

“5G network is the foundation for all digital transformation initiatives. For industry 4.0, smart factory, or connecting the immersive metaverse, all you need is “HTC Reign Core”, a complete 5G private network solution in a carry case within 10 minutes setup.”

Raymond Pao
Senior VP
HTC

Private 5G Network Solution for XR Vertical Application and Metaverse Factory

HTC’s subsidiary Reign provides a 5G private network system to house all necessary networking equipment. It can help users rapidly and easily deploy the network making it available for a range of scenarios including research, smart inspections, smart education, smart training applications, and smart warehouse deployments. Considering an academic or lab application this solution provides a reliable 5G network and the ability to analyze data for development and research. Another possibility is smart inspection through gathering e-information with a portable device, constant monitoring with an AI camera, and information synchronization with a central console. HTC’s solutions makes smart education applications like remote assistance, real-time data, and training a reality using XR.
