

MICROCODE REVISION GUIDANCE

JULY 13 2018

MCU RECOMMENDATIONS

The following table provides details of availability for microcode updates currently planned by Intel. Changes since the previous version are highlighted in yellow.

LEGEND:

Production Status:

- Beta – Intel has released this production signed MCU under NDA for all customers to validate.
- Production – Intel has completed all validation and is authorizing customers to use this MCU in a production environment.

‡‡‡ - This MCU has been reverted to a previous version while Intel investigates a sighting related to this MCU. This error is currently under investigation and no workaround has been identified. Intel currently is recommending to stop deployment of version 0x26 and revert to the previous production version 0x22. Intel will provide an update on progress in 2 weeks.

Intel may make changes to specifications and product descriptions at any time, without notice.

All products, dates, and figures specified are preliminary based on current expectations, and are subject to change without notice.

Intel, processors, chipsets, and desktop boards may contain design defects or errors known as errata, which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Performance varies depending on system configuration. No computer system can be absolutely secure. Check with your system manufacturer or retailer or learn more at <http://intel.com>.

Some results have been estimated or simulated using internal Intel analysis or architecture simulation or modeling, and provided to you for informational purposes. Any differences in your system hardware, software or configuration may affect your actual performance.
