Streamlining Farm Operations with Intel vPro® platform Remote Manageability

Scotland's Graham's the Family Dairy is known for its award-winning range of dairy products with customers both locally and globally. The dairy relies on PCs to manage nearly all production and distribution aspects of its global operation – from the flow of milk and the printing of shipping labels to the data being sent to handheld devices used by delivery people. Having already standardized its workforce on PCs powered by the Intel vPro® platform, Graham's was in a strong position to respond to change by activating the technology's hardware-based remote manageability tools: Intel® Active Management Technology and Intel® Endpoint Management Assistant. The efficiency of these manageability features help to simplify IT support of dispersed endpoints for the IT team of two, and help the business achieve increased efficiency.

> "With the Intel EMA software and Intel AMT, we can jump on and resolve problems a lot quicker than before, from wherever we are."
>
> **Daniel Baird, Head of IT, Graham's the Family Dairy**
