Documentation Conventions

The Quartus II Installation & Licensing for PCs manual uses the following conventions to make it easy for you to find and interpret information.

Terminology

The following terminology is used throughout the Quartus II Installation & Licensing for PCs manual:

<table>
<thead>
<tr>
<th>Term:</th>
<th>Meaning:</th>
</tr>
</thead>
<tbody>
<tr>
<td>“click”</td>
<td>Indicates a quick press and release of the left mouse button.</td>
</tr>
<tr>
<td>“double-click”</td>
<td>Indicates two clicks in rapid succession.</td>
</tr>
<tr>
<td>“choose”</td>
<td>Indicates that you need to use a mouse or key combination to start an action.</td>
</tr>
<tr>
<td>“select”</td>
<td>Indicates that you need to highlight text and/or objects or an option in a dialog box with a key combination or the mouse. A selection does not start an action. For example: Select Chain Description File, and click OK.</td>
</tr>
<tr>
<td>“turn on” / “turn off”</td>
<td>Indicates that you must click a check box to turn a function on or off.</td>
</tr>
</tbody>
</table>

Typographic Conventions

The Quartus II Installation & Licensing for PCs manual uses the following typographic conventions:

<table>
<thead>
<tr>
<th>Visual Cue:</th>
<th>Meaning:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bold Initial Capitals</strong></td>
<td>Command names, dialog box titles, tab names, page names, and button names are shown in bold, with initial capital letters. For example: Find Text command, Save As dialog box, and Start button.</td>
</tr>
</tbody>
</table>
Visual Cue:  | Meaning:
---|---
**bold** | Directory names, project names, disk drive names, file names, file name extensions, software utility names, and options in dialog boxes are shown in bold. Examples: `\altera\quartus42` directory, `d:` drive, `license.dat` file.

**Initial Capitals** | Keyboard keys, user-editable application window fields, and menu names are shown with initial capital letters. For example: Delete key, the Options menu.

**“Subheading Title”** | Subheadings within a manual section are enclosed in quotation marks. In manuals, titles of Help topics are also shown in quotation marks.

*Italic Initial Capitals* | Help categories, manual titles, section titles in manuals, and application note and brief names are shown in italics with initial capital letters. For example: *FLEXlm End Users Guide*.

*italics* | Variables are enclosed in angle brackets (`< >`) and shown in italics. For example: `<file name>`, `<CD-ROM drive>`.

**Courier font** | Anything that must be typed exactly as it appears is shown in Courier. For example: `\quartus\bin\lmutil lmhostid`.

- | Bullets are used in a list of items when the sequence of the items is not important.

✓ | The checkmark indicates a procedure that consists of one step only.

 mano | The hand points to information that requires special attention.

 ▼ | The feet show you where to go for more information on a particular topic.

 Enter or Return key.
Installing the Quartus II Software & Related Software

This section describes the requirements and procedures for installing the following software CD-ROM versions (some listed CD-ROMs may not be included in your current Altera® Package):

- Quartus® II Design Software for PCs Version 4.2
- Altera VHDL & Verilog HDL Simulation Tool for Use with the Quartus II Software (Model Technology™ ModelSim®) Version 5.8e
- Nios II Embedded Processor, Evaluation Edition, version 1.1

Quartus II System Requirements

Your system must meet the following minimum requirements:

- Intel Pentium II PC running at 400 MHz or faster with 256-MB system memory (faster systems give better software performance)
- 1.2 GB of available disk space on the drive or partition where you are installing the Quartus II software and an additional 5.2 MB on the drive containing your system directory
- Microsoft Windows NT version 4.0 (Service Pack 4 or later), Windows 2000, or Windows XP
- Microsoft Windows–compatible SVGA monitor
- CD-ROM drive
- One or more of the following ports:
  - Parallel port for use with the ByteBlaster™ II or ByteBlasterMV™ parallel port download cable
  - Serial port for use with the MasterBlaster™ communications cable
USB port for use with the USB-Blaster™ download cable, the MasterBlaster communications cable, and the Altera Programming Unit (APU) (Windows 2000 and Windows XP only)

- 10/100 Mb Ethernet connection for use with the EthernetBlaster download cable

- Microsoft Internet Explorer software version 5.0 or later

You should have Microsoft Internet Explorer software version 5.0 or later installed, because portions of the Internet Explorer software are required to use the Quartus II online Help system. However, you do not need to make the Internet Explorer browser your default browser. You may need to configure the Internet Explorer software to work with your company network. For example, you may need to configure for a dial-up connection or for a proxy server. If necessary, you can download the Internet Explorer software from the Microsoft Internet Explorer web site at www.microsoft.com/ie/.

Refer to the readme.txt file, which is located in the quartus directory on the Quartus II Design Software for PCs CD-ROM, for specific information about disk space and memory requirements in the current version of the Quartus II software. After installation, the readme.txt file is available from the Quartus II Help menu and in the Quartus II system directory.

In addition, the most current version of the Quartus II Installation & Licensing for PCs manual is available in Adobe Portable Document Format (PDF) from the Literature section of the Altera web site at www.altera.com/literature, and may contain updated information about system requirements.

For the latest information on new features, device support, EDA interface support, and known issues and workarounds for the Quartus II software, refer to the Quartus II Software Release Notes document, which is available at www.altera.com/literature/rn/rn_qts.pdf.

For general information about Quartus II software features and how they work with your design flow, refer to the Introduction to Quartus II manual, which is included in your Quartus II software package and is also available from the Literature section of the Altera web site at www.altera.com/literature.
For more information about Altera programming hardware, refer to the following table:

<table>
<thead>
<tr>
<th>For Information About</th>

These user guides are available from the Literature section of the Altera web site at [www.altera.com/literature](http://www.altera.com/literature).

### Uninstalling Previous Versions of the Quartus or Quartus II Software

If you have installed a previous version of the Quartus® or Quartus II software, you can uninstall that software, if you wish, before installing the current version of the Quartus II software.

To uninstall a previous version of the Quartus or Quartus II software:

- Choose **Programs > Altera > Quartus <version number> Uninstall, Repair or Modify** (Windows Start menu).
Installing the Quartus II Software

The Quartus II software uses a Setup program for installation.

You should be aware of the following information before you install the Quartus II software:

- You must have system administration (Administrator) privileges.

- By default, the Setup program installs the Quartus II software in the `<drive>\altera\quartus<version number>` system directory, where `<version number>` is the number of the Quartus II software version; for example, the default directory for the Quartus II software version 4.2 is `<drive>\altera\quartus42`.

- You can install multiple copies of the same version of the Quartus II software on the same PC. Subsequent installations of the Quartus II software can have a user-defined name. By default, the Setup program uses the format “Quartus II `<version number>` (Copy `<number>`)” for multiple copies, where Copy `<number>` is the number of Quartus II software installations that are installed on the PC. When installing a Quartus II service pack on a PC that has multiple copies of the same version of the Quartus II software installed, the installation program allows you to choose the copy of the Quartus II software that will receive the service pack.

- If you want to preserve project compilation databases from an earlier version of the Quartus II software before installing a newer version, Altera recommends that you open the design in the earlier version of the software and export a version-compatible database for the design by using the Export Database command (Project menu). After you have installed a newer version of the Quartus II software, you can import the database in the new version by using the Import Database command (Project menu). For more information about importing and exporting version-compatible databases, see “Overview: Using Version-Compatible Database Files” in Quartus II Help. Version-compatible database files are available in Quartus II software version 4.1 and later.
Follow these steps to run the Setup program on your PC:

1. Insert the Quartus II Design Software for PCs CD-ROM into your CD-ROM drive. The Quartus II Install CD window appears automatically, offering several options. If the CD-ROM is in the drive, and the Setup program is not already running, start the Setup program manually by performing the following steps:
   a. Choose Run (Windows Start menu).
   b. In the Run dialog box, type `<CD-ROM drive>\install`.
   c. Click OK.

2. Click the Install Quartus II and Related Software button to install the Quartus II software and related software. The Setup program starts automatically and guides you through the installation process.

   The Setup program also allows you to install Model Technology ModelSim-Altera software, the MegaCore IP Library, and the Nios II Embedded Processor Evaluation Edition software. The CD-ROMs for this software are included in the Quartus II subscription packages, but may not be included in the Altera development and Altera partner kits. To install these programs, make sure the ModelSim-Altera, MegaCore IP Library, or Nios II Embedded Processor, Evaluation Edition options are turned on. If you decide to install these software tools at another time, follow the installation instructions located in “Installing the Model Technology ModelSim Software” on page 6, “Installing the MegaCore IP Library” on page 7, or “Installing the Nios II Embedded Processor Software” on page 8.

You can select a full installation or a custom installation. If you select a custom installation, you can select which device families you want to install, and you can also select whether you want to install EDA interfaces or tutorial files.

You must install support for Cyclone™ EP1C6 devices if you want to complete the Basic or LogicLock™ Quartus II tutorial. In addition, you must install support for MAX® II EPM570 and Stratix® EP1S25 devices if you want to complete the Optional MAX+PLUS® II conversion and Stratix tutorial modules.
3. If you want to install the Stand-Alone Programmer and the Stand-Alone SignalTap® II Logic Analyzer, click the **Install Stand-Alone Programmer** button. The Setup program starts automatically and guides you through the installation process.

4. If you will run the Quartus II software using a network (multiuser) license, and not a node-locked (single-user) license, click the **Install FLEXlm Server** button to install the FLEXlm License Manager software on the license server only. The Setup program installs the FLEXlm License Manager version 9.2 on the user workstation.

The Quartus II software supports network license servers on PCs running Windows NT 4.0, Windows 2000, and Windows XP; on UNIX workstations running Solaris 8 or 9, or HP-UX 11.0; and on PCs running Linux (Red Hat Linux 7.3 or 8.0 or Red Hat Enterprise Linux 3.0). You do not need to install the FLEXlm License Manager software on network client PCs or on PCs running the Quartus II software using a node-locked (single-user) license. Refer to “Upgrading or Setting Up a License Manager Server” on page 16 for more information about setting up the license manager server.

### Installing the Model Technology ModelSim Software

You can install the Model Technology ModelSim software on PCs running Windows NT 4.0, Windows 2000, or Windows XP. The ModelSim-Altera **readme** file in the *modelsim* directory on the CD-ROM provides information on the ModelSim-Altera software operating requirements and licensing. You should read the **readme** file before installing the ModelSim-Altera software.

To install the ModelSim-Altera software on a PC, follow these steps:

1. Insert the Altera VHDL & Verilog HDL Simulation Tool for Use with the Quartus II Software (Model Technology ModelSim) CD-ROM into your CD-ROM drive.

2. Choose **Run** (Windows Start menu).
3. In the Run dialog box, type <CD-ROM drive>:\modelsim\pc\modelsim-altera.exe.

4. Click OK. The Setup program starts automatically and guides you through the installation process.

Installing the MegaCore IP Library

You can install the MegaCore IP Library on PCs running Windows NT 4.0, Windows 2000, or Windows XP. The MegaCore IP Library readme.txt file in the top-level directory on the CD-ROM provides information on the MegaCore IP Library. You should read the readme.txt file before installing the MegaCore IP Library.

To install the MegaCore IP Library on a PC, follow these steps:

1. Insert the MegaCore IP Library CD-ROM into your CD-ROM drive.

2. Choose Run (Windows Start menu).

3. In the Run dialog box, type <CD-ROM drive>:\windows\setup.exe.

4. Click OK. The Setup program starts automatically and guides you through the installation process.

For more information about using MegaCore functions with the Quartus II design software, refer to the MegaCore user guides that are installed with the MegaCore IP Library.
Installing the Nios II Embedded Processor Software

You can install the Nios II Embedded Processor Evaluation Edition software on PCs running Windows NT 4.0, Windows 2000, or Windows XP. The Nios II Embedded Processor readme file in the top-level directory on the CD-ROM provides information on the Nios II Embedded Processor software. You should read the readme file before installing the Nios II Embedded Processor software.

To install the Nios II Embedded Processor software on a PC, follow these steps:

2. Choose Run (Windows Start menu).
3. In the Run dialog box, type `<CD-ROM drive>:\launcher.exe`.
4. Click OK. The Setup program starts automatically and guides you through the installation process.

Installing the TCP/IP Protocol

If you do not already have the TCP/IP protocol installed on the PCs in your network, you must add it to your networking configuration. These instructions apply only to PCs running Windows NT.

Follow these steps to install the TCP/IP protocol:

1. Close all other programs.
2. Insert your Windows operating system CD-ROM into your CD-ROM drive.
3. Choose Settings > Control Panel (Windows Start menu).
4. Double-click the **Network** icon in the Control Panel window.

5. In the **Network** dialog box, click the **Protocols** tab.

6. Click the **Add** button. The **Select Network Protocol** dialog box appears.

7. In the **Select Network Protocol** dialog box, select **TCP/IP Protocol** from the **Network Protocol** list.

8. Click **OK**.

9. In the **Windows NT Setup** dialog box, make sure the directory path is `<CD-ROM drive>:\i386`.

10. Click **Continue**.

11. In the **Network** dialog box, click **Close** after all files have been copied.

12. When you are asked if it is OK to restart your computer, click **Yes**.

For information about installing the TCP/IP protocol on PCs running Windows 2000 or Windows XP, refer to your Windows 2000 or Windows XP documentation or to the Microsoft web site at [www.microsoft.com](http://www.microsoft.com).
Licensing the Quartus II Software

This section describes how to license the Quartus II software. To set up your license for the Quartus II software, you must perform the following steps, each of which is described in more detail in this section:

If you are using a node-locked (FIXEDPC) license and are a new user or are upgrading to a new version of the Quartus II software, you can perform an automatic web license retrieval at startup, which allows you to upgrade your license file automatically. For more information on this option, go to “Starting the Quartus II Software” on page 23.

1. If necessary, obtain a license file. The Quartus II software requires a valid, unexpired license.dat license file for each server that supports a network (multiuser) license or for each node-locked (single-user) license. This same license file can also enable the additional Altera synthesis and simulation tools included with Altera software subscriptions, as well as the MAX+PLUS II software.

2. If you are using a network license (FLOATPC, FLOATNET, or FLOATLNX), modify the license file.

3. If you are using a network license, set up and configure the FLEXlm license manager server.

   or

   If you are using a node-locked (FIXEDPC) license, install a Sentinel Software Guard.

4. Start the Quartus II software.

5. Specify the location of the license file.

6. (Optional) Register for an Altera.com account.
Obtaining a License File

When you start the Quartus II software, if the software cannot detect a valid license file, you are asked whether you want to run in evaluation mode for 30 days, perform an automatic license retrieval from the Altera web site, or specify the correct location of a valid license file.

You can also obtain an ASCII license file, license.dat, from the Licensing section of the Altera web site at www.altera.com/licensing if you have the following information:

- Your Altera ID, which is a six-digit number that is provided when you purchase the Quartus II development system. This number is listed on the packing list that is shipped with the Quartus II software.

- Your serial number, which can be one of the following numbers:
  - If you have a network (multiuser) license version of the Quartus II software, the serial number is printed on the side of the Quartus II shipping box, and on the Registration & License File Request Form, which is also included with the Quartus II software package. This number begins with the letter G, and is followed by five digits (Gxxxxx).
  - If you have a node-locked (single-user) version of the Quartus II software, the serial number is the number on your Software Guard. This number begins with the letter T.

- Your Network Interface Card (NIC) number. To find your Windows NT, Windows 2000, or Windows XP server NIC number by using FLEXlm utilities, type the following command at a command prompt:

  `<drive>:\altera\quartus<version number>\bin\lmutil lmhostid`

For information about additional methods of finding your NIC number, refer to the Altera Find Answers page, which is available from the Support Center section of the Altera web site at www.altera.com/answers. For complete information about using the FLEXlm utilities, you should refer to the FLEXlm End Users Guide, which is available from the Support Services section of the Macrovision web site at www.macrovision.com.
To obtain a license file, follow these steps:

1. Altera recommends that you save any previous *license.dat* file in a temporary directory, in case you need to refer to it later.

2. Start the Quartus II software as described in the “Starting the Quartus II Software” on page 23.

3. Select **Perform automatic web license retrieval** to request a valid license file automatically from the Altera website. If you are using a node-locked (FIXEDPC) license and the Quartus II software is able to retrieve a license file successfully from the website, you can skip the remaining steps of this procedure. If you are using a network (multiuser) license, or if the Quartus II software is not able to retrieve a license file, you are guided through the licensing procedure.

   *or*

   To request a license file at a later time, go to the Licensing section of the Altera website at [www.altera.com/licensing](http://www.altera.com/licensing). The Altera Software Licensing page is displayed.

4. If you are using a node-locked (single-user) license, select the FIXEDPC license option.

   *or*

   If you are using a network (multiuser) license, select the FLOATPC, FLOATNET, or FLOATLNX license option.

5. You will receive an e-mail from Altera with a *license.dat* file attached, as well as the license file text. Altera recommends using the attached license file if you are using a node-locked (single-user) license. If you are using a network (multiuser) license, you may either use the attached license file, or copy the lines from the attached license file to an existing license file. If you are using the *license.dat* file with both the Quartus II software and the MAX+PLUS II software, Altera recommends that you save the *license.dat* file in a top-level directory named `<drive>:\flexlm`.

Figure 1 shows the Quartus II **FEATURE** line of a sample license file for a node-locked (single-user) license that uses a Software Guard.
If you are using the Quartus II software with a node-locked (single-user) license, skip to “Installing a Sentinel Software Guard” on page 20.

The FLEXlm licensing scheme allows you to set up three redundant license servers to serve a network (multiuser) license. You can obtain a license file for redundant servers by performing the steps described earlier in this section for obtaining a license file. Figure 3 shows a sample redundant server license file.
For additional information about setting up and administering license servers, including setting up three redundant license servers, refer to the FLEXlm End Users Guide, which is available from the Support Services section of the Macrovision web site at www.macrovision.com.

Modifying the License File

If you have a network (multiuser) license, the license.dat file must be modified before it can be used by the license server. See Application Note 340 (Altera Software Licensing), which is available from the Literature section of the Altera web site at www.altera.com/literature, for a detailed description of the license file.

If you have a node-locked (single-user) license, you can skip this section and go to “Installing a Sentinel Software Guard” on page 20.
The first few lines of the license file are shown in the following example (your license file may not contain all the VENDOR entries, depending on which software you have enabled):

SERVER <host name> <8- or 12-character host or NIC ID> <port number>
VENDOR alterad "<path to daemon executable>
VENDOR mgcld "<path to daemon executable>"

To modify the license file, follow these steps:

1. In the license.dat file, type the variables that are described in Table 1. The host or NIC ID will already be entered in the license file.

Table 1. Variables to Modify in the License File (license.dat)

<table>
<thead>
<tr>
<th>Variable Name</th>
<th>Description</th>
<th>Directory</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;host name&gt;</td>
<td>The host name of the server; for example, my_server.</td>
<td></td>
</tr>
<tr>
<td>&lt;port number&gt;</td>
<td>The port number for the license manager service on the server; for example,</td>
<td></td>
</tr>
<tr>
<td>(1)</td>
<td>1800. The port number is optional and should be different from the port</td>
<td></td>
</tr>
<tr>
<td></td>
<td>number for any other service on the machine.</td>
<td></td>
</tr>
<tr>
<td>alterad &quot;&lt;path to daemon executable&gt;&quot;</td>
<td>Path to the Altera vendor daemon executable alterad.</td>
<td>&lt;Quartus II system directory path&gt;\bin\alterad.exe</td>
</tr>
<tr>
<td>(2)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>mgcld &quot;&lt;path to daemon executable&gt;&quot;</td>
<td>Path to the Mentor Graphics vendor daemon executable mgcld.</td>
<td>&lt;ModelSim-Altera system directory&gt;\win32aolem\mgcld.exe</td>
</tr>
<tr>
<td>(2)(3)(4)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Notes:

(1) If you do not specify a port number in the license file, the FLEXlm License Manager will automatically choose a free port between 27000 and 27009. However, to prevent port number conflicts, you can specify a port number. If three redundant servers are being used, you must specify a port number. For PC-based license servers, Altera recommends that you specify a port number of 1800. However, you can use any unused port number between 0 and 64000.

(2) In some network environments, the license server does not have an installation of the software tool(s) that provides the necessary vendor daemon (alterad or mgcld). In this case, copy the required daemon from another machine that does have an installation of the software. Find the file in the directory location specified. Save the file in a similarly named directory or any other location on the license server. Specify the daemon location on the license server in the license file.

(3) If the path to the server has spaces in it, enclose the full path in quotation marks.

(4) If you are not using a license file for the ModelSim-Altera software, you may delete this line.
2. Save the license file with a .dat extension. Altera recommends that you name your license file license.dat.

3. Make sure the license file meets these guidelines:
   
   – The license file name must have a .dat extension. If your text editor adds .txt or another extension to the file name, such as license.dat.txt, you must rename the file to have only a .dat extension.

   – The license file must have a carriage return at the end of the last FEATURE line.

   – Any FEATURE line that wraps to a second or third line must contain a backslash (\) at the end of each line to indicate that it continues.

For additional information about modifying the license file for the Quartus II and MAX+PLUS II software and other EDA tools, refer to Application Note 340 (Altera Software Licensing).

Upgrading or Setting Up a License Manager Server

This section provides instructions for upgrading or setting up the FLEXlm License Manager server software on a PC running Windows NT 4.0, Windows 2000, or Windows XP. A system administrator should perform these steps to configure license servers after the Quartus II software is installed.

If you have a node-locked (single-user) license, you can skip this section and go to “Installing a Sentinel Software Guard” on page 20.
Upgrading the FLEXlm License Server Software

To support network licensing, the Quartus II software requires the FLEXlm License Manager software version 8.0 or later. The Quartus II Setup program installs version 9.2 of the FLEXlm License Manager server software on your user workstation, but you should also verify that the version of the FLEXlm License Manager software or the license server is 8.0 or later. Go to “Installing the Quartus II Software” on page 4 for more information on installing the FLEXlm License Manager server software. If the FLEXlm License Manager software is version 8.0 or later, skip to “Rereading an Existing License File” on page 18.

To determine which version of the FLEXlm License Manager server software you are using:

- On the computer running the FLEXlm License Manager server software, type the following commands at a command prompt:

  `<drive>:\<FLEXlm system directory path>\lmgrd -v`
  `<drive>:\<FLEXlm system directory path>\alterad -v`

If the `lmgrd` or `alterad` daemons are not from the FLEXlm software version 8.0 or later, you must upgrade both daemons with the versions provided in the installation of the Quartus II software.

To upgrade an older version of the FLEXlm License Manager server software, follow these steps:

1. Make a backup copy of the `lmgrd` and `alterad` daemons you are currently using.

2. To overwrite or replace the daemons you are currently using, copy the new versions of the files to the computer running the license server. You may have to shut down the license server software to complete this step.

If you used the Quartus II Setup program to install the FLEXlm License Manager server software, the current version of the `lmgrd` and `alterad` daemons are located in the following location:

  `<drive>:\<Quartus II system directory path>\bin\alterad`
  `<drive>:\<Quartus II system directory path>\bin\lmgrd`
3. Copy the FLEXlm software lmutil utility from the Quartus II system directory to the license server.

4. Restart the FLEXlm license server by typing the following commands at a command prompt:

   `<drive>:\<FLEXlm system directory path>\lmutil -c lmdown
   <license file path> ⇪
   <drive>:\<FLEXlm system directory path>\lmgrd -c
   <license file path> [-l <optional log path>] ↩`

Rereading an Existing License File

The Quartus II software uses the FLEXlm software to administer licensing for single users or for multiple users in a network installation. If you have an existing FLEXlm license server with an existing license file for the MAX+PLUS II software or software from another vendor, and the FLEXlm license server is version 8.0 or later, you can add, by copying and pasting, the Altera FEATURE lines from your Quartus II license.dat file into your existing license file. Paste the Quartus II FEATURE line as shown in the sample license file in Figure 2 on page 13. Make sure you have also modified the license file according to the guidelines in "Modifying the License File" on page 14.

If you make these changes to your license file, you must reread the license file or restart the license server before you can run the Quartus II software for the first time.

Refer to “Upgrading or Setting Up a License Manager Server” on page 16 to verify that you are using the latest supported version of the FLEXlm License Server software, or if you need to upgrade an older version of the FLEXlm License Server software.

If you do not have an existing FLEXlm license server, and you need to configure a new license server, skip to “Configuring a New License Server” on page 19.

To reread your license file on a license server:

✓ Type the following command at a command prompt:

   `<drive>:\<Quartus II system directory>\bin\lmutil lmreread`
or

✓ Restart the license server.

For complete information about using the FLEXlm utilities to administer and troubleshoot the FLEXlm License Manager software, refer to the FLEXlm End Users Guide, which is available from the Support Services section of the Macrovision web site at www.macrovision.com.

Configuring a New License Server

The Quartus II software uses the FLEXlm software to administer licensing for single users or for multiple users in a network installation. If you do not have an existing FLEXlm license server, you must configure a license server before starting the Quartus II software for the first time.

You should be aware of the following information before you configure a new license server:

■ If you have an existing FLEXlm license server, refer to “Rereading an Existing License File” on page 18.

■ Make sure you have obtained a valid license file according to the guidelines in “Obtaining a License File” on page 11, and that you have modified the license file according to the guidelines in “Modifying the License File” on page 14.

■ These instructions assume that you have installed the license.dat file in the <drive>:\flexlm directory. If you have installed the license file in a different directory, substitute the appropriate path name for that directory.

To configure a new license server:

✓ Type the following command at a command prompt:

<drive>:\<Quartus II system directory>\bin\lmgrd -c
<license file path>\license.dat

For more specific information about configuring a new UNIX workstation license server, refer to the readme.txt file, which is located in the top-level directory of the Quartus II software CD-ROM. For additional information
about setting up and administering license servers, including setting up three redundant license servers, refer to the FLEXlm End Users Guide, which is available from the Support Services section of the Macrovision web site at www.macrovision.com.

**Installing the FLEXlm Software on Another License Server**

You can install the FLEXlm software on an additional license server.

To install the FLEXlm software on another license server, perform the following steps:

1. Create a directory named `<drive>\<Quartus II system directory>\bin` on the additional license server.

2. Copy the following files from the `<drive>\<Quartus II system directory>\bin` directory of your original Quartus II software into the new directory:
   - `lmgrd`
   - `lmutil`
   - `alterad`

You can also install the FLEXlm software on another license server with the **Install FLEXlm Server** button in the Setup program. Refer to “Installing the Quartus II Software” on page 4 for more information.

**Installing a Sentinel Software Guard**

If your Quartus II development system uses a node-locked license and includes a Sentinel Software Guard, you must make sure the Sentinel driver is installed and then install the Software Guard before you can specify a license file.
You should be aware of the following information before you install a Sentinel Software Guard:

- If you have a network (multiuser) license, you can skip this section and go to “Starting the Quartus II Software” on page 23.

- Current Quartus II single-user license packages provide USB Software Guards only. Parallel Port Software Guards are no longer provided in Quartus II software packages; however, they are still supported for backward compatibility.

### Installing the Sentinel Driver

The Sentinel driver is required for all Quartus II software systems running on Windows NT, Windows 2000, and Windows XP that use a USB or Parallel Port Software Guard. The Sentinel driver is installed automatically with the Quartus II software.

![Installing the Sentinel driver requires that you have system administration (Administrator) privileges.](image)

If the Sentinel driver is not installed, you can install it by following these steps:

1. Choose **Run** (Windows Start menu).

2. If you are installing the USB Software Guard, type the following command in the **Run** dialog box:

   ```
   <drive>:\<Quartus II system directory>\drivers\sentinel\setup.exe /usb /q3
   ``

   or

   ```
   <drive>:\<Quartus II system directory>\drivers\sentinel\setup.exe /q3
   ```

3. In the **Sentinel Driver Setup Program** window, choose **Install Sentinel Driver** (Functions menu).
4. In the Sentinel Install dialog box, click OK.

5. Restart your computer at the prompt.

Installing the USB Software Guard

The USB Software Guard is supported only on PCs running Windows XP. If you are using a node-locked (single-user) license on PC with Windows NT or Windows 2000, you must use a Parallel Port Software Guard. Refer to "Installing the Parallel Port Software Guard" on page 22 for more information.

1. Locate an unused USB port on the computer.

2. Insert the USB Software Guard into USB port.

Installing the Parallel Port Software Guard

To install the Parallel Port Software Guard on a PC running Windows NT, Windows 2000, and Windows XP, follow these steps:

1. Locate a parallel printer port (that is, an LPT port) on the computer. If you have a printer connected to this port, you must disconnect it temporarily.

2. Insert the 25-pin male connector end of the Software Guard into the 25-pin female connector of the parallel printer port, as shown in Figure 4.

You should be aware of the following information after you insert a Parallel Port Software Guard:

- Do not connect disk drives that use the parallel port or any device, other than a printer or the ByteBlaster II or ByteBlasterMV download cable, to either end of the Parallel Port Software Guard. Disk
drives can destroy a Parallel Port Software Guard by drawing more power than the guard is capable of handling.

- Disconnect the Parallel Port Software Guard before using the parallel port to transfer data between computers using a data transfer program. Failure to do so can cause damage to the Parallel Port Software Guard.

3. If necessary, reinsert the printer cable connector into the female connector of the Parallel Port Software Guard.

**Starting the Quartus II Software**

You can start the Quartus II software after installation is complete. In order to enable Quartus II features, however, you must specify the license file, either within or outside the Quartus II software. For information about how to specify your license file, refer to the next section, “Specifying the License File.”
To start the Quartus II software:

- Choose Programs > Altera > Quartus II <version number> (Windows Start menu).

- or

- Open a new command prompt window and type the following command:

  `<drive>:\<Quartus II system directory>\bin\quartus`  

If you do not have Administrator privileges and you use the Quartus II software from a network drive, some components of the Quartus II software may not work correctly.

When you start the Quartus II software, if the software cannot detect a valid license file, you will see a prompt with the following options:

- **Enable 30-day evaluation period with no license file (no programming file support)** — This option allows you to continue to use the Quartus II software for 30 days without programming file support. After 30 days, you must have a valid license file in order to use the software.

- **Perform automatic web license retrieval** — This option displays the Licensing section of the Altera web site, which allows you to request a license file automatically. If you are using a node-locked (FIXEDPC) license, the Quartus II software retrieves the license file automatically from the web site. If you are using a network (multiuser) license, or if the Quartus II software is not able to retrieve a license file, you are guided through the licensing procedure. See “Obtaining a License File” on page 11 for more information.

- **Specify valid license file** — This option displays the License Setup page of the Options dialog box, which allows you to specify the location of your license file. See the next section, “Specifying the License File,” for more information.
Specifying the License File

Once you have obtained a license file and set up a network license server (for multiuser licenses) or installed a USB or Parallel Port Software Guard (for single-user licenses), you must specify the location of the license file for each user (or “client”). You can specify the license file with one of the following methods, which are described in more detail in this section:

- Specify the license file using the Quartus II software
- Specify the license file using the Windows NT, Windows 2000, or Windows XP System control panel

If you are using the Model Technology ModelSim-Altera simulation software, which is included with Altera software subscriptions, and/or you are using the MAX+PLUS II software, you must specify the license file with the System control panel.

Specifying the License File Using the Quartus II Software

You can specify the location of your license file from within the Quartus II software.

Specifying the license file from within the Quartus II software does not require system administration (Administrator) privileges.

To specify your license file within the Quartus II software, follow these steps:

1. Start the Quartus II software as described in the “Starting the Quartus II Software” on page 23.

When you start the Quartus II software, if the software cannot detect a valid license file, you are asked whether you want to run in evaluation mode for 30 days, request a valid license file automatically from the Altera web site, or specify the correct location of a valid license file.
2. Select **Specify valid license file** to specify the name of the license file. The **License Setup** page of the **Options** dialog box (Tools menu) is displayed. Figure 5 shows the **License Setup** page.

![Figure 5. License Setup Page of the Options Dialog Box](image)

3. In the **License file** box, specify the full path name of your **license.dat** file. You can click **Browse (..)** to locate your **license.dat** file. Altera recommends that you store the **license.dat** file in a directory named `<drive>\flexlm`. 

---

**Quartus II Installation & Licensing for PCs**

26 Altera Corporation
You can also specify the location of the license file by typing a name of the format `<port>@<host>` instead of a license file path name, where `<host>` is the name of the server on which the license file is stored and `<port>` is the port listed in the `license.dat` file. Refer to Figure 2 on page 13 for a sample network license file to determine your port and server name, and see Table 1 on page 15 for more information about port numbers. If there is no port listed in the `license.dat` file, you can simply specify `@<host>`.

If you have more than one license file or server, separate the port and host specifications with semicolons (`;`), with no spaces between the names and numbers.

or

If you want to use the current `LM_LICENSE_FILE` value specified in the System Control Panel, turn on Use `LM_LICENSE_FILE` variable.

4. If you want the Quartus II software to check the Altera web site automatically for license file updates, click Web License Update.

5. If you want to use the Quartus II software in the “Subscription Expiration” grace period and did not already specify that option at startup, click Begin 30-day Grace Period. The “Subscription Expiration” grace period allows you to use the Quartus II software with programming file support for 30 days. When the grace period expires, you must obtain an updated license file at the Altera web site to continue using the Quartus II software with programming file support.

6. Click OK.

The Licensed AMPP/MegaCore functions list of the License Setup page lists all of the AMPP and MegaCore functions that are available for the license.
Specifying the License File Using the Windows NT, Windows 2000, or Windows XP System Control Panel

You can specify the location of your license file from outside the Quartus II software by setting system variables in the Windows NT, Windows 2000, or Windows XP System Control Panel.

Specifying the license file in the System Control Panel requires that you have system administration (Administrator) privileges.

To specify the license file in the Windows NT System Control Panel, follow these steps:

1. Choose Settings > Control Panel (Windows Start menu).
2. Double-click the System icon in the Control Panel window.
3. In the System Properties dialog box, click the Environment tab.
4. Click the System Variable list to highlight it, and then in the Variable box, type LM_LICENSE_FILE.
5. In the Value box, type either <drive>:\flexlm\license.dat or a name of the format <port>@<host>, where <host> is the name of the server and <port> is the port listed in the license.dat file. Refer to Figure 2 on page 13 for a sample network license file to help you determine your port and server name. Refer also to Table 1 on page 15 for more information about port numbers. If there is no port listed in the license.dat file, you can simply specify @<host>.
   If you have more than one license file or server, separate the port and host specifications with semicolons (;), with no spaces between the names and numbers.
6. Click OK.

To specify the license file in the Windows 2000 or Windows XP System Control Panel, follow these steps:

1. Choose Settings > Control Panel (Windows Start menu).
2. Double-click the System icon in the Control Panel window.
3. In the **System Properties** dialog box, click the **Advanced** tab.

4. In the **Advanced** tab, click **Environment Variables**.

5. Under **System Variables**, click **New**. The **New System Variable** dialog box is displayed.

6. In the **Variable Name** box, type **LM_LICENSE_FILE**.

7. In the **Variable Value** box, type either `<drive>:\flexlm\license.dat` or a name of the format `<port>@<host>`, where `<host>` is the name of the server and `<port>` is the port listed in the `license.dat` file. Refer to Figure 2 on page 13 for a sample network license file to help you determine your port and server name. Refer also to Table 1 on page 15 for more information about port numbers. If there is no port listed in the `license.dat` file, you can simply specify `@<host>`.

   If you have more than one license file or server, separate the port and host specifications with semicolons (`;`), with no spaces between the names and numbers.

8. Click **OK**.

   If you want the Quartus II software to use the **LM_LICENSE_FILE** setting from your **System Control Panel** rather than from another license file setting, make sure **Use LM_LICENSE_FILE variable** is turned on in the **License Setup** page of the **Options** dialog box (Tools menu).

---

**Registering for an Altera.com Account**

Your copy of the Quartus II software is registered at the time of purchase; however, in order to use the mySupport web site to view and submit service requests, you must also register for an Altera.com account. Although an Altera.com account is required only for using the mySupport web site, having an Altera.com account will also make it easier for you to use many other Altera web site features, such as the Download Center, Licensing Center, Altera Technical Training online class registration, or Buy On-Line-Altera eStore features.
To register for an Altera.com account, follow these steps:

1. Go to the mySupport web site:

   ✓ To start your web browser and connect to the mySupport web site while running the Quartus II software, choose **Altera on the Web > Quartus II Service Request** (Help menu).

   or

   ✓ Point your web browser to the mySupport web site at [www.altera.com/mysupport](http://www.altera.com/mysupport).

2. Follow the instructions on the mySupport web site to register for an Altera.com account.

   If you are not a current Altera subscription user, you can still register for an Altera.com account.
Starting the Quartus II Tutorial

The online tutorial introduces you to the features of the Quartus II design software. It shows you how to create and process your own logic designs quickly and easily. The modular design of the Basic and Optional tutorials allows you to choose the areas of the Quartus II software that you want to learn about:

- The Basic tutorial guides you through the steps required to create, compile, perform timing analysis on, simulate, and program a sample finite impulse response (FIR) filter design, called fir_filter.

- The Optional tutorial modules focus on topics such as making the transition from the MAX+PLUS II software, using the LogicLock™ feature, and using Stratix device features. You do not need to complete the Basic tutorial to begin any of the Optional tutorial modules.

To start the Quartus II tutorial after you have successfully installed the Quartus II software:

✓ Choose Tutorial (Help menu).

After you start the tutorial, the Quartus II window resizes to allow you to view the Tutorial window and the Quartus II software simultaneously.

You should be aware of the following information before you start the Quartus II tutorial:

- You must have installed support for Cyclone EP1C6 devices if you want to complete the Basic or LogicLock tutorial. In addition, you must have installed support for MAX II EPM570 and Stratix EP1S25 devices if you want to complete the Optional MAX+PLUS II Conversion and Stratix tutorial modules. If you did not install support for these devices, refer to “Installing the Quartus II Software” on page 4.

- The tutorial is designed for display online. However, if you want to print one or more of the tutorial modules, click the Printing Options button located at the beginning of each module and then click the link to open the appropriate printable version.
Using Quartus II Help

The Quartus II software includes a platform-independent Help system that provides comprehensive documentation for the Quartus II software and more details about the specific messages generated by the Quartus II software. You can view Help in one of the following ways:

- Press F1 from a highlighted menu command or active dialog box for context-sensitive help.
- Choose Index (Help menu) to view the Index tab. The Index lets you search for and display all Help topics related to a keyword or phrase.
- Choose Contents (Help menu) to view the Contents tab. The Contents outlines the design flow and groups related topics into folders, but does not list all the topics in Quartus II Help.
- Choose Search (Help menu) to perform a search with the Search tab. The Search finds a maximum of 500 topics containing the search keyword.
- Choose Messages (Help menu) to view the Messages list. The Messages list provides an alphabetical list of all messages and offers detailed Help on each message.
- Choose Glossary (Help menu) to view the Glossary list. The Glossary list provides definitions to key terminology in the Quartus II software.

Refer to “Help Menu Commands” and “Using Quartus II Help Effectively” in Quartus II Help for more information.

Getting Help on a Message

To view Help on an individual message, follow these steps:

1. In the Processing or System tab of the messages window, select the message on which you want to receive Help.
2. Choose Help (right button pop-up menu).
To view the entire alphabetical list of messages:

✓ Choose **Messages** (Help menu).

*or*

✓ Choose **Contents** (Help menu), and select **Messages List** from the end of the Contents.

## Using Context-Sensitive Help

To view context-sensitive help for a specific item:

✓ Press F1 from a highlighted menu command or active dialog box for context-sensitive help.

*or*

✓ Press Shift+F1 or choose the **Context-Sensitive Help** button on the toolbar. The pointer turns into a Help pointer. You can then point to a menu command or active window and click for context-sensitive help.

## Navigating Help

The Help window includes a **Contents** tab, **Index** tab, and **Search** tab that can help you navigate through thousands of Help topics.

## Using the Index Tab

To find and display a Help topic using the Index, follow these steps:

1. Choose **Index** (Help menu) or, if the Help window is already open, click the **Index** tab.
2. Type the entry you want to find in the **Type in the keyword to find** box.

3. In the list of keywords, select the entry or subentry.

   If the entry you are looking for refers to a cross-reference entry in parentheses that is preceded with `See` or `See also`, you can type that entry in the **Type in the keyword to find** box to locate additional topics.

4. To open the topic, click **Display** or double-click the entry.

---

**Using the Search Tab**

To search all topics in Quartus II Help for specific keywords, follow these steps:

1. Choose **Search** (Help menu) or, if the Help window is already open, click the **Search** tab.

2. Type the word or words that you want to find:
   
   - To find topics with adjacent words, type the words in double quotation marks. For example, “*this and that*” finds topics that contain the exact phrase “this and that.”
   
   - To find topics that contain the words, type the words without double quotation marks. For example, *this and that* finds topics that contain any combination of the words “this,” “and,” and “that.”

3. If necessary to narrow your search, select **AND**, **OR**, **NEAR**, or **NOT** from the list.

4. If necessary, turn on **Search previous results**, **Match similar words**, or **Search titles only**.

5. Click **List Topics**.

6. Select the topic you want to display.

7. Click **Display**.
Using the Contents Tab

To view groups of related topics, follow these steps:

1. Choose Contents (Help menu) or, if the Help window is already open, click the Contents tab.

2. Select the Help folder topic you want to view.

3. Click the + icon to expand the folder and view the names of individual Help topics.

4. Select the topic you want to display.

Printing Help Topics

To print Quartus II Help topics from the Contents tab, follow these steps:

1. In the Contents tab, select the Help folder or Help topic that you want to print.

2. Choose Print (right button pop-up menu).

   or

   Click the Print button on the toolbar.

3. Select the appropriate print option:

   – To print the selected topic, select Print the selected topic.

   – To print the selected folder and all the topics in the folder, select Print the selected heading and all subtopics.

4. Click OK.

You can also use the Print command or Print button to print any individual Help topic you are viewing.
Finding a Keyword in a Help Topic

To search for a keyword in an open Quartus II Help topic, follow these steps:

1. To open the Find dialog box, press Ctrl + F.
2. In the Find what box, type the search text.
3. If necessary, turn on one or both of the following options:
   - Match whole word only
   - Match case
4. In the Direction list, select a search direction.
5. Click Find Next.
6. If necessary, click Find Next again to find the next instance of the search text.
7. To end the search, click Cancel.

Viewing a Glossary Definition

To view the alphabetical glossary list:

✔ Choose Glossary (Help menu).

or

✔ Choose Contents (Help menu), and select Glossary List from the end of the Contents.
Quartus II File Organization

During the Quartus II software installation, two top-level directories are created:

- The `\altera\quartus<version number>` directory contains system software and data files and includes the subdirectories described in Tables 2 through 5.
- The `\altera\qdesigns<version number>` directory contains tutorial and sample files and includes the subdirectories described in Table 6.

The main `\altera\quartus<version number>` directory includes the subdirectories described in Table 2.

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>\bin</code></td>
<td>Contains the executable software program files. Also contains Tcl scripts to perform tasks in the Quartus II software and other EDA software.</td>
</tr>
<tr>
<td><code>\drivers</code></td>
<td>Contains drivers, including the following drivers:</td>
</tr>
<tr>
<td></td>
<td>- EthernetBlaster driver, which is required to use the EthernetBlaster download cable with an Ethernet port for Windows 2000 and Windows XP</td>
</tr>
<tr>
<td></td>
<td>- ByteBlaster driver, which is required to use the ByteBlaster II or ByteBlasterMV download cable with Windows NT, Windows 2000, and Windows XP</td>
</tr>
<tr>
<td></td>
<td>- USB-Blaster driver, which is required to use the USB-Blaster download cable with USB for Windows 2000 and Windows XP</td>
</tr>
<tr>
<td></td>
<td>- MasterBlaster USB driver, which is required to use the MasterBlaster communications cable with USB for Windows 2000 and Windows XP</td>
</tr>
<tr>
<td></td>
<td>- APU USB driver, which is required to use the APU with Windows 2000 and Windows XP</td>
</tr>
<tr>
<td></td>
<td>- Sentinel driver, which is required to use the Sentinel Software Guard with node-locked (single-user) licenses for Windows NT</td>
</tr>
</tbody>
</table>
The `altera\quartus<version number>\eda` directory includes the subdirectories described in Table 3.

### Table 3. Quartus II EDA Directory (eda) Structure

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\cadence</td>
<td>Contains technology libraries for Cadence EDA tools.</td>
</tr>
<tr>

Contacting Altera

You can contact Altera for technical support and product information.

Technical Support

If you need technical support, you can visit the Altera web site or the mySupport web site, or you can call the Altera Applications Department.

Altera web site:  
www.altera.com  
Includes the Altera Find Answers page, which is available from the Support Center section of the Altera web site at www.altera.com/answers.

mySupport web site:  
www.altera.com/mysupport  
or choose Altera on the Web > Quartus II Service Request (Help menu) in the Quartus II software. This web site allows you to submit, view, and update technical support service requests.

Telephone:  
(800) 800-EPLD  
(7:00 a.m. to 5:00 p.m. Pacific time, M–F)  
You will need your 6-digit Altera ID to access the hotline.

(408) 544-8767  
(7:00 a.m. to 5:00 p.m. Pacific time, M–F)

In order to use the mySupport web site to view and submit service requests, you must also register for an Altera.com account. An Altera.com account is required only for using the mySupport web site; however, having an Altera.com account will also make it easier for you to use many other Altera web site features, such as the Download Center, Licensing Center, Altera
Technical Training online class registration, or Buy On-Line- Altera eStore features. For more information, refer to “Registering for an Altera.com Account” on page 29.

Product Information

If you need the latest Altera product information or literature, go to the Literature section of the Altera web site at www.altera.com. You can also purchase printed sets of documentation from the Shop Altera web site at www.shopaltera.com.

Go to “Contacting Altera” in Quartus II Help for complete information on Altera technical support services.
