low-speed capable. USB 2.0 support requires both an operating system and drivers that fully support USB 2.0 transfer rates.

NOTE

Intel recommends connecting USB keyboard and mouse devices to USB 2.0 ports (black). Operating system installation may be interrupted if keyboard and mouse devices are connected to the SuperSpeed USB 3.0 ports (blue) due to the lack of native USB 3.0 driver support from the operating system. The device driver for the USB 3.0 host controller must be installed from the included Intel® Express Installer Driver and Software DVD before it can be operational in the operating system.
SATA Support

The board provides six SATA channels, through the PCH, which support one device per channel:

- Two internal SATA 6.0 Gb/s connectors (blue)
- Two internal SATA 3.0 Gb/s connectors (black)
- Two external SATA (eSATA) 3.0 Gb/s connectors (red) on the back panel for external connections

SATA RAID

The Intel Q67 PCH supports Intel® Rapid Storage Technology (Intel® RST) which enables the following RAID (Redundant Array of Independent Drives) levels:

- RAID 0 - data striping
- RAID 1 - data mirroring
- RAID 0+1 (or RAID 10) - data striping and mirroring
- RAID 5 - distributed parity

NOTE

In order to use supported RAID features, you must first enable RAID in the BIOS. Also, during Microsoft Windows XP installation, you must press F6 to install the RAID drivers. See your Microsoft Windows XP documentation for more information about installing drivers during installation. Both Microsoft Windows Vista and Microsoft Windows 7 include the necessary RAID drivers for both AHCI and RAID without the need to install separate RAID drivers using the F6 switch in the operating system installation process.

Intel® Rapid Recover Technology

The board incorporates Intel® Rapid Recover Technology (Intel® RRT). Intel RRT is a feature of Intel RST. Intel RRT uses RAID 1 (mirroring) functionality to copy data from a designated master drive to a designated recovery drive. The master drive data can be copied to the recovery drive either continuously or on request.

When using the continuous update policy, changes made to the data on the master drive while the recovery drive is disconnected or offline are automatically copied to the recovery drive when it is reconnected. When using the on request update policy, the master drive data can be restored to a previous state by copying the data on the recovery drive back to the master drive.
Expandability

Intel Desktop Board DQ67SW provides the following expansion capability:

- One PCI Express 2.0 x16 interface
- One PCI Express 2.0 x4 interface
- One PCI Express 2.0 x1 interface
- One Conventional PCI bus interface

Legacy I/O

The board’s Legacy I/O Controller provides the following legacy features:

- One serial port header
- Serial IRQ interface compatible with serialized IRQ support for Conventional PCI bus systems
- Intelligent power management, including a programmable wake-up event interface
- Conventional PCI bus power management support

The BIOS Setup program provides configuration options for the Legacy I/O controller.

BIOS

The BIOS provides the Power-On Self-Test (POST), the BIOS Setup program, and the PCI/PCI Express and SATA auto-configuration utilities. The BIOS is stored in the Serial Peripheral Interface (SPI) Flash memory device.

The BIOS can be updated by following the instructions in Chapter 3 starting on page 67.
**SATA Auto Configuration**

If you install a SATA device (such as a hard disk drive) in your computer, the auto-configuration utility in the BIOS automatically detects and configures the device for your computer. You do not need to run the BIOS Setup program after installing a SATA device. You can override the auto-configuration options by specifying manual configuration in the BIOS Setup program.

**PCI*/PCI Express Auto Configuration**

If you install a Conventional PCI or PCI Express add-in card in your computer, the PCI/PCI Express auto-configuration utility in the BIOS automatically detects and configures the resources (IRQs, DMA channels, and I/O space) for that add-in card. You do not need to run the BIOS Setup program after you install a Conventional PCI or PCI Express add-in card.

**BIOS Security Passwords**

The BIOS includes security features that restrict whether the BIOS Setup program can be accessed and who can boot the computer. A supervisor password and a user password can be set for the BIOS Setup and for booting the computer, with the following restrictions:

- The supervisor password gives unrestricted access to view and change all Setup options. If only the supervisor password is set, pressing <Enter> at the password prompt of Setup gives the user restricted access to Setup.
- If both the supervisor and user passwords are set, you must enter either the supervisor password or the user password to access Setup. Setup options are then available for viewing and changing depending on whether the supervisor or user password was entered.
- Setting a user password restricts who can boot the computer. The password prompt is displayed before the computer is booted. If only the supervisor password is set, the computer boots without asking for a password. If both passwords are set, you can enter either password to boot the computer.

For instructions on resetting the password, go to Clearing Passwords on page 59.
Hard Disk Drive Passwords

NOTE

On this board, the Hard Disk Drive Password Security feature is only supported on SATA port 0. Since the passwords are stored on the hard disk drive, if the drive is relocated to another SATA port or computer that does not support the Hard Disk Drive Password Security feature, the drive will not be accessible.

The board’s Hard Disk Drive Password Security feature blocks read and write accesses to the hard disk drive until the correct password is entered. Hard disk drive passwords are set in BIOS Setup and are prompted for during the POST. For convenient support of ACPI S3 resume, the system BIOS automatically unlocks drives on resume from S3.

The User hard disk drive password, when set, will be required upon each power cycle until the Master Key or User hard disk drive password is entered.

The Master Key hard disk drive password, when set, will not lock the hard disk drive. The Master Key hard disk drive password is an unlock override that can be used in the event that the User hard disk drive password has been forgotten. Only the installation of the User hard disk drive password will cause a hard disk drive to be locked upon a system power cycle.

Table 4 shows the effects of setting the hard disk drive passwords.

Table 4. Master Key and User Hard Disk Drive Password Functions

<table>
<thead>
<tr>
<th>Password Set</th>
<th>Password During Boot</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neither</td>
<td>None</td>
</tr>
<tr>
<td>Master only</td>
<td>None</td>
</tr>
<tr>
<td>User only</td>
<td>User only</td>
</tr>
<tr>
<td>Master and User</td>
<td>Master or User</td>
</tr>
</tbody>
</table>

During every POST, if a User hard disk drive password is set, POST execution will pause with the following prompt to force the user to enter the Master Key or User hard disk drive password:

Enter Hard Disk Drive Password:

Upon successful entry of the Master Key or User hard disk drive password, the system will continue with the normal POST.
If the hard disk drive password is not correctly entered, the system will go back to the above prompt. The user will have three attempts to correctly enter the hard disk drive password. After the third unsuccessful hard disk drive password attempt, the system will halt with the message:

Hard Disk Drive Password Entry Error

A manual power cycle will be required to resume system operation.

NOTE

The Hard Disk Drive Password Security feature is not supported in PCH RAID mode. Secured hard disk drives attached to the system when the system is in PCH RAID mode will not be accessible due to the disabling of BIOS Hard Disk Drive Password support.
Platform Management and Protection

Intel Desktop Board DQ67SW integrates several functions designed to manage the system and lower the total cost of ownership (TCO) of the system. These system management functions are designed to report errors, diagnose the system, and recover from system lockups without the aid of an external microcontroller. The board also includes several fan speed control and power management features.

Intel® vPro™ Technology

Intel vPro Technology is a set of processor and platform capabilities designed to enable greater proactive security, enhanced maintenance, and improved remote management both inside and outside the corporate firewall. These include:

- Intel Active Management Technology (Intel AMT)
- Intel Virtualization Technology (Intel VT)
- Intel Trusted Execution Technology (Intel TXT)
- Intel Virtualization Technology for Directed I/O (Intel VT-d)
- Intel Fast Call for Help (Intel FCFH)
- Trusted Platform Module (TPM)

Intel® Active Management Technology

Intel AMT offers IT organizations tamper-resistant and persistent management capabilities. Specifically, Intel AMT is a hardware-based solution that uses out of band communication to manage access to client systems in addition to offering encrypted and persistent asset management and remote diagnostics and/or recovery capabilities for networked platforms. With Intel AMT, IT organizations can easily get accurate platform information, and can perform remote updating, diagnostics, debugging, and repair of a system, regardless of the state of the operating system or the power state of the system.

The Intel AMT subsystem consists of:

- Intel Management Engine (Intel ME) microcontroller embedded in the Intel Q67 PCH
- Intel 82579LM Gigabit (10/100/1000 Mb/s) Ethernet LAN controller
- BIOS/SPI Flash (64 Mb)
- Intel® MEBX reset header

NOTE

Software with Intel AMT capability is required to take advantage of Intel AMT platform management capabilities.
The key features of Intel AMT include:

- Secure Out of Band (OOB) system management that allows remote management of PCs regardless of system power or operating system state.
- Remote troubleshooting and recovery that can significantly reduce desk-side visits and potentially increasing efficiency of IT technical staff.
- Proactive alerting that decreases downtime and minimizes time to repair.
- Third party non-volatile storage that prevents users from removing critical inventory, remote control, or virus protection agents.
- Remote hardware and software asset tracking that eliminates time-consuming manual inventory tracking, which also reduces asset accounting costs.
- System Defense 2
- Remote Configuration (RCFG)
- KVM (Keyboard-Video-Mouse) Remote Control. KVM Remote Control requires the use of an Intel processor with integrated graphics. The maximum resolution supported by KVM Remote Control is 1920 x 1200.
- PC Alarm Clock

**Intel AMT Software and Drivers**

Intel AMT software and drivers are available from Intel’s World Wide Web site. The package usually consists of the following components:

- Intel® Management Engine Interface (Intel® MEI)
- Serial Over LAN (SOL) driver
- Local Manageability Service (LMS)
- User Notification Service (UNS)
- Intel® ME WMI provider
- Intel® Active Management Technology NAC Posture Plug-in
- Intel Control Center
- Intel® Management and Security Status Application
Intel® MEBX Reset Header

This header (see Figure 3) allows you to reset the Intel AMT configuration to the factory defaults. Momentarily shorting pins 1 and 2 with a jumper (not supplied) will accomplish the following:

- Return all Intel ME parameters to their default values.
- Delete any user entered information, including PID/PPS and user entered Hash Certificates. USB key and remote configuration data will be removed if the parameters are not default parameters.
- Reset the Intel MEBX password to the default value (admin).

Figure 3. Location of the Intel MEBX Reset Header
**Intel® Virtualization Technology**

Intel VT is a processor technology that enables a platform to run multiple operating systems and applications as independent machines, allowing one computer system to function as multiple "virtual" systems. It also provides the “assisted hardware virtualization” required by some operating systems for backward compatibility, such as Windows XP Mode for Microsoft Windows 7.

**NOTE**

*Intel VT requires an Intel processor that supports Intel VT.*

**Intel® Trusted Execution Technology**

Intel TXT helps protect the platform against software-based attacks and preserves the confidentiality and integrity of the data created and stored on the system. It accomplishes this by using a measured launch and leveraging Intel VT to produce a protected environment for the execution of sensitive applications.

**NOTE**

*Intel TXT requires an Intel processor that supports Intel TXT.*

**Intel® Fast Call for Help**

Intel Fast Call for Help supplies remote maintenance connectivity for the Enterprise user inside or outside the corporate firewall. Coupled with your enterprise's Management Presence Server, it provides both reactive and proactive maintenance. Inside the firewall, this feature adapts Client Initiated Local Access (CILA); outside the firewall it uses Client Initiated Remote Access (CIRA).

Many of the features of Intel AMT are available with Intel Fast Call for Help. These include Serial-over-LAN, IDE Redirection, KVM Remote Control, and PC Alarm Clock.

**Trusted Platform Module (TPM)**

The Nuvoton* WPCT210 TPM 1.2, revision 103 component on Intel Desktop Board DQ67SW is designed to enhance platform security above-and-beyond the capabilities of today's software by providing a protected space for key operations and other security critical tasks. Using both hardware and software, the TPM protects encryption and signature keys at their most vulnerable stages—operations when the keys are being used unencrypted in plain-text form. The TPM is specifically designed to shield unencrypted keys and platform authentication information from software-based attacks.

For information about enabling and activating the TPM, refer to the *Trusted Platform Module (TPM) Quick Reference Guide* included with the board.
Fan Speed Control and Hardware Monitoring

The features of the hardware monitoring and fan speed control include:

- Thermal sensors in the processor and the Intel PCH, as well as near the CPU voltage regulators and system memory
- Monitoring of system voltages to detect levels above or below acceptable values
- Thermally monitored closed-loop fan control for all three fans that can adjust fan speed as needed
- Support for chassis security feature that detects if the chassis cover has been removed. The security feature uses a mechanical switch on the chassis that can be connected to the chassis intrusion header on the Desktop Board.

Power Management

Power management is implemented at several levels, including software support through the Advanced Configuration and Power Interface (ACPI) and the following hardware support:

- Power connectors
- Fan headers
- LAN wake capabilities
- Instantly Available PC technology (Suspend to RAM)
- +5 V standby power indicator LED
- Wake from USB
- PCI Power Management Event signal (PME#) wakeup support
- PCI Express WAKE# signal support
- Wake from serial port

Software Support

ACPI

ACPI gives the operating system direct control over the power management and Plug and Play functions of a computer. The use of ACPI with the Desktop Board requires an operating system that provides full ACPI support.

Hardware Support

Power Connectors

ATX12V-compliant power supplies can turn off the computer power through system control. When an ACPI-enabled computer receives the correct command, the power supply removes all non-standby voltages.

When resuming from an AC power failure, the computer returns to the power state it was in before power was interrupted (either on or off). The computer's response can be set by using the Last Power State feature in the BIOS Setup program’s Boot menu.

The Desktop Board has two power connectors. See Figure 24 on page 57 for the location of the power connectors.
Fan Headers

The function/operation of the fans is as follows:

- The fans are on when the board is in the ACPI S0 state.
- The fans are off when the computer is in the ACPI S3, S4, or S5 state.
- Each fan header is wired to a tachometer input.
- All fan headers support closed-loop fan control that can adjust the fan speed or switch the fan on or off as needed.
- All fan headers have a +12 V DC connection.
- All fan headers are controlled by Pulse Width Modulation.
- The front and rear chassis fans support Linear Fan Control on 3-wire fans.

The Desktop Board has a 4-pin processor fan header and two 4-pin chassis fan headers that are compatible with 4-wire and 3-wire chassis fans.

LAN Wake Capabilities

⚠️ CAUTION

For LAN wake capabilities, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply.

LAN wakeup capabilities enable remote wake-up of the computer through a network. The LAN subsystem monitors network traffic and upon detecting a Magic Packet* frame, it asserts a wake-up signal that powers up the computer.

Instantly Available PC Technology

⚠️ CAUTION

For Instantly Available PC technology, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply and/or effect ACPI S3 sleep state functionality.

Instantly Available PC technology enables the board to enter the ACPI S3 (Suspend-to-RAM) sleep state. Instantly Available PC technology enables the board to enter the ACPI S3 (Suspend-to-RAM) sleep-state. While in the S3 sleep-state, the computer will appear to be off (the power supply is off and the front panel power LED will behave as configured by the BIOS “S3 State Indicator” option). When signaled by a wake-up device or event, the system quickly returns to its last known wake state. When signaled by a wake-up device or event, the computer quickly returns to its last known awake state.

The Desktop Board supports the PCI Bus Power Management Interface Specification. Add-in cards that support this specification can participate in power management and can be used to wake the computer.

The use of Instantly Available PC technology requires operating system support and PCI 2.2 compliant add-in cards, PCI Express add-in cards, and drivers.
+5 V Standby Power Indicator LED

**CAUTION**

*If the AC power has been switched off and the standby power indicator is still lit, disconnect the power cord before installing or removing any devices connected to the board. Failure to do so could damage the board and any attached devices.*

The Desktop Board’s standby power indicator LED, shown in Figure 4, is lit when there is standby power still present on the board even when the computer appears to be off. For example, when this green LED is lit, standby power is still present at the memory module sockets and the PCI bus connectors.

---

![Figure 4. Location of the Standby Power Indicator](image_url)

Wake from USB

**NOTE**

*Wake from USB requires the use of a USB peripheral that supports Wake from USB and an operating system that supports Wake from USB.*

USB bus activity wakes the computer from an ACPI S3 state.

**PCI PME# Signal Wake-up Support**

When the PME# signal on the Conventional PCI bus is asserted, the computer wakes from an ACPI S3, S4, or S5 state.
PCI Express WAKE# Signal Wake-up Support

When the WAKE# signal on a PCI Express bus add-in card is asserted, the computer wakes from an ACPI S3, S4, or S5 state.

Wake from Serial Port

Serial port activity wakes the computer from an ACPI S3 state.

Onboard Speaker

A speaker is mounted on the Desktop Board. The speaker provides audible error code (beep code) information during the Power-On Self-Test (POST). Refer to Appendix A for a description of the beep codes that may be generated during the POST.

Real-Time Clock Subsystem

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery.

The clock is accurate to ± 13 minutes/year at 25 ºC with standby power applied by the power supply.

NOTE

If the battery and AC power fail, date and time values will be reset and the user will be notified during the POST.

When the battery voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Go to page 60 for instructions on how to replace the battery.
2 Installing and Replacing Desktop Board Components

This chapter tells you how to:

- Install the I/O shield
- Install and remove the Desktop Board
- Install and remove a processor
- Install and remove memory
- Install and remove a PCI Express x16 card
- Connect Serial ATA cables
- Connect to the internal headers
- Connect to the audio system
- Connect chassis fan and power supply cables
- Set the BIOS configuration jumper
- Clear passwords
- Replace the battery

Before You Begin

⚠️ CAUTIONS

The procedures in this chapter assume familiarity with the general terminology associated with personal computers and with the safety practices and regulatory compliance required for using and modifying electronic equipment.

Disconnect the computer from its power source and from any telecommunications links, networks, or modems before performing any of the procedures described in this chapter. Failure to disconnect power, telecommunications links, networks, or modems before you open the computer or perform any procedures can result in personal injury or equipment damage. Some circuitry on the board can continue to operate even though the front panel power button is off.

Follow these guidelines before you begin:

- Always follow the steps in each procedure in the correct order.
- Set up a log to record information about your computer, such as model, serial numbers, installed options, and configuration information.
- Electrostatic discharge (ESD) can damage components. Perform the procedures described in this chapter only at an ESD workstation using an antistatic wrist strap and a conductive foam pad. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.
Installations Precautions

When you install and test the Intel Desktop Board, observe all warnings and cautions in the installation instructions.

To avoid injury, be careful of:

- Sharp pins on connectors
- Sharp pins on printed circuit assemblies
- Rough edges and sharp corners on the chassis
- Hot components (such as processors, voltage regulators, and heat sinks)
- Damage to wires that could cause a short circuit

Observe all warnings and cautions that instruct you to refer computer servicing to qualified technical personnel.

Prevent Power Supply Overload

Do not overload the power supply output. To avoid overloading the power supply, make sure that the calculated total current loads of all the modules within the computer is less than the output current rating of each of the power supplies output circuits plus enough headroom for desktop board power consumption.

Observe Safety and Regulatory Requirements

Read and follow the instructions in this section and the instructions supplied with the chassis and associated modules. If you do not follow these instructions and the instructions provided by the chassis and module suppliers, you increase your safety risk and the possibility of noncompliance with regional laws and regulations. If the instructions for the chassis are inconsistent with these instructions or the instructions for associated modules, contact the supplier to find out how you can ensure that your computer meets safety and regulatory requirements.

For information about the Desktop Board’s regulatory compliance, refer to Appendix B.
Installing the I/O Shield

The Desktop Board comes with an I/O shield. When installed in the chassis, the shield blocks radio frequency transmissions, protects internal components from dust and foreign objects, and promotes correct airflow within the chassis.

Install the I/O shield before installing the Desktop Board in the chassis. Place the shield inside the chassis as shown in Figure 5. Press the shield into place so that it fits tightly and securely. If the shield does not fit, obtain a properly sized shield from the chassis supplier.

Figure 5. Installing the I/O Shield
Installing and Removing the Desktop Board

⚠️ **CAUTION**

*Only qualified technical personnel should perform this procedure. Disconnect the computer from its power source before performing the procedures described here. Failure to disconnect the power before you open the computer can result in personal injury or equipment damage.*

Refer to your chassis manual for instructions on installing and removing the Desktop Board.

Figure 6 shows the location of the mounting screw holes for Intel Desktop Board DQ67SW.

---

![Figure 6. Intel Desktop Board DQ67SW Mounting Screw Hole Locations](OM22812)
Installing and Removing a Processor

Instructions on how to install the processor on the Desktop Board are given below.

Installing a Processor

⚠️ **CAUTION**

*Before installing or removing a processor, make sure the AC power has been removed by unplugging the power cord from the computer; the standby power LED should not be lit (see Figure 4 on page 31). Failure to do so could damage the processor and the board.*

To install a processor, follow these instructions:
1. Observe the precautions in "Before You Begin" on page 33.
2. Unlatch the processor socket lever by pushing it down and away from the socket (Figure 7, A, B).

---

*Figure 7. Unlatch the Socket Lever*
3. Rotate the socket lever to lift the load plate away from the socket (Figure 8, A). Make sure that the load plate is in the fully open position (Figure 8, B) while being careful not to damage adjacent components. Do not touch the socket contacts.

---

**Figure 8. Lift the Load Plate**
4. Remove the processor from its protective cover. Hold the processor only at the edges, being careful not to touch the bottom of the processor (see Figure 9).

**NOTE**

*Do not discard the processor cover. Always replace the processor cover if you remove the processor from the socket.*

---

**Figure 9. Remove the Processor from the Protective Cover**

5. Hold the processor with your thumb and index finger oriented as shown in Figure 10 to align your fingers with the socket finger cutouts. Make sure that the processor Pin 1 indicator (gold triangle) is aligned with the Pin 1 chamfer on the socket (Figure 10, B) and that the notches on the processor align with the posts on the socket (Figure 10, C). Lower the processor straight down without tilting or sliding it in the socket (Figure 10, A).

---

**Figure 10. Install the Processor**
6. Carefully lower the socket lever (Figure 11, A) while making sure that the front edge of the load plate slides under the shoulder screw cap as the lever is lowered. Latch the socket lever under the load plate tab (Figure 11, C, D). The socket cover (Figure 11, B) will pop off as shown.

7. Pick up the socket cover and remove it from the desktop board.

**NOTE**

*Do not discard the socket cover; save it for possible future use. Always replace the socket cover if you remove the processor from the socket.*
Installing a Processor Fan Heat Sink

Intel Desktop Board DQ67SW has mounting holes for a processor fan heat sink. For instructions on how to attach the processor fan heat sink to the Desktop Board, refer to the boxed processor manual or boxed thermal solution manual.

Connecting the Processor Fan Heat Sink Cable

Connect the processor fan heat sink power cable to the 4-pin processor fan header (see Figure 12). A fan with a 4-pin connector as shown in Figure 12 is recommended.

Removing the Processor

For instructions on how to remove the processor fan heat sink and processor, refer to the processor installation manual.
Installing and Removing System Memory

Guidelines for Dual Channel Memory Configuration

Desktop board DQ67SW has four 240-pin DDR3 DIMM sockets arranged in two channels (A and B).

Two or Four DIMMs

Install a matched pair of DIMMs equal in speed and size (see Figure 13) in the blue socket of channel A (DIMM 1) and channel B (DIMM 2).

If additional memory is to be used, install another matched pair of DIMMs (see Figure 14) in the black socket of channel A (DIMM 3) and channel B (DIMM 4).

Figure 13. Example Dual Channel Memory Configuration with Two DIMMs

Figure 14. Example Dual Channel Memory Configuration with Four DIMMs
Three DIMMs

If you want to use three DIMMs in a dual-channel configuration, install a matched pair of DIMMs equal in speed and size in DIMM 1 and DIMM 3 of channel A. Then install another DIMM equal to the speed and total size of the DIMMs installed in channel A in either DIMM 2 or DIMM 4 of channel B (Figure 15).

---

**Figure 15. Example Dual Channel Memory Configuration with Three DIMMs**
Installing DIMMs

To make sure you have the correct DIMM, place it on the illustration of the DDR3 DIMM in Figure 16. All the notches should match with the DDR3 DIMM.

---

Figure 16. Use DDR3 DIMMs
To install a DIMM, follow these steps:
1. Observe the precautions in "Before You Begin" on page 33.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the computer’s cover and locate the DIMM sockets (see Figure 17).
4. If a full length PCI Express graphics card is installed in the PCI Express x16 connector, remove the card to gain full access to the DIMM sockets.

5. Make sure the clips at either end of the DIMM socket(s) are pushed outward to the open position.
6. Holding the DIMM by the edges, remove it from its anti-static package.
7. Position the DIMM above the socket. Align the small notch at the bottom edge of the DIMM with the keys in the socket (see inset in Figure 17).
8. Insert the bottom edge of the DIMM into the socket.
9. When the DIMM is inserted, push down on the top edge of the DIMM until the retaining clips snap into place. Make sure the clips are firmly in place.
10. Reinstall the PCI Express graphics card if one was removed in Step 4.
11. Replace the computer’s cover and reconnect the AC power cord.
Removing DIMMs

To remove a DIMM, follow these steps:
1. Observe the precautions in "Before You Begin" on page 33.
2. Turn off all peripheral devices connected to the computer. Turn off the computer.
3. Remove the AC power cord from the computer.
4. Remove the computer’s cover.
5. If a full length PCI Express graphics card is installed in the PCI Express x16 connector, remove the card to gain access to the DIMMs.
6. Gently spread the retaining clips at each end of the DIMM socket. The DIMM pops out of the socket.
7. Hold the DIMM by the edges, lift it away from the socket, and store it in an anti-static package.
8. Reinstall the PCI Express graphics card if one was removed in Step 5 and reconnect any other parts you removed or disconnected to reach the DIMMs.
9. Replace the computer’s cover and reconnect the AC power cord.

Installing and Removing PCI Express x16 Graphics Cards

Installing a PCI Express x16 Graphics Card

⚠️ CAUTION

Before installing a PCI Express x16 graphics card, make sure that the tabs on the DIMM sockets are in the upright position (closed); otherwise, they may be damaged by the PCI Express card during installation.

⚠️ CAUTION

When installing a PCI Express card, ensure that the card is fully seated in the PCI Express connector before you power on the system. If the card is not fully seated in the connector, an electrical short may result across the connector pins. Depending on the over-current protection of the power supply, certain Desktop Board components and/or traces may be damaged.
Follow these instructions to install a PCI Express x16 graphics card:
1. Observe the precautions in "Before You Begin" on page 33.
2. Place the card in the PCI Express x16 connector (Figure 18, A) and press down on the card until it is completely seated in the connector and the card retention notch on the card snaps into place around the retention mechanism pin on the connector.
3. Secure the card’s metal bracket to the chassis back panel with a screw (Figure 18, B).
4. Connect a monitor to the graphics card according to the manufacturer’s instructions.

Figure 18. Installing a PCI Express x16 Graphics Card
Removing a PCI Express x16 Graphics Card

Follow these instructions to remove a PCI Express x16 graphics card from a connector:

1. Observe the precautions in "Before You Begin" on page 33.
2. Disconnect the monitor cable from the graphics card back panel connector.
3. Remove the screw (Figure 19, A) that secures the card’s metal bracket to the chassis back panel.
4. Push the card ejector lever down using the tip of a pencil or similar tool (Figure 19, B) in the notch. This will release the card from the connector (C).
5. Pull the card straight up to remove it.
Connecting Serial ATA (SATA) Cables

SATA cables support the Serial ATA protocol. Each cable can be used to connect one internal SATA drive to the Desktop Board. For correct cable function:

1. Observe the precautions in "Before You Begin" on page 33.
2. Attach one end of the SATA cable to one of the SATA connectors on the board (Figure 20, A) and attach the other end of the cable to the SATA drive (Figure 20, B).

Figure 20. Connecting a Serial ATA Cable
Connecting to the Internal Headers

Before connecting cables to any of the internal headers, observe the precautions in “Before You Begin” on page 33. Figure 21 shows the location of the internal headers and connectors on Intel Desktop Board DQ67SW.
S/PDIF Header

Figure 21, A shows the location of the S/PDIF output header. Table 5 shows the pin assignments and signal names for the S/PDIF output header.

**Figure 22. Back Panel Audio Connectors**

**NOTE**

*The back panel line out connector is designed to power either headphones or amplified speakers only. Poor audio quality may occur if passive (non-amplified) speakers are connected to this output.*
Connecting Chassis Fan and Power Supply Cables

Connecting Chassis Fan Cables

Connect chassis fan cables to the chassis fan headers on the Desktop Board. Figure 23 shows the location of the chassis fan headers.

Figure 23. Location of the Chassis Fan Headers
Connecting Power Supply Cables

**CAUTION**

*Failure to use an appropriate power supply and/or not connecting the 12 V power connector (Figure 24, A) to the Desktop Board may result in damage to the board or the system may not function properly.*

Figure 24 shows the location of the power connectors. The 2 x 12 pin main power connector (Figure 24, B) is backwards compatible with ATX12V power supplies with 2 x 10 connectors.

**NOTE**

*If your power supply has a 2 x 10 main power connector, it is recommended that you do not install a PCI Express x16 graphics card unless it has a direct connection to the power supply.*

---

**Figure 24. Connecting Power Supply Cables**

1. Observe the precautions in "Before You Begin" on page 33.
2. Connect the 12 V processor core voltage power supply cable to the 2 x 2 pin connector (Figure 24, A).
3. Connect the main power supply cable to the 2 x 12 pin connector (Figure 24, B).
Setting the BIOS Configuration Jumper

**NOTE**

Always turn off the power to the computer before moving the jumper. Moving the jumper with the power on may result in unreliable computer operation.

Figure 25 shows the location of the Desktop Board’s BIOS configuration jumper block.

---

**Figure 25. Location of the BIOS Configuration Jumper Block**
The three-pin BIOS jumper block enables board configuration to be done in the BIOS Setup program. Table 16 shows the jumper settings for the BIOS Setup program modes.

### Table 16. Jumper Settings for the BIOS Setup Program Modes

<table>
<thead>
<tr>
<th>Jumper Setting</th>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal (default) (1-2)</td>
<td>The BIOS uses the current configuration and passwords for booting.</td>
<td></td>
</tr>
<tr>
<td>Configure (2-3)</td>
<td>After the Power-On Self-Test (POST) runs, the BIOS displays the Maintenance Menu. Use this menu to clear passwords.</td>
<td></td>
</tr>
<tr>
<td>Recovery (None)</td>
<td>The BIOS recovers data in the event of a failed BIOS update.</td>
<td></td>
</tr>
</tbody>
</table>

### Clearing Passwords in the BIOS Setup Program

This procedure assumes that the board is installed in the computer and the configuration jumper block is set to normal mode.

1. Observe the precautions in "Before You Begin" on page 33.
2. Turn off all peripheral devices connected to the computer. Turn off the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Find the configuration jumper block (see Figure 25).
5. Place the jumper on pins 2-3 as shown below.
6. Replace the cover, plug in the computer, turn on the computer, and allow it to boot.
7. The computer starts the Setup program. Setup displays the Maintenance menu.
8. Use the arrow keys to select Clear Passwords. Press <Enter> and Setup displays a pop-up screen requesting that you confirm clearing the password. Select Yes and press <Enter>. Setup displays the maintenance menu again.
9. Press <F10> to save the current values and exit Setup.
10. Turn off the computer. Disconnect the computer’s power cord from the AC power source.
11. Remove the computer cover.
12. To restore normal operation, place the jumper on pins 1-2 as shown below.

13. Replace the cover, plug in the computer, and turn on the computer.

### Replacing the Battery

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery. The clock is accurate to ±13 minutes/year at 25 ºC with 3.3 VSB applied.

When the voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Figure 26 on page 65 shows the location of the battery.

⚠️ **CAUTION**

*Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.*

⚠️ **PRÉCAUTION**

*Risque d’explosion si la pile usagée est remplacée par une pile de type incorrect. Les piles usagées doivent être recyclées dans la mesure du possible. La mise au rebut des piles usagées doit respecter les réglementations locales en vigueur en matière de protection de l’environnement.*
AŚCJAROŻNAŚĆ

Иснуе рызыка выбуху, калі заменены акчынлата праправільнага тыпу. Акчынлата павінны, па магчымацы, перепраоўвацца. Пазбэўляцца ад старых акчынлатаў патрабна згодна з мясцовым заканадаўствам па эканогіі.

VIGYÁZAT

Ha a telepet nem a megfelelő típusú telepre cseréli, az felrobbanhat. A telepeket lehetőség szerint újra kell hasznosítani. A használt telepeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejtézni.

注意

異なる種類の電池を使用すると、爆発の危険があります。リサイクルが可能な地域であれば、電池をリサイクルしてください。使用後の電池を破棄する際には、地域の環境規制に従ってください。

AWAS

OSTRZEŻENIE

Istnieje niebezpieczeństw wybuchu w przypadku zastosowania niewłaściwego typu baterii. Zużyte baterie należy w miarę możliwości utylizować zgodnie z odpowiednimi przepisami ochrony środowiska.

PRECAUȚIE

Risc de explozie, dacă bateria este înlocuită cu un tip de baterie necorespunzător. Bateriile trebuie reciclate, dacă este posibil. Depozitarea bateriilor uzate trebuie să respecte reglementările locale privind protecția mediului.
ВНИМАНИЕ
При использовании батареи несоответствующего типа существует риск ее взрыва. Батареи должны быть утилизированы по возможности. Утилизация батареи должна проводиться по правилам, соответствующим местным требованиям.

UPOZORNENIE
Ak batériu vymenite za nesprávny typ, hrozí nebezpečenstvo jej výbuchu. Batérie by sa mali podla možnosti vždy recyklovať. Likvidácia použitých batérií sa musí vykonávať v súlade s miestnymi predpismi na ochranu životného prostredia.

POZOR
Zamenjava baterije z baterijo drugačnega tipa lahko povzroči eksplozijo. Če je mogoče, baterije reciklirajte. Rabljene baterije zavržite v skladu z lokalnimi okoljevarstvenimi predpisi.

Үйдөө
рекомендуется использование типов элементов питания. Если необходимо, элементы питания должны быть утилизированы. Утилизация элементов питания должна проводиться в соответствии с местными правилами по защите окружающей среды.

UYARI

OCTOPOGA
Використовуйте батареї правильного типу, інакше існуватиме ризик вибуху. Якщо можливо, використані батареї слід утилізувати. Утилізація використаних батарей має бути виконана згідно місцевих норм, що регулюють охорону довкілля.

UPOZORNĚNÍ

ETTEVAATUST
Kui patarei asendatakse uue ebasobivat tüüpi patareiga, võib tekkida plahvatusoht. Tühjad patareid tuleb võimaluse korral viia vastavasse kogumispunkt. Tühjade patareide äraviskamisel tuleb järgida kohalikke keskkonnakaitse alaseid reegleid.

FIGYELMEZTETÉS
Ha az elemet nem a megfelelő típusúra cseréli, felrobbanhat. Az elemeket lehetőség szerint útra kell hasznosítani. A használt elemeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejtezni.
UZMANĪBU

DĒMESIO

ATTENZJONI
Riskju ta’ splužjoni jekk il-batterja tinbidel b’tip ta’ batterja mhux korrett. Il-batterji ghandhom jigu riciklati fejn hu possibbli. Ir-rimi ta’ batterji užati ghandu jsir skond ir-regolamenti ambjentali lokali.

OSTRZEŻENIE
Ryzyko wybuchu w przypadku wymiany na baterie niewłaściwego typu. W miarę możliwości baterie należy poddać recyklingowi. Zużytych baterii należy pozywać się zgodnie z lokalnie obowiązującymi przepisami w zakresie ochrony środowiska.
To replace the battery, follow these steps:

1. Observe the precautions in "Before You Begin" (see page 33).
2. Turn off all peripheral devices connected to the computer and turn off the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Locate the battery on the board (see Figure 26).
5. Disengage the tab on the battery holder as shown in Figure 26 and remove the battery. Note the orientation of the “+” and “−” on the battery.
6. Install the new battery in the connector, orienting the “+” and “−” correctly.
7. Replace the computer cover and reconnect the computer to the AC power source.

Figure 26. Removing the Battery
3 Updating the BIOS

The BIOS Setup program can be used to view and change the BIOS settings for the computer. You can access the BIOS Setup program by pressing the <F2> key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

This chapter tells you how to update the BIOS by either using the Intel Express BIOS Update utility or the Intel® Flash Memory Update Utility, and how to recover the BIOS if an update fails.

Updating the BIOS with the Intel® Express BIOS Update Utility

With the Intel Express BIOS Update utility you can update the system BIOS while in the Windows environment. The BIOS file is included in an automated update utility that combines the functionality of the Intel Flash Memory Update Utility and the ease of use of Windows-based installation wizards.

To update the BIOS with the Intel Express BIOS Update utility:
2. Navigate to the DQ67SW page. Click on the “BIOS Update” link and then select the Express BIOS Update file.
3. Download the file to your hard drive. (You can also save this file to a removable USB device. This is useful if you are updating the BIOS for multiple identical systems.)
4. Close all other applications. This step is required. Your system will be rebooted at the last Express BIOS Update window.
5. Double-click the executable file from the location on your hard drive where it was saved. This runs the update program.
6. Follow the instructions provided in the dialog boxes to complete the BIOS update.
Updating the BIOS Using the F7 Function Key

To use this BIOS update method:
1. Download and save the Recovery BIOS (.BIO) file to a temporary directory.
2. Copy the .BIO file to a USB thumb drive. The USB thumb drive does not need to be bootable, only formatted. FAT16, FAT32, and NTFS formats are supported.
3. Plug the thumb drive into a USB 2.0 port (black) of the target computer.
4. Shut down the target computer.
5. Enable the F7 prompt display:
   a. Power the computer on.
   b. Enter the BIOS Setup by pressing F2 during boot.
   c. Go to the Advanced > Boot Configuration menu.
   d. Enable Display F7 to Update BIOS.
   e. Press F10 to save and exit.
6. During boot, when the F7 prompt is displayed, press F7 to enter the BIOS Flash Update tool.
7. Select the USB thumb drive and press Enter.
8. Select the .BIO file and press Enter.
9. Confirm you want to update the BIOS by pressing Enter.
10. Wait 2-5 minutes for the update to complete.
11. Remove the thumb drive.
12. Restart the computer.
Updating the BIOS with the ISO Image BIOS Update File or the Intel® Flash Memory Update Utility

You can use the information in this section to update the BIOS using either the Intel Flash Memory Update Utility or the ISO Image BIOS update file.

Obtaining the BIOS Update File

You can update to a new version of the BIOS by using the ISO Image BIOS update file (recommended), or Intel Flash Memory BIOS update file.

The ISO Image BIOS update file is a standardized image of a bootable CD-ROM that can be used to create a bootable CD that will update the BIOS.

The Intel Flash Memory BIOS update file is a compressed file that contains the files you need to update the BIOS. The BIOS update file contains:

- New BIOS file (including the Intel® Management Engine (Intel® ME) Firmware Image)
- Intel® Integrator Toolkit Configuration File (optional)
- Intel Flash Memory Update Utility

You can obtain either of these files through your computer supplier or by navigating to the Intel Desktop Board DQ67SW page on the Intel World Wide Web site Download Center at [http://downloadcenter.intel.com](http://downloadcenter.intel.com).

On the DQ67SW page, click on the “BIOS Update” link and then select the the Iflash BIOS Update file.

Updating the BIOS with the Intel Flash Memory Update Utility

With the Intel Flash Memory Update Utility you can update the system BIOS from a bootable CD-ROM, bootable USB flash drive, or other bootable USB media. The utility available on the Intel World Wide Web site provides a simple method for creating a bootable CD-ROM that will automatically update your BIOS. The BIOS update files can also be extracted locally to your hard drive and copied to a bootable USB flash drive or other bootable USB media.

The Intel Flash Memory Update Utility allows you to:

- Update the BIOS and Intel Management Engine in flash memory
- Update the language section of the BIOS

NOTE
Review the instructions distributed with the update utility before attempting a BIOS update.
CAUTION

Do not interrupt the process or the system may not function properly.

1. Uncompress the BIOS update file and copy the .BIO file, IFLASH.EXE, and .ITK file (optional) to a bootable USB flash drive or other bootable USB media.
2. Configure the BIOS or use the F10 option during POST to boot to the USB device.
3. Manually run the IFLASH.EXE file from the USB device and manually update the BIOS.

Updating the BIOS with the ISO Image BIOS Update File

The ISO Image BIOS update allows for the update of an Intel® Desktop Board BIOS to the latest production release regardless of the operating system installed on the computer's hard drive and without the need to remove the BIOS configuration jumper. It requires a blank CD-R, a read/writeable CD drive, and software capable of uncompressing and writing the ISO image file to CD.

The image uses ISOLINUX* bootloader and automatically launches a script to upgrade the BIOS via the Intel Flash Memory Utility.

CAUTION

Do not interrupt the process or the system may not function properly.

Follow these instructions to upgrade the BIOS using the ISO Image BIOS file:
1. Download the ISO Image BIOS file.
2. Using software capable of uncompressing and writing an ISO image file to CD, burn the data to a blank CD.

NOTE

Copying the ISO Image BIOS file to CD will not work. The completed CD should contain multiple files and a directory.

3. Insert the CD that was created in the CD-ROM drive of the computer to be upgraded and boot the system.
4. When the "Press ENTER to continue booting from CD-ROM" prompt appears, press the Enter key. The system will boot from the hard drive if no key is pressed within 15 seconds.
5. At the "Welcome to the Intel Desktop Board BIOS Upgrade CD-ROM" page, press any key to confirm the BIOS upgrade operation.
6. Wait for the BIOS upgrade process to complete.

CAUTION

DO NOT POWER DOWN YOUR COMPUTER before the update is complete. The update may take up to 5 minutes.
Recovering the BIOS

It is unlikely that anything will interrupt the BIOS update; however, if an interruption occurs, the BIOS could be damaged. Due to BIOS size and recovery requirements, a CD-R with the .BIO file in the root directory will be required.

On the DQ67SW page, click on the “BIOS Update” link and then select the Recovery BIOS Update file.

NOTE

For more information about updating the Intel Desktop Board BIOS or recovering from a BIOS update failure, go to http://support.intel.com/support/motherboards/desktop/sb/CS-022312.htm.
Intel Desktop Board DQ67SW reports POST errors in two ways:
- By sounding a beep code and blinking the front panel power LED
- By displaying an error message on the monitor

**BIOS Error Codes**

Whenever a recoverable error occurs during POST, the BIOS causes the board’s speaker to beep and the front panel power LED to blink an error message indicating the problem (see Table 17).

**Table 17. BIOS Beep Codes**

<table>
<thead>
<tr>
<th>Type</th>
<th>Pattern</th>
<th>Frequency/Comments</th>
</tr>

B Regulatory Compliance

This appendix contains the following regulatory compliance information for Intel Desktop Board DQ67SW:

- Safety standards
- European Union Declaration of Conformity statement
- Product Ecology statements
- Electromagnetic Compatibility (EMC) regulations
- Product certifications

Safety Standards

Intel Desktop Board DQ67SW complies with the safety standards stated in Table 20 when correctly installed in a compatible host system.

Table 20. Safety Standards

</tr>
</tbody>
</table>

Battery Caution

There is insufficient space on this Desktop Board to provide instructions for replacing and disposing of the Lithium ion coin cell battery. For system safety certification, the statement below or an equivalent statement is required to be permanently and legibly marked on the chassis near the battery.

A suitable caution label is included with Intel Desktop Board DQ67SW.

⚠️ CAUTION

Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

For information about replacing the battery, go to page 60.
European Union Declaration of Conformity Statement

We, Intel Corporation, declare under our sole responsibility that the product Intel® Desktop Board DQ67SW is in conformity with all applicable essential requirements necessary for CE marking, following the provisions of the European Council Directives 2004/108/EC (EMC Directive), 2006/95/EC (Low Voltage Directive), and 2002/95/EC (ROHS Directive).

The product is properly CE marked demonstrating this conformity and is for distribution within all member states of the EU with no restrictions.

This product follows the provisions of the European Directives 2004/108/EC, 2006/95/EC and 2002/95/EC.

Čeština Tento výrobek odpovídá požadavkům evropských směrnic 2004/108/EC, 2006/95/EC a 2002/95/EC.

Dansk Dette produkt er i overensstemmelse med det europæiske direktiv 2004/108/EC, 2006/95/EC & 2002/95/EC.

Dutch Dit product is in navolging van de bepalingen van Europees Directief 2004/108/EC, 2006/95/EC & 2002/95/EC.

Ελληνικά Το παρόν προϊόν ακολουθεί τις διατάξεις των Ευρωπαϊκών Οδηγιών 2004/108/EC, 2006/95/EC και 2002/95/EC.

Italiano Questo prodotto è conforme alla Direttiva Europea 2004/108/EC, 2006/95/EC & 2002/95/EC.

Malti Dan il-prodott hu konformi mal-provvedimenti tad-Direttivi Ewropej 2004/108/EC, 2006/95/EC u 2002/95/EC.

Norsk Dette produktet er i henhold til bestemmelsene i det europeiske direktivet 2004/108/EC, 2006/95/EC & 2002/95/EC.
**Product Ecology Statements**

The following information is provided to address worldwide product ecology concerns and regulations.

**Recycling Considerations**

As part of its commitment to environmental responsibility, Intel has implemented the Intel® Product Recycling Program to allow retail consumers of Intel’s branded products to return used products to selected locations for proper recycling.

Please consult [http://intel.com/intel/other/ehs/product_ecology](http://intel.com/intel/other/ehs/product_ecology) for the details of this program, including the scope of covered products, available locations, shipping instructions, terms and conditions, etc.

**中文**

作为其对环境责任之承诺的部分，英特尔已实施 Intel Product Recycling Program（英特尔产品回收计划），以允许英特尔品牌产品的零售消费者将使用过的产品退还至指定地点作恰当的重复使用处理。

Deutsch

Details zu diesem Programm, einschließlich der darin eingeschlossenen Produkte, verfügbaren Standorte, Versandanweisungen, Bedingungen usw., finden Sie auf der http://intel.com/intel/other/ehs/product_ecology

Español
Como parte de su compromiso de responsabilidad medioambiental, Intel ha implantado el programa de reciclaje de productos Intel, que permite que los consumidores al detalle de los productos Intel devuelvan los productos usados en los lugares seleccionados para su correspondiente reciclado.

Consulte la http://intel.com/intel/other/ehs/product_ecology para ver los detalles del programa, que incluye los productos que abarca, los lugares disponibles, instrucciones de envío, términos y condiciones, etc.

Français
Dans le cadre de son engagement pour la protection de l'environnement, Intel a mis en œuvre le programme Intel Product Recycling Program (Programme de recyclage des produits Intel) pour permettre aux consommateurs de produits Intel de recycler les produits usés en les retournant à des adresses spécifiées.

Visitez la page Web http://intel.com/intel/other/ehs/product_ecology pour en savoir plus sur ce programme, à savoir les produits concernés, les adresses disponibles, les instructions d'expédition, les conditions générales, etc.

日本語
インテルでは、環境保護活動の一環として、使い終えたインテル ブランド製品を指定の場所へ返送していただき、リサイクルを適切に行えるよう、インテル製品リサイクル プログラムを発足させました。

対象製品、返送先、返送方法、ご利用規約など、このプログラムの詳細情報は、http://intel.com/intel/other/ehs/product_ecology（英語）をご覧ください。

Malay
Sebagai sebahagian daripada komitmennya terhadap tanggungjawab persekitaran, Intel telah melaksanakan Program Kitar Semula Produk untuk membenarkan pengguna-pengguna rancit produk jenama Intel memulangkan produk terguna ke lokasi-lokasi terpilih untuk dikitarkan semula dengan betul.

Portuguese
Como parte deste compromisso com o respeito ao ambiente, a Intel implementou o Programa de Reciclagem de Produtos para que os consumidores finais possam enviar produtos Intel usados para locais selecionados, onde esses produtos são reciclados de maneira adequada.

Consulte o site http://intel.com/intel/other/ehs/product_ecology (em Inglês) para obter os detalhes sobre este programa, inclusive o escopo dos produtos cobertos, os locais disponíveis, as instruções de envio, os termos e condições, etc.

Russian
В качестве части своих обязательств к окружающей среде, в Intel создана программа утилизации продукции Intel (Product Recycling Program) для предоставления конечным пользователям марок продукции Intel возможности возврата используемой продукции в специализированные пункты для должной утилизации.

Пожалуйста, обратитесь на веб-сайт http://intel.com/intel/other/ehs/product_ecology за информацией об этой программе, принимаемых продуктах, местах приема, инструкциях об отправке, положениях и условиях и т.д.

Türkçe
Intel, çevre sorumluluğuna bağlılığının bir parçası olarak, perakende tüketicilerin Intel markalı kullanılmış ürünlerini belirli merkezlere iade edip uygun şekilde geri dönüştürmesini amaçlayan Intel Ürünleri Geri Dönüşüm Programı’nı uygulamaya koymuştur.

China RoHS

Intel Desktop Board DQ67SW is a China RoHS-compliant product.

The China Ministry of Information Industry (MII) stipulates that a material Self Declaration Table (SDT) must be included in a product’s user documentation. The SDT for Intel Desktop Board DQ67SW is shown in Figure 27.

### FCC Declaration of Conformity

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For questions related to the EMC performance of this product, contact:

Intel Corporation, 5200 N.E. Elam Young Parkway, Hillsboro, OR 97124
1-800-628-8686

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to
radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit other than the one to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications to the equipment not expressly approved by Intel Corporation could void the user's authority to operate the equipment.

Tested to comply with FCC standards for home or office use.

Canadian Department of Communications Compliance Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

Japan VCCI Statement

Japan Statement translation: This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.
Korea Class B Statement

Korea Class B Statement translation: This equipment is for home use, and has acquired electromagnetic conformity registration, so it can be used not only in residential areas, but also other areas.

Ensure Electromagnetic Compatibility (EMC) Compliance

Before computer integration, make sure that the power supply and other modules or peripherals, as applicable, have passed Class B EMC testing and are marked accordingly.

Pay close attention to the following when reading the installation instructions for the host chassis, power supply, and other modules:

- Product certifications or lack of certifications
- External I/O cable shielding and filtering
- Mounting, grounding, and bonding requirements
- Keying connectors when mating the wrong connectors could be hazardous

If the power supply and other modules or peripherals, as applicable, are not Class B EMC compliant before integration, then EMC testing may be required on a representative sample of the newly completed computer.
## Product Certifications

### Board-Level Certifications

Intel Desktop Board DQ67SW has the regulatory compliance marks shown in Table 22.

<table>
<thead>
<tr>

</tbody>
</table>
Chassis- and Component-Level Certifications

Ensure that the chassis and certain components; such as the power supply, peripheral drives, wiring, and cables; are components certified for the country or market where used. Agency certification marks on the product are proof of certification. Typical product certifications include:

In Europe
The CE mark indicates compliance with all applicable European requirements. If the chassis and other components are not properly CE marked, a supplier’s Declaration of Conformity statement to the European EMC directive, Low Voltage directive (as applicable), and ROHS directive, should be obtained. Additionally, other directives, such as the Radio and Telecommunications Terminal Equipment (R&TTE) directive may also apply depending on product features.

In the United States
A certification mark by a Nationally Recognized Testing Laboratory (NRTL) such as UL, CSA, or ETL signifies compliance with safety requirements. Wiring and cables must also be UL listed or recognized and suitable for the intended use. The FCC Class B logo for home or office use signifies compliance with electromagnetic interference (EMI) requirements.

In Canada
A nationally recognized certification mark such as CSA or cUL signifies compliance with safety requirements. The Industry Canada statement at the front of this product guide demonstrates compliance with Canadian EMC regulations.

ENERGY STAR*, e-Standby, and ErP Compliance

The US Department of Energy and the US Environmental Protection Agency have continually revised the ENERGY STAR requirements. Intel has worked directly with these two governmental agencies in the definition of the new requirements. This Desktop Board meets the ENERGY STAR Program for Computers: Version 5.0 Category A requirements.

For information about ENERGY STAR requirements and recommended configurations, go to [http://www.intel.com/go/energystar](http://www.intel.com/go/energystar).

The Desktop Board also meets the following international requirements:
- Republic of Korea e-Standby program
- European Union Energy using Products (ErP) Lot 6 directive
