

34% cost-saving potential and immediate 30% cost-saving opportunities without impacting performance.¹

“HCLTech’s collaboration with Intel on the Intel® Cloud Optimizer powered by Densify has yielded desired results for the Internal IT team, HCLTech’s cloud knowledge meets Intel’s innovation to optimize cloud workloads, driving cost savings.”

Sunit Tyagi, Senior Vice President - Information Technology, HCLTech

Achieving True Cost Efficiency in the Cloud

HCLTech, a leading global IT services company, has a vast cloud infrastructure across various geographical locations and caters to diverse client needs. The company had limited visibility into how its cloud resources were used across its extensive infrastructure. Coupled with fluctuating operational needs, this made the task of manual cost optimization a complex and time-consuming endeavor. To address this, HCLTech deployed the Intel® Cloud Optimizer powered by Densify, a Software as a Service (SaaS) technology designed to offer data-driven insights and recommendations for optimizing cloud instances. Leveraging advanced algorithms and analytics, the Intel Cloud Optimizer provides HCLTech with a scientific basis for making informed decisions about its cloud infrastructure, achieving cost efficiency for its cloud workloads.
