

Enhancing Mae Fah Luang University's IT Center with the Intel vPro® Platform

One of the Mae Fah Luang University's (MFU) goals is to be the number one leading digital university in the north of Thailand by transforming courses and curriculum to support blended learning. Therefore, it is vital for computer systems, labs, and devices to be ready and prepared for class use at all times. Intel and MFU collaborated in testing the Intel vPro® platform at the Center for Information Technology Services (CITS), which handles more than 2,000 computers across the University. This project resulted in significant enhancement of CITS services such that, with only 10 IT personnel, the Center is well equipped to manage, secure, and maintain all computers under their care more quickly and conveniently.

"We should be able to access and manage all computers in a classroom or any classroom groups, i.e. system updates and software installation."

Mr. Phinyo Kongmeelab,
Head of Secretarial and Admin, CITS
