REVOLUTIONIZING COMPUTING
Intel SPG, or the Solutions Product Group, develops innovative products, not just the building blocks Intel is known for. SPG has given the world the Intel® NUC, a Mini PC that’s about 4-inches square, and the Intel® Compute Stick, a tiny PC that can fit in the palm of your hand. Now we’ve created the smallest, most amazing device yet: the Intel® Compute Card.
With Intel® brand processors and everything you need already built-in, the Intel® Compute Card is the new compute standard for smart devices and gives you the power of a PC in a system about the size of a credit card. The truly amazing thing is that this tiny device has a universal interface which allows it to be plugged into any host device with an Intel Compute Card slot—and that makes it easy to integrate compute and connectivity into everything.

“By simplifying the integration of compute and connectivity through a universal interface, OEMs and manufacturers can easily create devices that bring COMPUTING POWER to UNEXPECTED PLACES, without needing to know how to build compute power into their products.”

Revolutionary in size, form, and function, the Intel® Compute Card brings tremendous value to designers, OEMs, manufacturers, and customers. The card along with Intel design guides and reference designs make it easy to create new products with compute power, and the modular form factor makes it easy to integrate and upgrade devices, as well as manage malfunctioning systems.
At Intel, we deliver you a choice of systems so you can create the exact experience you want. With systems built on a range of Intel processors from Intel® Celeron® to 7th generation Intel® Core™ processors, and Intel® SSDs and Intel® wireless, you know you’re getting the best of Intel built into a tiny device once thought unimaginable.
The Intel® Compute Card dock can be used to create a mini-PC for home or businesses—simply plug the card in, hook up an HDMI® display and peripherals to the USB 3.0 ports, and you’ve got an amazing modular system that you can easily take with you. The dock can also be integrated into products, greatly simplifying the design of a new product, with the same end result—powerful, more intelligent modular products that are easy to upgrade and service.

The Intel® Compute Card brings tremendous benefits to designers, OEMs, manufacturers, Intel channel partners, and retailers. Whether it’s creating new products, developing new markets, or enabling new business models, the Intel Compute Card lets you focus on your customers and create solutions unique to your market.
We are developing a wide ecosystem of third-party vendors who are creating products that will be based on the Intel® Compute Card. These include displays, televisions, intelligent whiteboards, and interactive appliances.
