

# Choosing the Right Device to Grow with Students' and Educators' Computing Needs

Colegio Miramadrid serves students from pre-school through secondary school with an educational approach that balances tradition with innovation. With the pace of change in education, Miramadrid educators realized that existing laptops were no longer sufficiently powerful to meet students or their own computing needs. With school administrators, educators set out to identify a rightsized replacement device that would not only meet current educational requirements but support student learning for the next several years. The school selected Samsung Galaxy Chromebook 2 devices, powered by Intel® Core™ i3 processors, with a QLED screen. The Intel Core i3 processors offered the right blend of performance, connectivity, and security to expand with student and educator needs over time at an affordable price.

"We knew we had made the right choice when saw how pleased with the devices teachers were and heard students' saying, 'Teacher, this Chromebook flies!'"

**Javier Ferrero Saavedra**  
Vice-President of the  
Governing Council,  
Colegio Miramadrid
