### Rationale for applied non-harmonised standards or other solutions:

- Due to the absence of harmonized standards for safety and EMC the latest ETSI EN and CENELEC standards have been used if available. Selections of actions and standards to cover all the essential requirements are also based on the Risk assessment of the Manufacturer.
- The used standard EN 50566:2013/AC:2014 will give the same presumption of compliance as if the harmonized standard EN 50566:2017 would have been used.

### Remarks:

- This Type Examination Certificate does not imply assessment of the production of the product and does not permit the use of a TÜV Rheinland mark of conformity.
- This Type Examination Certificate only relates to the assessment of technical documentation to verify that the technical design of radio equipment meets the essential requirements of the RED 2014/53/EU and will not show compliance with essential requirements of other possible applicable EU Directives.
- The manufacturer has declared in compliance with art. 10.2 that the Radio Equipment can be operated in at least one Member State without infringing applicable requirements on the use of radio spectrum.
