

# INTEL UNITE® FOR SMALL BUSINESS

## Help Your Customers Collaborate More Effectively

Enable meeting participants who are locally or remotely connected to the same workplace network to wirelessly share their screens to the room display and other connected participants.

**Installation is simple.** Outfit up to five meeting spaces with qualified mini PCs running the Intel Unite® software for hubs. Once they are connected to both the network and a room display, the rooms are ready to host.

**Sharing is fast and easy.** With Intel Unite® software for Windows\* or Mac\* clients, participants can share their screens in a matter of seconds by following three simple steps:

1 LAUNCH THE INTEL UNITE® APPLICATION

2 ENTER PIN ON ROOM DISPLAY

3 WIRELESSLY SHARE TO ROOM AND WITH CONNECTED PARTICIPANTS

**Meetings are wire-free and hassle-free.** No more passing cables. No more tethering presenters to one spot. And no more late meeting starts because of cable and dongle hassles.

**Calling in from outside the room? No problem.** As long as participants have a connection to the same network and have the PIN to join, they can connect to the meeting and view or share content.

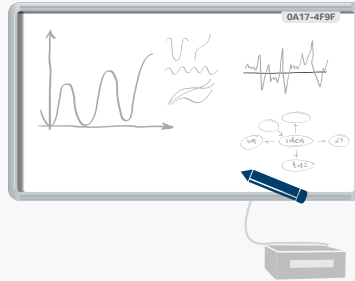

# PROVIDE A GREAT EXPERIENCE AND DISCOVER NEW REVENUE OPPORTUNITIES

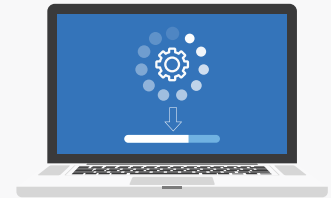

## Setting up for your small business customers is simple.

It all starts with an enabled mini desktop PC, also known as a room “hub”, featuring an Intel® Core™ vPro™ processor and Windows\* 10<sup>1</sup>. It is as easy as connecting the mini PC to the network and a room display, loading the Intel Unite® software, and installing the software on all PCs and Macs<sup>2</sup>.

## Help customers get more out of their investment.

Intel Unite® software can be configured to run in the background while other applications, such as digital signage or whiteboard software applications, run in the foreground. The PIN is always present, so just enter the displayed PIN to take over the screen.

## Make the most of new revenue opportunities.

Get more out of your Intel Unite® solution sales experience through additional income opportunities like installation, deployment, initial configuration and training fees. For installations spanning multiple sites, network assessment and readiness may also be necessary.

## UPGRADE FROM SMALL BUSINESS TO ENTERPRISE APPLICATION

For IT-managed business or education environments, or environments with more than five meetings spaces, the enterprise installation of the Intel Unite® solution is always recommended. Customers can easily upgrade from the small business installation to the enterprise installation using the same room hardware and adding a server software component.
