

# Intel Energy Policy

At Intel Foundry, we are committed to be leaders in everything we do. We are motivated to care for people and the planet from the development of our products, through our manufacturing and supply chain. In support of our [EHS](#) and [Global Climate Change](#) policies, we have a responsibility to minimize the use of energy in our buildings, factories and supply chain. We are confident that our technology will play a key role in addressing the planet's sustainability challenges.

Through our Energy Management System, we are committed to these principles:

- Following the letter and spirit of all applicable regulatory and Intel Climate, Energy and Environmental requirements related to energy efficiency, energy use, and energy consumption, wherever we operate.
- Continually improving our Energy Management System including our business standards, culture and energy performance.
- Setting and reviewing objectives and energy targets to deliver improvement in energy performance.
- Ensuring the availability of information and necessary resources to achieve objectives and energy targets where practicable.
- Energy performance improvement and carbon intensity reduction of our operations through our design activities and procurement of energy efficient products and services.
