1.0 Overview of the Release

This document provides a brief overview of the changes introduced into the Intel® Omni-Path Thermal Management Microchip (TMM) by this release. Intel® Omni-Path TMM is used for the hardware listed in #unique_3/unique_3_Connect_42_TABLE_4S63FDF593D34351A9E2A9974D0DD54D.

The information contained in this document is intended as supplemental information only; it should be used in conjunction with the documentation provided for each component.

These Release Notes list the features supported in this release, open issues, and issues that were resolved during release development.

1.1 Audience

The information provided in this document is intended for installers, software support engineers, service personnel, and system administrators.

1.2 Document Versions

The following table lists the end user document versions supported by this release.

Table 1. Supported Document Versions

<table>
<thead>
<tr>

1.3 **Software License Agreement**

This software is provided under license agreements and may contain third-party software under separate third-party licensing. Please refer to the license files provided with the software for specific details.

1.4 **If You Need Help**

Technical support for Intel® Omni-Path products is available 24 hours a day, 365 days a year. Please contact Intel Customer Support or visit [http://www.intel.com/omnipath/support](http://www.intel.com/omnipath/support) for additional detail.

1.5 **Supported Features**

- The list of supported hardware is in #unique_3/unique_3_Connect_42_TABLE_4563FDF593D34351A9E2A9974D0DD54D.
- Creates a standalone package of hfi1-tmm firmware that is external to the Intel OPA IFS package.

1.6 **Firmware Files**

This release contains the firmware files listed in the table below.

**Table 2. Firmware Files**

<table>
<thead>
<tr>
<th>Description</th>
<th>File Name</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>HFI1 SMBus Microcontroller Firmware (Thermal Monitor) CHF (temp sensor) column</td>
<td>hfi1-tmm-10.8.0.0-214.noarch.rpm</td>
<td>10.8.0.0.214</td>
</tr>
<tr>
<td>HFI1 SMBus Microcontroller Firmware (Thermal Monitor) CHF (temp sensor) column</td>
<td>hfi1_smbus.fw</td>
<td>10.8.0.0.214</td>
</tr>
</tbody>
</table>
Intel Hardware

The following table lists the Intel hardware supported in this release. The table does not include OEM-specific hardware, such as custom adapters and switches.

Note: The Intel® PSM2 implementation has a limit of four (4) HFIs. PR# 136552 wontfix/135816 enhancemnt.

Table 3. Supported Hardware

</table>

Installation Requirements

1.8 Installation Requirements

1.8.1 Installation Instructions

For installation details, refer to the Intel® Omni-Path Fabric Software Installation Guide.

1.8.1.1 Download the Standalone Firmware

Download the standalone firmware rpms from an Intel web page or other Intel secured location using the following procedures.

   Notes: You can manually navigate to the software using the following steps:
   a. Using a web browser, type downloadcenter.intel.com in the address field and press Enter.
   b. In the "Search downloads" field, type Omni-Path and press Enter.

2. In the Description list, select the "Intel® Omni-Path Host Fabric Interface Platform Firmware" for the version you want to install.
   Note: The latest version of each type of each download type is showing in the list. To show previous versions, select "Show more" at the bottom of the list.

3. In the "Available Downloads" list, select the files you need.
4. Review the Intel Software License Agreement.
5. Click "I accept the terms in the license agreement."
6. Save the download to your hard drive.
### 1.8.1.2 Installing and Upgrading rpms

This section provides information for installing or upgrading standalone firmware rpms.

- To install the rpms, use `rpm -ivh <rpm name>`.
- To upgrade the rpms, use `rpm -Uvh <rpm name>`.

#### Important Information for TMM Tools

- When trying to install `hfil-tmm` rpm on OPA-IFS prior to V10.4, the installation fails due to an existing version of TMM firmware owned by other rpm i.e., `hfil-firmware` rpm.

  To resolve this issue, you can safely force the installation of the rpm using the following command:

  ```
rpm -ivh --force hfil-tmm-<version>.rpm
  ```

- When trying to install a pre-10.4 version of OPA-IFS on systems where the `hfil-tmm` rpm is already installed, the `hfil-firmware` will fail to install due to existing versions owned by the `hfil-tmm`.

  To resolve this issue, you can

  - Uninstall the existing `hfil-tmm` rpm prior to the OPA-IFS installation.
  - If desired, you can safely force the installation of the rpm using the following command:

    ```
rpm -ivh --force hfil-tmm-<version>.rpm
    ```

- When trying to install `hfil-tmm` rpm on OPA-IFS versions between V10.4 and the current release (or vice versa), installation will succeed and the user can see that the TMM firmware is owned by two rpms (`hfil-tmm` and `hfil-firmware`).

  This is an expected behavior as TMM firmware in both the rpms are identical.

  ```
rpm -qf /lib/firmware/updates/hfi1_smbus.fw
  ```

  `hfil-tmm-<version>.noarch`

  `hfil-firmware-<version>.noarch`

### 1.9 Product Constraints

None.

### 1.10 Product Limitations

This release has the following product limitations:
2.0 Issues

This section lists the resolved and open issues in the Intel® Omni-Path TMM.

2.1 Resolved Issues

2.1.1 Issues Resolved in this Release

The following table lists issues that are resolved in this release.

Table 4. Issues Resolved in this Release

<table>
<thead>
<tr>
<th>ID</th>
<th>Description</th>
<th>Resolved in Release</th>
</tr>
</thead>
<tbody>
<tr>
<td>145917</td>
<td>As required by the System Management Bus (SMBus) specification, when the Bus is idle for less than 50 μs, the HFI card pulls the Bus into low voltage. However, the Bus does not remain in low voltage for a long enough interval.</td>
<td>10.8</td>
</tr>
</tbody>
</table>

2.2 Open Issues

The following table lists the open issues for this release.
