Wasabi Delivers Simple, Predictable, and Affordable Hot Cloud Storage

Wasabi is revolutionizing the economics of data storage by pioneering the concept of the bottomless cloud. Simply put, the bottomless cloud is the ability to store everything in a cost-effective way via a single storage tier that treats all data as hot data. One of the ways Wasabi accomplishes this is with 3rd Gen Intel[®] Xeon[®] Scalable processors and hardware-enabled Intel[®] Crypto Acceleration to help eliminate the performance overhead of data encryption. Intel[®] processors with Intel Crypto Acceleration reduce the performance impact of highly performant encryption while maintaining maximum connections per second to satisfy service level agreements. Customers benefit from a simple, predictable, highly durable cloud storage service with full end-to-end encryption.

“Our value to customers is price, performance, and protection. Our ability to deliver on those promises is made on the components we choose, and Intel helps with that.”

Jim Donovan,
SVP of Product,
Wasabi Technologies
