

“Manually processing the orders, claims, receipts and uploading them to the respective OEM Portals was a very resource intensive, time consuming and challenging task. The GIBots RPA based automation solution implemented for our use cases has saved us a lot of valuable time worth 12 to 14 hours/resource daily. Thus, increasing the overall efficiency and now our team can focus more on other strategic tasks.”

Deputy General Manager – IT

GIBots DigiDoc: Accounts Payable Automation

Enabling High Volume Transaction Processing with a Centralized, Accurate, and Intelligent Data Processing Platform

GIBots DigiDoc: Accounts Payable Automation Solution is an automated, SaaS-based, intelligent document processing solution, powered by artificial Intelligence, machine learning, and natural language processing technologies. The solution helps financial and business institutions process document workloads by automatically extracting, classifying, and reconciling data from documents like invoices, POs, receipts, etc., providing actionable data and insights on real-time dashboards for quicker decision making. The data can be automatically updated into ERP and other downstream systems compliant with applicable laws on data privacy protection, helping procurement functions to swiftly respond to vendor queries and payment schedules. DigiDoc ultimately helps customers carry out internal and external processes with a faster turnaround and higher level of accuracy; supporting applications such as bank-reconciliation, automated tax-filing, and procure-to-pay automation.

Key Features

-  Text Recognition and Classification
-  Multi-lingual Processing
-  Auto-learning ML Models
-  Automated Approval Workflows

Verticals:

- Retail
- Banking/FSI
- Manufacturing
- Healthcare
- Industrial
- Transportation

Other Use Cases:

- Engineering Drawing Vectorization
- Legal Document Digitization
- Medical Records Digitization
- Logistics Document Digitization

Country/Geo:

Global
