

# VPAT™ for Intel Unite Solution 4.0 for iOS

## Voluntary Product Accessibility Template

### Summary Table

<b>Criteria</b>	<b>Supporting Features</b>
Section 1194.21 Software Applications and Operating Systems	<b>Please refer to the attached VPAT</b>
Section 1194.22 Web-based Internet Information and Applications	<b>Not Applicable</b>
Section 1194.23 Telecommunications Products	<b>Not Applicable</b>
Section 1194.24 Video and Multi-media Products	<b>Not Applicable</b>
Section 1194.25 Self-Contained, Closed Products	<b>Not Applicable</b>
Section 1194.26 Desktop and Portable Computers	<b>Not Applicable</b>
Section 1194.31 Functional Performance Criteria	<b>Please refer to the attached VPAT</b>
Section 1194.41 Information, Documentation and Support	<b>Please refer to the attached VPAT</b>

*Section 1194.21 Software Applications and Operating Systems – Detail*

Criteria	Supporting Features	Remarks and Explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Partially Supported	Most iOS devices are not accessed by keyboard.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supported	Accessibility features and assistive applications can function while running this application.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supported	Current focus is available within this application.

<p>(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.</p>	<p>Supported</p>	<p>All elements within the application are available to Assistive Technology. All images and non-textual elements also have textual information.</p>
<p>(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.</p>	<p>Supported</p>	
<p>(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.</p>	<p>Supported</p>	
<p>(g) Applications shall not override user selected contrast and color selections and other individual display attributes.</p>	<p>Supported</p>	
<p>(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.</p>	<p>Supported</p>	<p>Animated content is Assistive Technology and VoiceOver capable.</p>
<p>(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.</p>	<p>Supported</p>	<p>Annotation colors and network status indicator are accessible to Assistive Technologies and VoiceOver.</p>

(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	Supported	The application functions with standard iOS features including color or contrast adjustments, grayscale mode and adjustable enhanced contrast mode.
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	Supported	
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Supported	All dialogs, forms and user elements are accessible via Assistive Technology such as VoiceOver.

### Section 1194.31 Functional Performance Criteria – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	Supported	All dialogs, forms and user elements are accessible via Assistive Technology such as VoiceOver.

<p>(b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.</p>	<p>Supported</p>	<p>All dialogs, forms and user elements are accessible via Assistive Technology such as VoiceOver.</p>
<p>(c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided.</p>	<p>Supported</p>	<p>Hearing is not required for application usage although files that do require hearing can be transferred. These files can take advantage of iOS's support for closed captions and CC'ed videos. Mono audio mode can also be enabled in iOS.</p>
<p>(d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.</p>	<p>Not Applicable</p>	
<p>(e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.</p>	<p>Supported</p>	<p>Speech is not required for application usage and iOS's built-in dictation as well as interaction with a mouse and keyboard is supported.</p>

(f) At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.	Supported	Full keyboard access is supported within the application.
---	-----------	---

Section 1194.41 Information, Documentation and Support – Detail

Criteria	Supporting Features	Remarks and Explanations
(a) Product support documentation provided to end-users shall be made available in alternate formats upon request, at no additional charge.	Assessed on case by case basis upon request.	
(b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	Assessed on case by case basis upon request.	
(c) Support services for products shall accommodate the communication needs of end- users with disabilities.	Supported
