

Delivering Future Cloud Infrastructure to Help Enterprises at Any Stage of their Cloud Journey

Present in more than 20 countries and with around 28,000 employees, T-Systems is one of the world's leading IT service providers and suppliers of digital services. To help customers move towards the cloud at their own pace, T-Systems launched Future Cloud Infrastructure (FCI)—a managed private cloud service that bridges the gap between legacy and on-premises systems as well as private and public clouds, including hyperscalers. Built on Lenovo ThinkAgile VX and ThinkSystem servers—powered by 3rd Gen Intel® Xeon® Scalable processors—and VMware Cloud Foundation, FCI brings together on-premises infrastructure, private cloud, and public cloud on one platform ecosystem.
