Intel® NUC Mini PCs Support the Rapid Rollout of COVID-19 Testing Centers

Amidst the largest health crisis in generations, health authorities in the North-Rhine Westphalia region of Germany enlisted the help of Intel, Tarox and four other tech collaborators to supply the IT infrastructure necessary to process patients at testing centers - fast. The standards-based architecture that the Intel® NUC Mini PC is built on means easier data integration and collaboration – essential for a project of this type. Once a complete solution was agreed upon, the Intel NUC, pre-imaged with all necessary medical software and bundled with peripherals was supplied to 110 new test centers within 3 days.
