

Delivering Personalized Diagnostic Testing and Medical Treatment

Shanghai Pudong New Area Gongli Hospital is a leading tertiary-level hospital in China, treating more than 2 million patients each year. The hospital's existing server and storage infrastructure could no longer meet its needs in terms of flexibility, efficiency, stability, availability, and simplicity. To meet the new national guidelines, the hospital needed upgrade the IT infrastructure underpinning its core picture archiving and communications system (PACS). With a new hyperconverged infrastructure (HCI) based on Lenovo ThinkAgile HX5520 appliances, powered by 2nd Gen Intel® Xeon® Scalable processors, the hospital upgraded the infrastructure underpinning its core PACS, helping clinicians to collaborate on patient diagnosis and care more efficiently.
